Palaeopathology is
designed to help
bone specialists

with diagnosis of
diseases in skeletal
assemblages. It
suggests an
innovative method of
arriving at a
diagnosis in the
skeleton by applying
what are referred to
as 'operational
definitions'. The aim
is to ensure that all
those who study bones
will use the same
criteria for

diagnosing disease, which will enable valid comparisons to be made between studies. This book is based on modern clinical knowledge and provides background information so that those who read it will understand the natural history of bone diseases, and this will enable them to draw reliable conclusions from their observations. Details of bone metabolism and the fundamentals of basic pathology are also provided, as well as a comprehensive and up-to-date bibliography. A short chapter on epidemiology provides information on how best to analyze and

present the results of a study of human remains.

Includes a foreword by Major General David A. Rubenstein. From the editor: "71F, or "71 Foxtrot," is the AOC (area of concentration) code assigned by the U.S. Army to the specialty of Research Psychology. Qualifying as an Army research psychologist requires, first of all, a Ph.D. from a research (not clinical) intensive graduate psychology program. Due to their advanced education, research psychologists receive a direct commission as Army officers in the Medical Service Corps at the rank of captain. In terms of numbers, the 71F AOC is a small one, with only 25 to 30 officers serving in any given year. However, the 71F impact is much bigger than this small cadre suggests. Army research psychologists

apply their extensive training and expertise in the science of psychology and social behavior toward understanding, preserving, and enhancing the health, well being, morale, and performance of Soldiers and military families. As is clear throughout the pages of this book, they do this in many ways and in many areas, but always with a scientific approach. This is the 71F advantage: applying the science of psychology to understand the human dimension, and developing programs, policies, and products to benefit the person in military operations. This book grew out of the April 2008 biennial conference of U.S. Army Research Psychologists, held in Bethesda, Maryland. This meeting was to be my last as Consultant to the Surgeon General for Research Psychology, and I thought it would be a good idea to publish proceedings, which

had not been done before. As Consultant, I'd often wished for such a document to help explain to people what it is that Army Research Psychologists "do for a living." In addition to our core group of 71Fs, at the Bethesda 2008 meeting we had several brand-new members, and a number of distinguished retirees, the "grey-beards" of the 71F clan. Together with longtime 71F colleagues Ross Pastel and Mark Vaitkus, I also saw an unusual opportunity to capture some of the history of the Army Research Psychology specialty while providing a representative sample of current 71F research and activities. It seemed to us especially important to do this at a time when the operational demands on the Army and the total force were reaching unprecedented levels, with no sign of easing, and with the Army in turn relying more heavily on research psychology to inform its programs for

protecting the health, well being, and performance of Soldiers and their families." *The Experience of Modernity* MotorBooks International Swapping or interchanging parts is a time-honored practice, and this book is the source for Chevrolet parts interchanges.

Why have so many central and inner cities in Europe, North America and Australia been so radically revamped in the last three decades, converting urban decay into new chic? Will the process continue in the twenty-first century or has it ended?

What does this mean for the people who live there? Can they do anything about it? This book challenges conventional wisdom, which holds gentrification to be the simple outcome of new middle-class tastes and a demand for urban

living. It reveals gentrification as part of a much larger shift in the political economy and culture of the late twentieth century.

Documenting in gritty detail the conflicts that gentrification brings to the new urban 'frontiers', the author explores the interconnections of urban policy, patterns of investment, eviction, and homelessness. The failure of liberal urban policy and the end of the 1980s financial boom have made the end-of-the-century city a darker and more dangerous place.

Public policy and the private market are conspiring against minorities, working people, the poor, and the homeless as never before. In the emerging revanchist city, gentrification has become part of this policy of revenge.

This unique book provides a guide to the selection of appropriate production and manufacturing methods for

postgraduate and professional manufacturing engineers. It starts by helping the reader to identify the required objectives of industrial management for their particular situation. Having identified the objectives an analytical assessment of the available production and management methods is made. The analytical system presents an objective method of production selection. For example, this practical book will help the reader to decide whether or not a local Just-in-Time process is needed or a full chain JIT method is needed. Alternatively the problem may be deciding between set-up time reduction or changeover time reduction. Should TQM be ceded to PCIs? This book covers nearly all methods of production and manufacturing and will prove

the most comprehensive guide to choosing and using these methods. Only book of its kind available Widest coverage of methods available Analytical approach to decision making

This book takes an extensive look at the many different types of users and cultures that comprise the popular social media platform Tumblr. Though it does not receive nearly as much attention as other social media such as Twitter or Facebook, Tumblr and its users have been hugely

influential in creating and shifting popular culture, especially progressive youth culture, with the New York Times referring to 2014 as the dawning of the “ age of Tumblr activism. ” Perfect for those unfamiliar with the platform as well as those who grew up on it, this volume contains essays and artwork that span many different topics: fandom; platform structure and design; race, gender and sexuality, including queer and trans identities; aesthetics; disability and mental health; and social media privacy and ethics. An entire generation of young people that is now beginning to influence mass culture and politics came of age on Tumblr, and this volume is an indispensable guide to the many ways this platform works.

Attempting to bridge the gap
between specialised scholarship
in the humanistic disciplines
and an interdisciplinary project
of cultural analysis, Mieke Bal

has written an intellectual travel
guide that charts the course
'beyond' cultural studies. As
with any guide, it can be used in
a number of ways and the reader
can follow or willfully ignore any
of the paths it maps or signposts.
Bal's focus for this book is the
idea that interdisciplinarity in
the humanities - necessary,
exciting, serious - must seek its
heuristic and methodological
basis in concepts rather than its
methods. Concepts are not grids
to put over an object. The
counterpart of any given
concept is the cultural text or
work or 'thing' that constitutes
the object of analysis. No
concept is meaningful for
cultural analysis unless it helps
us to understand the object
better on its own terms. Bal
offers the reader a sustained
theoretical reflection on how to
'do' cultural analysis through a
tentative practice of doing just
that. This offers a concrete
practice to theoretical
constructs, and allows the

proposed method more accessibility. Please note: illustrations have been removed from the ebook at the request of the rightsholder.

This text aims to present and discuss the innovative Volvo Uddevalla plant, comparing it to other plants - Japanese lean ones and others. The starting point for the book is Volvo's dramatic decision to close its Uddevalla and Kalmar plants, and the debate that followed this decision, both in Sweden and abroad. Both plants were pioneers of the possibilities to unite productivity and the good work, but, following the announcement of their closure, researchers and practitioners in the field of industrial organization from many countries asked why they closed, how they

compared with other production concepts, and whether we now see an end of an alternative to Japanese lean production.

A foundational work on historical and social studies of quantification

What accounts for the prestige of quantitative methods? The usual answer is that quantification is desirable in social investigation as a result of its successes in science.

Trust in Numbers questions whether such success in the study of stars, molecules, or cells should be an attractive model for research on human societies, and examines why the natural sciences are highly quantitative in the first place.

Theodore Porter argues that a better understanding of the attractions of quantification in business, government, and social research brings a fresh perspective to its role in psychology, physics, and medicine. Quantitative rigor is not inherent in science but arises from political and social pressures, and objectivity derives its impetus from cultural contexts. In a new preface, the author sheds light on

the current infatuation with quantitative methods, particularly at the intersection of science and bureaucracy.

ONE COMFORTABLE fact gleaned from travel in far countries was that regardless of race, creed or inner metabolisms, mankind has always created varying forms of stimulant liquid—each after his own kind.

Prohibitions and nations and kings depart, but origin of such pleasant fluid finds

constant source. Fermentation and the art of distilling liquors over heat became good form about the time our hairy forefathers began sketching mastodon and sabretooth tiger on their cave foyers. Elixir of fruit juice, crushed root and golden honey date back to the dawn of time and far beyond the written word, to when the old gods were young and stalked abroad upon business with goddesses, when Pan piped the dark forest aisles and Centaurs pawed belly deep in fern. The Phoenicians, the Pharaohs, the first agrarian Chinese, all ancient races on earth buried jars of wine or spirits with their dead alongside the money and food and weapons and wives, so the departed might find reasonable comfort and happiness in the hereafter. Go to Africa and the poorest Kaffir cheers life

with—and for all of us he can
have it—warm millet beer.
We just returned from
Mexico and can affirm that
our Yucatecan most certainly
ripped the bud out of his
Agave Americana and drank
the fermented pulque—a fluid
which tastes faintly like
mildewed
donkeys—centuries before
Montezuma ’ s parents
journeyed southward to the
Valley of Cortez. We found
additional evidence after three
voyages to Zamboanga in
Philippine Mindanao—where
the monkeys have no
tails—that the more agile
Moro shinnied up his
cocopalms and slashed the
flower bud with his bolo;
caught the saccharine
drip—and an astounding
menagerie of assorted squirt-
ants—in a fermentation joint
of bamboo, long before the
Spanish Inquisition or
Admiral Dewey steamed into
Manila Bay. In Samoa the
loveliest tribal virgin chews
the kava root for the
ceremonial bowl when your
yacht sails into her lagoon,
and the resultant fluid
furnishes a sure ticket to
amiable paralysis of the lower
limbs. China and Japan have
for centuries had their rice
wine and saki. The Russian
made his vodka from cereals,
the blond Saxon his honey
mead, the Hawaiian his
okolehao from roots or fruits.
We ’ ve been often to the
Holy Land and have flown
across to Transjordan and
the rose-red city of Petra, and
can bear witness that those
grapes Moses the Lawgiver
found in the Promised Land
weren ’ t all of a type suitable
for raisins. To any reasonable
mind this past and present
testimony of mankind
through the ages would

indicate that some sort of fluid social intercourse. And it is routine will continue for many centuries to come. With adventurers like Marco Polo, Columbus, Tavernier and Magellan, there was a vast national introduction and interchange of beverages. For better or worse both conquistador and native sampled, discarded or adapted an incredible addition of liquid blends and formulae. Through rigour or amiability of climate, through physical, racial and psychological characteristics of the individuals themselves, from the cocoon of this pristine field work there emerged an equally incredible list of drinks—mixed or otherwise—which for one reason or another have stood the test of time and taste and gradually have become set in form. They have become traditional, accepted in ethical

with the more civilized family of these that we are concerned in this volume; not the pulques and warm mealie beer or fermented Thibetan yak milk.
