Remarkable advances in the past two decades in the molecular biological sciences and in the behavioral and social sciences have deepened our understanding of schizophrenia, one of the most disabling of psychiatric conditions. Most recently research has begun to converge on the cognitive characteristics of schizophrenia, as understood in the modern context of the cognitive sciences. The cognitive processes of perception, language, logical thought, problem solving, and emotional regulation have long been known to be seriously impaired in schizophrenia, and it is clear that cognitive impairments contribute heavily to the disabilities suffered by schizophrenic patients. However, it is not clear that technologies for dealing with such impairments will be forthcoming. Contributing to this collection of essays are clinicians, cognitive scientists, and policy makers who address the spectrum of questions which must be answered if the potential of cognitive science and technology is to be realized in psychiatric rehabilitation: How are we to understand cognitive impairments in terms of the etiology of schizophrenia? How should we measure and assess cognition in disabled individuals? How can we use information about a patient's cognitive functioning in treatment planning and rehabilitation? Can we directly remediate cognitive impairments with pharmacological or psychological treatment? Even if cognitive technologies prove useful, how can we get the mental health system to adopt them? If they are adopted, how might this in turn affect the mental health system and health care policy in general? The views of the contributors give cause for some optimism about the potential usefulness of cognitive technology and its future availability in the mental health system. This work defines the issues and establishes an agenda for continued research and policy development. [Catalog of Copyright Entries. Third Series](#) U of Nebraska Press

Educators want to know why university enrollment by Blacks is decreasing. Psychologists at a drug rehabilitation center want to know how kids decide what drugs to use, and how they decide to switch from soft to hard drugs. Sociologists in a Women's Studies Center want to know why women's groups disband so frequently. What do all these people have in common? They want to know why people in a certain group behave the way they do. More importantly, they need to know the specific decision criteria used by the group in question. *Ethnographic Decision Tree Modeling* presents a practical method for answering these questions. From starting research to testing and verifying results, this handy volume takes you step-by-step through this unique research process. Gladwin summarizes rules of interviewing, outlines the uses of contrast questions and quantitative data, and shows how to develop a decision tree model. In addition, common problems and errors are pointed out and various applications of the method are presented. "Offers an interesting data modeling device for organizing and interpreting every process of decision making, risk and benefit analysis and rule bending." --Nexus: The Canadian Student Journal of Anthropology

North Carolina has been a leader in the South and the nation since 1775, when it became "First in Freedom" by calling for its independence from British rule. Throughout its history, the state has had a reputation as a progressive force. This book offers both an assessment and an examination of the realities of the state's leadership. Analyzing a wide range of political actors and organizations, which includes the state legislature, the governor and executive branch, the judiciary, political parties, interest groups, and the media, Fleer illuminates North Carolina's rich political history, its evolving constitutional order, and its changing political culture. Although revealing a pattern of elitist paternalism in the state's political history, the book illustrates a parallel pattern of popular participation and control. Major forces of change are increasingly defining the state. These transitional factors include a significant biracial electorate, a stratified society, a diverse electorate, increasingly varied and mobilized political interest groups, a competitive political party system, and a more representative political leadership. New challenges to the state's future development are its aging population, the preparedness of its work force, the globalization of its economy, the protection of its natural resources, and the education of its children for the next century. Each new political debate, policy choice, and election reminds North Carolinians of their fundamental challenge: establishing a government by enlightened and effective popular consent.

In the face of our receding connection to nature and the loss of our direct experience of the world, this book proposes a different kind of environmentalism. It argues that we must restore our link with the 'more-than-human' world, bringing wilderness, animals, and the Earth closer to individuals and into daily life.

A comprehensive, readable introduction to the cultural dimensions of counseling and psychotherapy is now available. National leaders in each topic have been selected to provide an accessible, yet thorough, presentation of culturally alert counseling. An introduction to the nature of counseling and culture begins the book, followed by chapters on Social Inequality, Race, and Ethnicity. The succeeding chapters reveal the characteristics, histories, mental health issues, and appropriate counseling strategies for each of eleven cultural groupings. The book ends with a thorough presentation of actual culturally alert counseling practice. Seven dimensions combine to make the book unique, namely thoroughness, inclusiveness, theoretical foundations, practicality, readability, activity, and modeling. In the first case, this book broadens the discussion of culture from ethnicity and race to include social class, religion, gender, and sexual orientation. Of particular note, in the area of ethnicity, all five of the major U.S. pan-ethnic groupings are presented, as well as Middle Eastern and South Asian people. The book is also inclusive of all people, including both those in dominant and non-dominant cultural groups. The assumption is that everyone has culture. Culturally alert counseling is also theoretically grounded in the first few chapters of the book, which lay out a guiding developmental vision of culturally alert counseling. Further conceptual foundations are laid in discussions of social inequality, social justice, social diversity, and critical consciousness. The practical dimension of the book is underscored by the inclusion of a chapter devoted to actual culturally alert counseling skills, an area that is needed by practitioners in this important work. Readability and interest are enhanced by the interweaving of case vignettes and experiential activities throughout the book. Finally, culturally alert counseling skills are modeled in an accessible, vital demonstration video that accompanies the book. Ultimately, readers will leave informed, moved, and changed by the encounters with culture that lie in these pages. They will also be ready to begin practice equipped with both a vision of the work and practical skills in implementing it.

Drawing on historical documents and newspaper reports, this book provides a fascinating portrait of a diverse group of character actresses who left their stamp on Hollywood from the early sound era through the 1960s. The lives of 35 actresses are explored in detail. Some are familiar: Margaret Hamilton starred in dozens of films before and after her signature role as the Wicked Witch in *The Wizard of Oz*; Una Merkel nearly died when her mother committed suicide in 1945. Others are nearly forgotten: Maude Eburne owed her career to a spectacular fall on the Broadway stage in 1914; Greta Meyer, who played the quintessential German maid, came to Hollywood after years in New York’s Yiddish theater--though she wasn’t Jewish.
