Family Economics Review Routledge

Every student has a creative potential. An atmosphere needs to be maintained in the classroom that motivates and encourages the student to use and to develop this potential. Evidence indicates that teachers need help in freeing and in stimulating each student's creative potential. A learning package on design principles was developed to motivate students and develop their creative potential as evidenced by the results of a pre and a post test, Figural Forms A and B of Torrance Tests of Creative Thinking. Three lists were compiled from a review of current literature concerning creativity: (1) characteristics of the creative person, (2) guidelines for developing learning experiences to develop creative potential, and (3) guidelines for teachers who wish to develop the creative potential of their students. The first two lists were utilized in the construction of the behavioral objectives and learning experiences in the package. Each behavioral objective was designed to incorporate two of the five main categories of characteristics of the creative person. Two of the seven categories on the list of guidelines for developing learning experiences were used in each learning experience. The learning package contained five sections, Emphasis, Balance, Rhythm, Proportion, and Harmony, and "Idea Sheets." Using a questionnaire, 27 home economists evaluated the package rating from one to five how well each behavioral objective or learning experience satisfied its criteria. A mean rating was computed for each item on the questionnaire. If the mean was lower than 3.5, the writer either justified or revised the behavioral objective or learning experience. The package was used by the writer's high school advanced

clothing class of 12 members. Before beginning the package the students were divided in half. One half was given Figural Form A and the other half was given Figural Form B of Torrance Tests of Creative Thinking as a pretest. The forms were reversed in the post test so the students did not take the same test twice. After initial confusion and frustration most of the students indicated verbally and demonstrated their interest and enjoyment in the package. A test focused on the subject matter of the package seemed to be quite difficult as evidenced by low mean scores for each section and for the total test. A t test revealed no significant difference between the group which was given Figural Form A followed by Figural Form B and the group which was given Figural Form B followed by Figural Form A. Therefore, the data were combined and a t test of the mean gain in score was significant at the one percent level for fluency, flexibility, and originality. Mean gain for elaboration was not significant. Results reveal that even though the students scored poorly on the learning package subject matter test, they did develop creativity in the areas of fluency, flexibility, and originality. One needs to recall that the purpose of the learning package was not acquisition of subject matter information, but development of creativity. Because of the nature of creativity, characteristics of the creative person, and guidelines that should be followed in creative development, the writer was not able to give some types of assistance to students while they were working on the package. The writer feels that if this help had been given, more subject matter information would have been acquired However, this action might have resulted in less creativity. The importance of the teacher in this learning experience is quite obvious. The teacher must have the knowledge and the ability to create and to maintain an environment conducive to the development of creativity if creative development is to be fostered.

Resources in Education Rex Bookstore, Inc.

This encyclopedia is the most current and exhaustive reference available on international education. It provides thorough, up-to-date coverage of key topics, concepts, and issues, as well as in-depth studies of approximately 180 national educational systems throughout the world. Articles examine education broadly and at all levels--from primary grades through higher education, formal to informal education, country studies to global organizations.

*Consumers' Guide* Springer Nature

This book draws together the perceptions and experiences from a range of international professionals with specific reference to food education. It presents a variety of teaching, learning and curriculum design approaches relating to food across primary, secondary and vocational school education, undergraduate initial teacher education programs, and in-service professional development support contexts. Contributions from authors of a variety of background and countries offer insight into some of the diverse issues in food education internationally, lessons to be learned from successes and failures, including action points for the future. The book will be both scholarly and useful to teachers in primary

---

and secondary schools.
