This book is an overview of the United States legal system, with a brief introduction to Islamic and International law. The book is divided into six parts. Part I (The Legal System and Crime) introduces the U.S. legal system and the classification of crime. Part II (White Collar Crime) covers cybercrime, crime the old fashioned way, and healthcare fraud. Part III (Homicide) deals with simple murder, serial murder, mass and spree murder; and assassination. Part IV (Special Groups) covers the mafia; the family; the medical, legal, and teaching professions; the religion profession; celebrities; and stupid criminals. Part V (On the Edge) deals with topics I consider to be a bit strange; that is, quackery, innovative defenses, and dangerous cults. And finally, Part VI (Residue) discusses what is left ... capital punishment and crimes against humanity, including terrorism. Throughout the book, to illustrate points, I have used over 300 cases of actual crimes. The names of the people and the facts of the cases used in the discussions of these crimes are taken directly from referenced news reports. The subtitle, Computer Viruses to Twin Towers, reflects the scope of the book; that is, from computer viruses, which cause only aggravation or loss of money, to the deadly terrorist attacks on the Twin Towers of the World Trade Center and the Pentagon on September 11, 2001 that snuffed out almost 3000 lives.

Identity fraud happens to everyone. So what do you do when it's your turn? Increasingly, identity theft is a fact of life. We might once have hoped to protect ourselves from hackers with airtight passwords and aggressive spam filters, and those are good ideas as far as they go. But with the breaches of huge organizations like Target, AshleyMadison.com, JPMorgan Chase, Sony, Anthem, and even the US Office of Personnel Management, more than a billion personal records have already been stolen, and chances are good that you're already in harm's way. This doesn't mean there's no hope. Your identity may get stolen, but it doesn't have to be a life-changing event. Adam Levin, a longtime consumer advocate and identity fraud expert, provides a method to help you keep hackers, phishers, and spammers from becoming your problem. Levin has seen every scam under the sun: fake companies selling "credit card insurance"; criminal, medical, and child identity theft; emails that promise untold riches for some personal information; catphishers, tax fraud, fake debt collectors who threaten you with legal action to confirm your account numbers; and much more. As Levin shows, these folks get a lot less scary if you see them coming. With a clearheaded, practical approach, Swiped is your guide to surviving the identity theft epidemic. Even if you've already become a victim, this strategic book will help you protect yourself, your identity, and your sanity.
