A People's Curriculum for the Earth is a collection of articles, role plays, simulations, stories, poems, and graphics to help breathe life into teaching about the environmental crisis. The book features some of the best articles from Rethinking Schools magazine alongside classroom-friendly readings on climate change, energy, water, food, and pollution—as well as on people who are working to make things better. A People's Curriculum for the Earth has the breadth and depth of Rethinking Globalization: Teaching for Justice in an Unjust World, one of the most popular books we've published. At a time when it's becoming increasingly obvious that life on Earth is at risk, here is a resource that helps students see what's wrong and imagine solutions. Praise for A People's Curriculum for the Earth "To really confront the climate crisis, we need to think differently, build differently, and teach differently. A People's Curriculum for the Earth is an educator's toolkit for our times." — Naomi Klein, author of The Shock Doctrine and This Changes Everything: Capitalism vs. the Climate "This volume is a marvelous example of justice in ALL facets of our lives—civil, social, educational, economic, and yes, environmental. Bravo to the Rethinking Schools team for pulling this collection together and making us think more holistically about what we mean when we talk about justice." — Gloria Ladson Billings, Kellner Family Chair in Urban Education, University of Wisconsin-Madison "Bigelow and Swinehart have created a critical resource for today's young people about humanity's responsibility for the Earth. This book can engender the shift in perspective so needed at this point on the clock of the universe." — Gregory Smith, Professor of Education, Lewis & Clark College, co-author with David Sobel of Place- and Community-based Education in Schools

Science, engineering, and

technology permeate nearly every

facet of modern life and hold the

key to solving many of humanity's

most pressing current and future

challenges. The United States'

position in the global economy is

declining, in part because U.S.

workers lack fundamental

knowledge in these fields. To

address the critical issues of U.S.

competitiveness and to better

prepare the workforce, A

Framework for K-12 Science

Education proposes a new approach

to K-12 science education that will

capture students' interest and

provide them with the necessary

foundational knowledge in the field.

A Framework for K-12 Science

Education outlines a broad set of

expectations for students in

science and engineering in grades

K-12. These expectations will

inform the development of new

standards for K-12 science

education and, subsequently,

revisions to curriculum, instruction,

assessment, and professional

development for educators. This

book identifies three dimensions

that convey the core ideas and

practices around which science and

engineering education in these

grades should be built. These three

dimensions are: crosscutting

concepts that unify the study of

science through their common

application across science and

engineering; scientific and

engineering practices; and

disciplinary core ideas in the

physical sciences, life sciences, and

earth and space sciences and for

engineering, technology, and the

applications of science. The overarching goal is for all high school graduates to have sufficient knowledge of science and engineering to engage in public discussions on science-related issues, be careful consumers of scientific and technical information, and enter the careers of their choice. A Framework for K-12 Science Education is the first step in a process that can inform state-level decisions and achieve a research-grounded basis for improving science instruction and learning across the country. The book will guide standards developers, teachers, curriculum designers, assessment developers, state and district science administrators, and educators who teach science in informal environments.
