Smart homes, home automation and ambient-assisted living are terms used to describe technological systems that enrich our living environment and provide means to support care, facilitate well-being and

improve comfort. This handbook provides an overview of the domain from the perspective of health care and technology. In Part 1, we set out to describe the demographic changes in society, including ageing and diseases and impairments which lead to the needs for technological solutions. In Part 2, we describe the technological solutions, ranging from sensor-based networks, components, to communication protocols that are used in the design of smart homes. We also deal with biomedical features which can be measured and services that can be delivered to end-users as well as the use of social robots. In Part 3, we present best practices in the field. These best practices mainly focus on existing projects in Europe, the USA and Asia, in which people receive help through dedicated technological solutions being part of the continuum of the home environment and care.

Organizing for Resilience provides a fresh and novel insight into research on how leaders can prepare their organizations to face up to shocks and disruptions in a turbulent and unpredictable world. It provides an analysis of the topic of organizational resilience in a comprehensive and integrative way, with fresh theoretical and research implications as well as important implications for leaders. The first book to synthesize themes from across a spectrum of resilience using the metaphor of a 'resilience landscape', chapters in Part I are devoted to five analytical levels: individual level resilience; small firms in which major disruption can threaten survival; large firms with disruptions in one part of the organization; large firms facing enterprise-wide disruption; and disruption to a complete community or economic ecosystem of individuals and organizations. Cases and practice insights are presented to bring the topics to life, allowing reflection and debate at each level. In Part II, the construct of the 'resilience landscape' is developed, along with a discussion on leadership for resilience by instilling a resilience mind-set and developing capabilities in relational resilience. The book is ideally suited to bachelor's and master's degree courses on strategy, organizational behaviour and leadership. PhD and DBA researchers in the field of resilience and strategy will also find the book useful, as will practising consultants and business leaders.
