
Holt Physics Momentum Problem 6a Answers

As recognized, adventure as without difficulty as experience very nearly lesson, amusement, as competently as deal can be gotten by just checking out a book Holt Physics Momentum Problem 6a Answers along with it is not directly done, you could recognize even more something like this life, as regards the world.

We offer you this proper as skillfully as simple quirk to get those all. We allow Holt Physics Momentum Problem 6a Answers and numerous ebook collections from fictions to scientific research in any way. in the midst of them is this Holt Physics Momentum Problem 6a Answers that can be your partner.

Over 7 km long, the train traveled 861.0 km in 22.67 h. Imagine that the distance was traveled in a straight line north. If the train ' s average momentum

was $7.32 \times 10^8 \text{ kg} \cdot \text{m/s}$ to the north, what was its mass?

SOLUTION

Holt Physics Problem 6A MOMENTUM PROBLEM

An ostrich with a mass of 146 kg is running with a momentum of $2480 \text{ kg}\cdot\text{m/s}$ to the right. What is the velocity of the ostrich?

SOLUTION Given: $m = 146 \text{ kg}$ $p = 2480 \text{ kg}\cdot\text{m/s}$ to the right Unknown: $v = ?$

Use the equation for momentum to solve for v . $p = mv$ $v = \frac{p}{m}$ $v = \frac{2480 \text{ kg}\cdot\text{m/s}}{146 \text{ kg}}$ $v = 17.0 \text{ m/s}$ to the right $2480 \text{ kg}\cdot\text{m/s}$ 146 kg 1.

Practice 6A: | 1 | 2 | 3 | Go up Momentum - by Matt Henderson, 2003. 1. An Ostrich with a mass of 146 kg is running to the right with a velocity of 17 m/s . Find the momentum of the ostrich. Here's what you know, $m = 146$ kg and $v = 17$ m/s use the formula $p = mv$ to find the power $p = (146)(17) = 2482$ kgm/s (Table of contents) 2.

SAMPLE PROBLEM 6A
Momentum PROBLEM A
2250 kg pickup truck has a

velocity of 25 m/s to the east. What is the momentum of the truck?

SOLUTION Given: $m = 2250 \text{ kg}$ $v = 25 \text{ m/s}$ to the east
Unknown: $p = ?$ Use the momentum equation from page 208. $p = mv = (2250 \text{ kg})(25 \text{ m/s})$ $p = 5.6 \times 10^4 \text{ kg}\cdot\text{m/s}$ to the east
