Wiring Essentials Surround  
speaker wires permits acoustic  
signals to pass from amplifiers  
to loudspeakers in a standard  
home theater setup. While this  
is relatively straightforward,

specific properties of the wire in  
question impact various sound  
quality factors, such as noise,  
fidelity and attenuation, or  
signal reduction.

Usually, using a 16-gauge  
wire is recommended for  
most home theater  
applications. However, if the  
wiring network for your  
home theater requires more  
than 50 feet of wire or if you  
want to set up in-wall or  
ceiling speakers, you may  
need to use a thicker wire  
(preferably 14 or 12-gauge)  
because long cable runs can

cause considerable power  
losses.
