Malnutrition and obesity are both common among Americans over age 65. There are also a host of other medical conditions from which older people and other Medicare beneficiaries suffer that could be improved with appropriate nutritional intervention. Despite that, access to a nutrition professional is very limited. Do nutrition services benefit older people in terms of morbidity, mortality, or quality of life? Which health professionals are best qualified to provide such services? What would be the cost to Medicare of such services? Would the cost be offset by reduced illness in this population? This book addresses these questions, provides recommendations for nutrition services for the elderly, and considers how the coverage policy should be approached and practiced. The book discusses the role of nutrition therapy in the management of a number of diseases. It also examines what the elderly receive in the way of nutrition services along the continuum of care settings and addresses the areas of expertise needed by health professionals to provide appropriate nutrition services and therapy.

The subject of enteral nutrition is an interesting one both to the healthcare professionals working in this practice area and to the individuals who may benefit from nutritional support. These individuals usually have functional guts but may be suffering from dysphagia (with the underlying neurological deficits) or the effects of radiotherapy treatment. Enteral nutrition involves the provision of nutritional support to individuals whose nutritional requirements cannot be met by a normal diet. In particular, it is the process of delivering enteral feed via feeding tubes such as nasogastric feeding, nasojejunal and percutaneous endoscopic gastrostomy tubes. Often, enteral nutrition provision involves the assessment of nutritional status, the determination of nutritional requirements, the establishment of feeding regimes, and the management of patients, pumps, feeds, and feeding tubes. Researchers in this field are also keen to evaluate the effect of enteral feeding protocols, algorithms, and guidelines on patients with different medical conditions in various care settings. There have also been a series of comparisons between the use of feeding tubes, feeding methods, and management approaches. Economic evaluations of enteral nutrition and Home Enteral Nutrition

(HEN) teams show the benefits of Home Enteral Tube Feeding (HETF); however, due to the rising cost of HETF, there has been intense debate on the subject. There have been reviews on advances, challenges, and prospects in enteral nutrition. This Special Issue is intended to provide information on recent advances in the area of enteral nutrition.

Essentials of Pediatric Nursing Lippincott Williams & Wilkins

This text provides a review of the current knowledge in both the mechanics of nourishing the critically ill and the metabolic and immunological roles nutrients play. In-depth chapters discuss disease-related malnutrition as distinct from under-or-over nourishment and the impact of nourishment in either form of malnutrition. The appropriate timing and indications for nutrition support are provided as well as advanced techniques for improving practice. A broad range of issues related to interdisciplinary practice are addressed. Useful for a wide variety of practitioners, including ICU doctors, hospitalists, and nutrition support physicians, *Nutrition Support of the Critically Ill* provides practical bedside advice and simplified recommendations for practice.

Handbook of Home Nutrition Support Cambridge University Press

This thoroughly revised and updated Third Edition of a bestselling handbook provides comprehensive coverage of systems approaches to medical nutrition therapy. Designed for graduate nutrition students, dietetic interns, and practicing dietitians, this authoritative handbook provides a solid foundation in and reference to the nutrition support field. Expert contributors present a practical approach to the delivery of parenteral and enteral nutrition. It covers all of the basics—nutritional assessment, nutrition management, monitoring and complications, and formulas, as well as new topics—wound healing, trauma, and critically ill obese patients. This is the first textbook to fully integrate the Nutrition Care Process into enteral and parenteral nutrition content as specified in the 2008 Commission on Accreditation of Dietetic Education Standard II. The Nutrition Care Process content is updated to reflect changes from the 2011 edition of the International Dietetics and Nutrition Terminology.

Gastrointestinal Emergencies Taplinger Publishing Company

This book serves as a definitive nutritional reference for medical practitioners who care for patients with digestive diseases. This first-of-its-kind title explores the critical link between nutrition and weight and digestive health and organizes the necessary information for easy use for clinicians across specialties. The book is divided into four sections; the first section outlines basic nutritional concepts that lay a foundation for future chapters. This includes discussion of the gastrointestinal tract's role in digestion and metabolism, an outline of dietary composition and associated deficiencies, and a review of nutritional assessment and general therapeutic principles. Next, the second section outlines dietary and nutritional implications of specific digestive diseases organized by affected gastrointestinal organs. Following this, the third section discusses appetite regulation, weight management, and obesity's association with gastrointestinal diseases. It also discusses the importance of comprehensive, multi-disciplinary obesity care including a review of dietary, pharmacological, endoscopic, and surgical options that promote weight loss. In concluding the book, the fourth section discusses foundational nutritional support concepts. *Nutrition, Weight, and Digestive Health* is an invaluable reference for medical practitioners seeking a title that explores important and revolutionary elements to the medical care of those with digestive diseases.

Handbook of Nutrition in the Aged, Fourth Edition Jones & Bartlett Learning

This book answers key questions asked by emergency clinicians faced with complex gastrointestinal and abdominal pain presentations. Instead of a traditional format that includes epidemiology, pathophysiology, diagnosis, and treatment options, this book takes an approach that mirrors the way clinicians interact with patients – by asking and answering specific clinical care questions. The book is organized into sections by presentation – gastrointestinal bleeding, for example – each of which contains chapters on specific questions, such as “What is the best clinical risk score for low risk GIB patients?” Each clinical question comes with a detailed, evidence-based response and a summary that gives best practices, recommendations, and references. Additionally, at the end of each section is a chapter titled “Expert Corner,” which asks the same clinical questions to a surgical or gastrointestinal specialist and includes key pearls these experts have for emergency medicine practitioners.

Gastrointestinal Emergencies: Evidence-Based Answers to Key Clinical Questions is an essential guide for emergency medicine physicians, residents, and medical students who want to review and improve their care of acute gastrointestinal emergencies.

The A. S. P. E. N. Pediatric Nutrition Support Core Curriculum, 2nd Edition Springer Nature

Parenteral nutrition in general is required if nutritional needs cannot be met by oral or enteral feeding. In the paediatric patient, its initiation depends both on individual circumstances and the age and size of the infant or child. This compact reference work on parenteral nutrition in children is based on the 'Guidelines for Paediatric Parenteral Nutrition' that have been developed jointly by the European Society for Paediatric Gastroenterology, Hepatology and Nutrition (ESPGHAN) and the European Society for Clinical Nutrition and Metabolism (ESPEN), in collaboration with the European Society for Paediatric Research (ESPR). These guidelines were based on systematic literature

reviews as well as a formal consensus process of a multidisciplinary panel of professionals. However, as a result of the scarcity of good quality clinical trials in children, many of the recommendations were extrapolated from adult studies and based on expert opinion. A detailed analysis of the available data was performed, and for each statement, the level of evidence and grade of recommendation was assessed. This reference guide has been conceived as an aid for the treating physician to assist him in the decision process, thus being a valuable companion in clinical practice.
