The Code of Hammurabi is a well-preserved Babylonian law code of ancient Mesopotamia, dating back to about 1754 BC. It is one of the oldest deciphered writings of significant length in the world. The sixth Babylonian king, Hammurabi, enacted the code, and partial copies exist on a man-sized stone stele and various clay tablets. The Code consists of 282 laws, with scaled punishments, adjusting "an eye for an eye, a tooth for a tooth" (lex talionis) as graded depending on social status, of slave versus free man. Nearly one-half of the Code deals with matters of contract, establishing, for example, the wages to be paid to an ox driver or a surgeon. Other provisions set the terms of a transaction, establishing the liability of a builder for a house that collapses, for example, or property that is damaged while left in the care of another. A third of the code addresses issues concerning household and family

relationships such as inheritance, divorce, paternity, and sexual behavior. Only one provision appears to impose obligations on an official; this provision establishes that a judge who reaches an incorrect decision is to be fined and removed from the bench permanently. A few provisions address issues related to military service. Hammurabi ruled for nearly 42 years, c. 1792 to 1750 BC according to the Middle chronology. In the preface to the law, he states, "Anu and Bel called by name me, Hammurabi, the exalted prince, who feared Marduk, the patron god of Babylon (The Human Record, Andrea & Overfield 2005), to bring about the rule in the land." On the stone slab there are 44 columns and 28 paragraphs that contained 282 laws. The laws follow along the rules of 'an eye for an eye'.

Outsiders have long attributed
to the Middle East, and
especially to ancient Egypt,
meanings that go way beyond
the rational and observable.
The region has been seen as
the source of civilization,
religion, the sciences and the
arts; but also of mystical
knowledge and outlandish
theories, whether about the
Lost City of Atlantis or
visits by alien beings. In his
exploration of how its past
has been creatively
interpreted by later ages,
Robin Derricourt surveys the
various claims that have been
made for Egypt - particularly
the idea that it harbours an
esoteric wisdom vital to the
world's survival. He looks at
'alternative' interpretations
of the pyramids, from maps of
space and time to landing
markers for UFOs; at images of
the Egyptian mummy and at the
popular mythology of the
'pharaoh's curse'; and at
imperialist ideas of racial
superiority that credited
Egypt with spreading
innovations and inventions as
far as the Americas, Australia
and China. Including arcane
ideas about the Lost Ten
Tribes of biblical Israel, the
author enlarges his focus to
include the Levant. His book is
the first to show in depth how
ancient Egypt and the
surrounding lands have so

continuously and seductively tantalised the Western imagination.

In this seminal work, published by the C.I.A. itself, produced by Intelligence veteran Richards Heuer discusses three pivotal points. First, human minds are ill-equipped ("poorly wired") to cope effectively with both inherent and induced uncertainty. Second, increased knowledge of our inherent biases tends to be of little assistance to the analyst. And

lastly, tools and techniques that apply higher levels of critical thinking can substantially improve analysis on complex problems.

Petroleum Related Rock Mechanics Holt McDougal War, the most profitable economic activity in the ancient world, transferred

wealth from the vanquished to the victor. Invasions, sieges, massacres, annexations, and mass deportations all redistributed property with dramatic consequences for kings and commoners alike. No conqueror ever captured more people or property in so short a lifetime than Alexander the Great in the late fourth century BC. For all its savagery, the creation of Alexander's empire has generally been hailed as a positive economic event for all concerned. Even those harshly critical of Alexander today tend to praise his plundering of Persia as a means of liberating the moribund resources of the East. To test this popular interpretation, *The Treasures of Alexander the Great* investigates the kinds and quantities of treasure seized by the Macedonian king, from gold and silver to land and slaves. It reveals what became of the king's wealth and what Alexander's redistribution of these vast resources can tell us about his much-disputed policies and personality. Though Alexander owed his vast fortune to war, battle also distracted him from competently managing his spoils and much was wasted, embezzled, deliberately destroyed, or idled unprofitably. *The Treasures of Alexander the Great* provides a long-overdue and accessible account of Alexander's wealth and its enormous impact on the ancient world.

National Geographic Explorer and TED Prize-winner Dr. Sarah Parcak welcomes you to the exciting new world of space archaeology, a growing field that is sparking extraordinary discoveries from ancient civilizations across the globe. In *Archaeology from Space*, Sarah Parcak shows the evolution, major discoveries, and future potential of the young field of satellite archaeology. From surprise advancements after the declassification of spy photography, to a new map of the mythical Egyptian city of Tanis, she shares her field's biggest discoveries, revealing why space

archaeology is not only exciting, but urgently essential to the preservation of the world's ancient treasures. Parcak has worked in twelve countries and four continents, using multispectral and high-resolution satellite imagery to identify thousands of previously unknown settlements, roads, fortresses, palaces, tombs, and even potential pyramids. From there, her stories take us back in time and across borders, into the day-to-day lives of ancient humans whose traits and genes we share. World History Holt McDougal

In a series of exquisite close readings of Arabic and Arab Jewish writing, Jeffrey Sacks considers the relation of poetic statement to individual and collective loss, the dispossession of peoples and languages, and singular events of destruction in the nineteenth, twentieth, and twenty-first centuries. Addressing the work of Mahmoud Darwish, Ahmad Faris al-Shidyaq, Elias Khoury, Edmond Amran El Maleh, Shimon Ballas, and Taha Husayn, Sacks demonstrates the reiterated incursion of loss into the time of life-losses that language declines to mourn. Language occurs as the iteration of loss, confounding its domestication in the form of the monolingual state in the Arabic nineteenth century's fallout. Reading the late lyric poetry of the Palestinian poet

Mahmoud Darwish in relation to the destruction of Palestine in 1948, Sacks reconsiders the nineteenth century Arabic nahda and its relation to colonialism, philology, and the European Enlightenment. He argues that this event is one of catastrophic loss, wherein the past suddenly appears as if it belonged to another time. Reading al-Shidyaq's al-Saq 'ala al-saq (1855) and the legacies to which it points in post-1948 writing in Arabic, Hebrew, and French, Sacks underlines a displacement and relocation of the Arabic word adab and its practice, offering a novel contribution to Arabic and Middle East Studies, critical theory, poetics, aesthetics, and comparative literature. Drawing on writings of Jacques Derrida, Walter Benjamin, Avital Ronell, Judith Butler, Theodor Adorno, and Edward W. Said, Iterations of Loss shows that language interrupts its pacification as an event of aesthetic coherency, to suggest that literary comparison does not privilege a renewed giving of sense but gives place to a new sense of relation.

Since the days of the Ancient Greeks, history has been perceived as the academic study of the past. Unfortunately, it has generally been taught as a litany of rigid, boring facts intended to be accepted rather than questioned. This has been reinforced for decades by weighty textbooks that overwhelm the reader with mind-numbing details presented in a chronological sequence. The end result is that students see little relevance of what they learn in history class to the real world, and many simply struggle to stay awake.

Compared to other subjects taught at the secondary level, history is frequently judged to be the most boring. This is largely because it is viewed as an intellectually lifeless subject that presents few opportunities for active engagement. Questioning History is a book built around 16 essential questions designed to challenge this common assumption. Each question is broad, open-ended and subject to vigorous debate. By examining the historical background behind each question and by analyzing the ways in

which the question can be answered, the reader will come away with a deeper understanding of the past and a new appreciation for history as a cognitively dynamic subject. In addition, by using each chapter as a platform for engaging discussions and Socratic seminars, the reader will be able to refine the decision-making skills necessary for effective citizenship in a democratic society. Depending on the classroom or the setting in which it is being used, Questioning History can either take the place of the more traditional textbook or at least be used as a supplement to make it come more alive. The best way to learn and to appreciate a subject is through active engagement. Questioning History provides a shot of adrenalin to the study of history.

World Geography Today Penguin
Experimental Fluid Mechanics, Second Edition, discusses the fundamental concepts of fluid mechanics. The book begins with a discussion of the use of dimensional analysis, in particular the way in which it can be used to relate the results of model tests to flows at full scale. A chapter on wind tunnels follows; because tunnels and other test rigs with similar features are the basic test facilities of laboratory fluid mechanics, and because most of the physical and mathematical features of the subject are well illustrated by the flow in wind tunnels. Subsequent chapters discuss techniques of measurements—fluid

velocity and shear stress measurements, pressure measurements, force and position measurements, and flow visualization; the conduct of experiments and the writing of reports; and the last chapter is a survey of specialized branches of fluid mechanics. This book is intended for students of the theory of fluid mechanics, who must also learn about the physical situations which the theory represents, and especially for those who contemplate specializing in the experimental side of the subject rather than the theoretical side.
