DESCRIPTION OF BOOK Building, office and home automation systems are a specialized, technical area, requiring years to master. In this "made easy" reference book, technical concepts have been simplified and made accessible to the practitioners in the field, and, also to the interested lay people who have no knowledge of this arcane specialization but who wish to gain a quick and easy grasp of this specialized subject. Much of the facts presented in the book are of the "hands on," practical variety, which are unlikely to be found in

other related technical books which tend to be overly theoretical. The project notes compiled by the author and incorporated in the book should prove invaluable and insightful to the interested reader, especially the reader embarking on or already in building, office and home automation systems projects. To facilitate assimilation of the facts by the reader, there are plenty of illustrations and diagrams. In the book, the author also shares his experiences and knowledge of the field with the reader, something which cannot be obtained strictly from technical books. ABOUT THE AUTHOR The author has published about 20 books, two of which have been adopted as reference texts and commended by professional bodies. He was also the editor of a book of essays. He has many years of experience in electronics. He has taught many professional, management and technical subjects for years. He has published a number of important papers, including several papers on the solutions to some famous, unsolved problems, in international research journals and has served on the faculty of

an American research university as a professor. He has received publicity from the press for some intellectual achievement.

Manage your smart home with Apple's HomeKit platform Version 1.5, updated February

22, 2023 Thanks to Apple's HomeKit platform, you can easily configure smart home devices (such as light bulbs, outlets, thermostats, sensors, cameras, and door locks) from a variety of manufacturers to behave exactly as you need them to; integrate them with a hub such as a HomePod or Apple TV; and control them with an iOS/iPadOS device, a Mac, an Apple Watch, Siri commands, or automated programming. This book gives you all the information you need to get started. "Smart home" devices are everywhere these days—you can buy internet-connected light bulbs, thermostats, door locks, sensors, and dozens of other products. But these devices aren't very smart on their own. Apple's HomeKit platform offers a way to integrate, monitor, control, and automate smart

home devices from a wide variety of manufacturers. Using the built-in Home app on a Mac or iOS/iPadOS device (perhaps along with third-party apps), you can connect to your various smart devices, see what they're up to, control them, and even get them to operate on a schedule or respond to changing conditions in your home automatically. Even with HomeKit, however, home automation can be a daunting prospect. That's why Josh Centers wrote *Take Control of Apple Home Automation*. The book walks you carefully through every step of the process, showing you how you can start with a basic system that costs less than \$50 and work your way up to as much complexity as you want or need. And you don't have to be a computer geek to simplify and improve your

life with HomeKit-compatible products. Even if you don't know a wire nut from a macadamia or which end of a screwdriver to stick in a socket (spoiler: neither!), Josh's thorough advice will enable you to work wonders in your home. In this book, you'll learn:

- The most common home automation myths (and why you shouldn't worry about them)
- How to choose HomeKit-compatible devices that meet your needs, and which products you might want to avoid
- Exactly what HomeKit is, what it does, how it works, and what its limitations are
- Why you need a hub (in the form of an Apple TV, HomePod, or iPad) and how to set it up
- Important safety rules for working with electrical products, especially those that require wiring
- How to install advanced accessories

such as a smart switch, thermostat, or door/window sensor—including illustrated, step-by-step instructions

- What Apple's Home app for Mac and iOS/iPadOS does—and how to configure homes, zones, rooms, accessories, services, and scenes
- Tips for controlling your smart home using a Mac, iOS/iPadOS device, Apple Watch, HomePod, or Siri
- Ways to automate your smart home using schedules, sensors, geofencing, and other tools (without making your house seem haunted)
- The best ways to troubleshoot home automation problems

This book was sponsored by Elgato (the original makers of the Eve line of HomeKit devices, which spun off into a separate company in 2018), so many of the examples feature Eve products, although nearly all the advice in the book is

applicable to HomeKit products from any manufacturer. (You'll also read about working with Philips Hue bulbs, ecobee thermostats, and numerous other devices.) If you're an Apple user who's interested in joining the smart home revolution—or adding even more smarts to your existing setup—this book is the ideal guide.
