Health Care Comes Home

IEM Press

The rapid growth of home health care has raised many unsolved issues and will have

consequences that are far too broad for any one group to analyze in their entirety. Yet a major influence on the safety, quality, and effectiveness of home health care will be the set of issues encompassed by the field of human factors

research-the discipline of applying what is known about human capabilities and limitations to the design of products, processes, systems, and work environments. To address these challenges, the National

Research Council began a multidisciplinary study to examine a diverse range of behavioral and human factors issues resulting from the increasing migration of medical devices, technologies, and care practices into the home. Its goal is to lay the groundwork for a thorough integration of human factors research with the design and implementation of home health care devices, technologies, and practices.

On October 1 and 2, 2009, a group of human factors and other experts met to consider a diverse range of behavioral and human factors issues associated with the increasing migration of medical devices, technologies, and care practices into the home. This book is a summary of that workshop, representing the culmination of the first phase of the study. *Survival for the Fittest in Home Health Care* Marrelli and

The absence of universal health insurance coverage in the United States of America has been

debated for years without many solutions being proposed. Barry G. Hoerig, a registered nurse and certified case manager, explains how Medicare for all would solve our problems in this thought-provoking book. He also reveals how politicians continue to work against a solution that could transform our health care system. As you read, you ' ll get answers to questions such as:

- How does the American health care system go against the tenets of capitalism?
- How are people without insurance treated differently than those with insurance?
- How can American health care offer consumers more choices? Paving the way for Medicare for all makes sense but it

won ' t come at a cost: Yes, Americans will have to pay more taxes, but it will also result in a reciprocal reduction of taxes and health care premiums elsewhere. It ' s imperative, however, that Medicare for all be cost effective and fair. Moreover, it must temper the negative aspects of capitalism while avoiding the awful results of socialism. The number of elderly and disabled Americans in need of home health care is increasing annually, even as the pool of people—almost always women—willing to do this job gets smaller and smaller. The *Caring Class* takes readers inside the reality of home health care by following the lives of women training and working as home health aides in the South Bronx. Richard Schweid examines home health care in detail, focusing on

the women who tend to our elderly and disabled loved ones and how we fail to value their work. They are paid minimum wage so that we might be absent, getting on with our own lives. The book calls for a rethinking of home health care and explains why changes are urgent: the current system offers neither a good way to live nor a good way to die. By improving the job of home health aide, Schweid shows, we can reduce income inequality and create a pool of qualified, competent home

health care providers who would contribute to the well-being of us all. The Caring Class also serves as a guide into the world of our home health care system. Nearly 50 million US families look after an elderly or disabled loved one. This book explains the issues and choices they face. Schweid explores the narratives, histories, and people behind home health care in the United States, examining how we might improve the lives of both those who receive care and those who provide it.
