## **Biology: Principles and Explorations**

McDougal Littell

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and

everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

Modern Biology Holt McDougal Includes 18 competencies/skills found on the GACE Biology test and 150 sample-test questions. This guide, aligned specifically to standards prescribed by the Georgia Professional Standards Commission, covers the sub-areas of Cell Structure and Processes; Heredity and Evolution; Characteristics of Organisms; Ecosystems; and Characteristics of Science.

Study Guide for Solomon/Berg/Martin's Biology  
McDougal Littell

This study guide is designed to help students learn to use science skills to solve biological problems, learn to apply knowledge about biology in their own lives, and learn to communicate with others about biology. The activities in this guide use information related to each chapter in the 1987 BSCS Green Version textbook. Students can use the activities before, during, or after their study of the chapter. There are 99 activities and exercises related to the 25 chapters of the textbook. These paper-and-pencil activities direct students to make observations,

collect data from research sources, draw models and diagrams, and interpret and draw graphs. This teacher's edition provides possible student responses. (CW)
