The Tax Foundation's State
Business Tax Climate Index

enables business leaders, government policymakers, and taxpayers to gauge how their states' tax systems compare. While there are many ways to show how much is collected in taxes by state governments, the Index is designed to show how well states structure their tax systems, and provides a roadmap to improving these structures.

Industry 4.0 for SMEs John Wiley & Sons

This open access book explores the

concept of Industry 4.0, which presents a considerable challenge for the production and service sectors.

While digitization initiatives are usually integrated into the central corporate strategy of larger companies, smaller firms often have problems putting Industry 4.0 paradigms into practice. Small and

medium-sized enterprises (SMEs) possess neither the human nor financial resources to systematically investigate the potential and risks of introducing Industry 4.0.

Addressing this obstacle, the international team of authors focuses on the development of smart manufacturing concepts, logistics

solutions and managerial models specifically for SMEs. Aiming to provide methodological frameworks and pilot solutions for SMEs during their digital transformation, this innovative and timely book will be of great use to scholars researching technology management,

digitization and small business, as well as practitioners within manufacturing companies.

Research Methods for Political Science CRC Press

Wave Propagation and Group Velocity contains papers on group velocity which were published during the First World War and are missing in many libraries. It introduces three different definitions of velocities: the group velocity of Lord Rayleigh, the signal velocity of Sommerfeld, and the velocity of energy transfer,

which yields the rate of energy flow through a continuous wave and is strongly related to the characteristic impedance. These three velocities are identical for nonabsorbing media, but they differ considerably in an absorption band. Some examples are discussed in the last chapter dealing with guided waves, and many other cases of application of these definitions are quoted. These problems have come again into the foreground, in connection with the propagation of radio signals and radar. Reflection in the Heaviside layers requires a real knowledge of all these different definitions. Group

velocity also plays a very important role in wave mechanics and corresponds to the speed of a particle. The present book should be very useful to physicists and radio engineers and should give them a good basis for new discussions and applications.

The third edition of *Research Methods for Political Science* retains its effective approach to helping students learn what to research, why to research and how to research. The text integrates both quantitative and qualitative approaches to research in one volume and covers such

important topics as research design, specifying research problems, designing questionnaires and writing questions, designing and carrying out qualitative research and analyzing both quantitative and qualitative research data. Heavily illustrated, classroom tested, exceptionally readable and engaging, the text presents statistical methods in a conversational tone to help students surmount "math phobia." Updates to this new edition include: Research topics chapters have been upgraded and expanded. Two mixed methods design chapters have been added. A new chapter on hermeneutic analysis designs and research with

large data sets. The chapter on multivariate statistics has been expanded, with an expanded discussion on logistic regression. Tools on how to prepare and present research findings are now featured in the appendix, allowing instructors more flexibility when teaching their courses. *Research Methods for Political Science* will give students the confidence and knowledge they need to understand the methods and basics skills for data collection, presentation and analysis. Proteomics by means of mass spectrometry has rapidly changed the way that we analyze proteomes. Gel-Free

Proteomics: Methods and Protocols addresses contemporary methods for gel-free proteome research with a special focus on differential analysis and protein modifications. Divided into twenty-five chapters, this detailed volume meticulously describes vital procedures needed to perform gel-free proteomics, ranging from sample preparation, isotope labeling for differential proteomics, enrichment technologies for modified proteins and peptides, and bioinformatics. Written in the successful Methods in Molecular Biology™ series

format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible protocols, and notes on troubleshooting and avoiding known pitfalls. Authoritative and easily accessible, Gel-Free Proteomics: Methods and Protocols serves as a timely resource for both professionals and novices pursuing research in this critical field. level Enterprise Systems courses. An approach to understanding and implementing ERP systems for success in today ' s organizations. Motiwalla teaches students the components of an ERP system, and the process of implementing ERP systems within a corporation to increase the overall success of the organization. This text also places major importance on the strategic role of ERP systems in providing a platform for improved business operations and productivity. The second edition reflects the nature of today ' s enterprise systems. Vehicle Noise and Vibration

Many challenges confront the rubber technologist in the development, manufacture, and use of rubber products. These challenges include selecting and combining materials to form rubber compounds suitable for processing, successfully operating a range of manufacturing equipment, and meeting product performance in difficult and diverse environments. Case studies and literature references relate problem solutions to the everyday experience of the rubber technologist. From materials to processes to products, this book identifies many different rubber-related problems and suggests approaches to solve them.

Marten Hofker and Jan van Deursen have assembled a multidisciplinary collection of readily reproducible methods for working with mice, and particularly for generating mouse models that will enable us to better understand gene function. Described in step-by-step detail

by highly experienced investigators, these proven techniques include new methods for conditional, induced knockout, and transgenic mice, as well as for working with mice in such important research areas as immunology, cancer, and atherosclerosis. Such alternative strategies as random mutagenesis and viral gene transduction for studying gene function in the mouse are also presented.

With the changing landscape of the transport sector, there are also alternative powertrain systems on offer that can run independently of or in conjunction with the internal combustion (IC) engine. This shift has actually helped the industry gain traction with the IC Engine market projected to grow at 4.67% CAGR during the forecast period 2019-2025. It continues to meet both requirements and challenges through continual technology advancement and innovation from the latest research. With this in mind, the contributions in Internal Combustion Engines and Powertrain Systems for Future Transport 2019 not only cover the

particular issues for the IC engine market but also reflect the impact of alternative powertrains on the propulsion industry. The main topics include:

- Engines for hybrid powertrains and electrification
- IC engines
- Fuel cells
- E-machines
- Air-path and other technologies achieving performance and fuel economy benefits
- Advances and improvements in combustion and ignition systems
- Emissions regulation and their control by engine and after-treatment
- Developments in real-world driving cycles
- Advanced boosting systems
- Connected powertrains (AI)
- Electrification opportunities
- Energy conversion and recovery systems
- Modified

or novel engine cycles

- IC engines for heavy duty and off highway Internal Combustion Engines and Powertrain Systems for Future Transport 2019 provides a forum for IC engine, fuels and powertrain experts, and looks closely at developments in powertrain technology required to meet the demands of the low carbon economy and global competition in all sectors of the transportation, off-highway and stationary power industries.

Though the deep interior of the Earth (and other terrestrial planets) is inaccessible to humans, we are able to combine

observational, experimental and computational (theoretical) studies to begin to understand the role of the deep Earth in the dynamics and evolution of the planet. This book brings together a series of reviews of key areas in this important and vibrant field of studies. A range of material properties, including phase transformations and rheological properties, influences the way in which material is circulated within the planet. This circulation re-distributes key materials such as volatiles that affect the pattern of materials circulation. The understanding of deep Earth structure and

dynamics is a key to the understanding of evolution and dynamics of terrestrial planets, including planets orbiting other stars. This book contains chapters on deep Earth materials, compositional models, and geophysical studies of material circulation which together provide an invaluable synthesis of deep Earth research. Readership: advanced undergraduates, graduates and researchers in geophysics, mineral physics and geochemistry. Industrial Chocolate Manufacture and Use Springer Nature This book constitutes the refereed proceedings of the 4th

International Conference on Interactive Collaborative Robotics, ICR 2019, held in Istanbul, Turkey, in August 2019. The 32 papers presented in this volume were carefully reviewed and selected from 46 submissions. They deal with challenges of human-robot interaction; robot control and behavior in social robotics and collaborative robotics; and applied robotic and cyber-physical systems. The Word Rhythm Dictionary Humana Press Recovery Rising is the professional memoir of William White, who, over the span of five decades, evolved through several diverse roles to emerge as the addiction field's preeminent

historian and one of its most visionary voices and prolific writers. Recovery Rising contains the stories, reflections, and lessons learned within one man's personal and professional journey. Recounted here are many of the ideas, methods, people, and organizations that shaped the modern history of addiction treatment and recovery. These engaging stories are at times poignant and at times humorous, but always revealing, informative, and inspiring. William White's peers will find their life's work affirmed in these pages and a younger generation of addiction

professionals and recovery advocates will feel the passing of a torch.

Deep River and Ivoryton, two villages in the lower Connecticut River Valley, were dominated for more than a century by "white gold"-ivory. The growth of the piano industry led to a new use for this exotic and long-treasured substance and, suddenly, the two villages became tied to Zanzibar, the most important exporting place for the tusks of African elephants. With more than

two hundred exceptional photographs and narrative, Deep River and Ivoryton tells the story of how ivory shaped the economy and culture of these villages. Two companies, Pratt, Read & Company and the Comstock, Cheney & Company, employed thousands of people in satisfying the demand for new pianos. Probably more than ninety percent of the ivory processed in this country was handled in Deep River and Ivoryton. The demand for new instruments slowed with the invention of the radio,

followed by the Great Depression of the 1930s, and the flow of material stopped altogether in the 1950s, when the use of ivory in the United States was banned.

In our complex, fast changing society, health is strongly influenced by the continuously changing interactions between organisations and their employees. Three major fields contribute to health-oriented improvements of these interactions: occupational health, organizational health and public health. As currently only

partial links exist amongst these fields, the book aims to explore potential synergies more systematically. Considering the high mental and social demands in a service and knowledge sector economy, the first part of the book focuses on work-related psychosocial factors. As a large proportion of inequalities in health in developed countries can be explained by inequalities in working conditions, those psychosocial factors with a particularly high public health impact are highlighted. As addressing these psychosocial factors requires to involve the organization as the key change

agent, the second part covers approaches to improve public health through organizational level health interventions. The last section takes a look into the future of occupational, organizational and public health: what are the future challenges regarding occupational health and how can they be tackled within and beyond the organizational level. Overall, this integrating book will help to broaden the evidence-base, legitimacy and efficacy of occupational- and organizational level health interventions and thus increase their public health impact.

If you ask candidates and campaign strategists for the keys to a successful campaign, they say logistics like fundraising, poll numbers, and grassroots. These answers aren't wrong, but they overlook an equally important ingredient to victory: making an emotional connection with voters. If voters don't connect with you, they won't vote for you. Our brains are hardwired to bond with others through stories and nonverbal cues. Yet, when many candidates

hit the campaign trail, they too often emphasize data and policy, which leaves voters unmoved. In *The Candidate's 7 Deadly Sins*, Dr. Peter A. Wish teaches tested strategies that gain candidates the critical advantage over their opponents. He outlines the sins to avoid--being pessimistic, canned, tentative, reactive, cerebral, partisan, and arrogant--and provides a road map for turning each sin into a winning virtue. Dr. Wish draws on past and current case studies of political winners and losers, cutting-edge neuroscience, and his experience working with candidates and campaign teams. Wish found that candidates who connect emotionally with voters don't just win their hearts and minds--they win elections.
