When it comes to their personal transportation, today's youth have shunned the large, heavy performance cars of their parents' generation and instead embraced what has become known as the "sport compact"--smaller, lightweight, modern sports cars of predominantly Japanese

manufacture. These cars respond well to performance modifications due to their light weight and technology-laden, high-revving engines. And by far, the most sought-after and modified cars are the Hondas and Acuras of the mid-'80s to the present. An extremely popular method of improving vehicle performance is a process known as engine swapping. Engine swapping consists of removing a more powerful engine from a better-equipped or more modern vehicle and installing it into your own. It is one of the most efficient and affordable methods of improving your vehicle's performance. This book covers in detail all the most popular performance swaps for Honda Civic, Accord, and Prelude as well as the Acura Integra. It includes vital information on electrics, fit, and drivetrain compatibility, design considerations, step-by-step instruction, and costs. This book is must-have for the Honda enthusiast.

Japanese manufacturing investment in the European Community has grown dramatically over the last twenty years. At first, instances of investment were few, concentrated in a small number of industrial sectors. But since the mid-1980's there has been a surge of investment in a much wider range of industries. This volume details the growth of Japanese manufacturing investment in Europe in fourteen industrial sectors. The impact of Japanese competition and direct investment on European industries is considered in the context of the emergence of the three major trading blocs: the United States, Japan and the EC. Roger Strange concludes by making important policy recommendations, and arguing for the need for a new theoretical framework for assessing the political economy of foreign direct investment.
