takes on the biggest questions in physics: Does the past still exist? Do particles think? Was the universe made for us? Has physics ruled out free will? Will we ever have a theory of everything? She lays out how far physicists are on the way to answering these questions, where the current limits are, and what questions might well remain unanswerable forever. Her book offers a no-nonsense yet entertaining take on some of the toughest

riddles in existence, and will give the reader a solid grasp on what we know—and what we don't know.

**Holt Science and Technology** Steck-Vaughn Building upon Serway and Jewetta's solid foundation in the modern classic text, *Physics for Scientists and Engineers*, this first Asia-Pacific edition of *Physics* is a practical and engaging introduction to *Physics*. Using international and local case studies and worked examples to add to the concise language and high quality artwork, this

new regional edition further engages students and highlights the relevance of this discipline to their learning and lives.

**Holt Science and Technology** Holt Rinehart & Winston *Physical Science* for grades 5 to 12 is designed to aid in the review and practice of physical science topics. *Physical Science* covers topics such as scientific measurement, force and energy, matter, atoms and elements, magnetism, and electricity. The book includes

realistic diagrams and engaging activities to support practice in all areas of physical science. The 100+ Series science books span grades 5 to 12. The activities in each book reinforce essential science skill practice in the areas of life science, physical science, and earth science. The books include engaging, grade-appropriate activities and clear thumbnail answer keys. Each book has 128 pages and 100 pages (or more) of reproducible content to help

students review and reinforce essential skills in individual science topics. The series is aligned to current science standards.

Derrickson, Knocking on Heaven's Door is eminently readable, one of the most important popular science books of this or any year. It is a necessary volume for all who admire the work of Stephen Hawking, Michio Kaku, Brian Greene, Simon Singh, and Carl Sagan; for anyone curious about the workings and aims of the Large Hadron Collider, the biggest and most expensive machine ever built by mankind; for those who firmly believe in the importance of science and rational thought;

and for anyone interested in how the Universe began...and how it might ultimately end.
