The Honda K-Series engine was introduced in 2001, replacing the B-Series as the engine of choice for Honda enthusiasts. These new K-Series engines are the most powerful stock Honda/Acura engines you can get. They featured new technology such as a roller rocker valvetrain, better flowing heads, and advanced variable cam timing technology that made these engines suddenly the thing to have. And that's where the engine swappers come in. In Honda K-Series Engine Swaps, author Aaron Bonk guides you through all the details, facts, and figures you will need to complete a successful K-Series swap into your older chassis. All the different engine variants are covered, as well as

interchangeability, compatibility, which accessories work, wiring and controls operation, drivetrain considerations, and more. While you can still modify your existing B-Series, dollar for dollar, you can't make more power than you can with a Honda K-Series engine. If you have an older chassis and are looking for a serious injection of power and technology, swapping a K-Series engine is a great option. Honda K-Series Engine Swaps will tell you everything you need to know.

This book engages with Foucault ' s theoretical works to understand the (re-) making of the working-class in China. In so doing, the author applies Foucault ' s genealogical (historicalization) method to explore the ways the Chinese Communist Party (CCP) develop Chinese governmentality (or government of mentalities) among everyday workers in its thought management system. Through the investigation of the key events in Chinese history, she presents how China ' s stable political party is sustained through the CCP ' s ability to retain, update and incorporate many Confucian discourses into

its contemporary form of thought management system using social networks, such as families and schools, to continuously (re-) shape workers ' consciousness into one that maintains their docility. This book will bring a new voice to the debate of Chinese working-class politics and labour movements. It will serve as a gateway to comprehensive knowledge about China for students and academics with interests in Chinese employment relations, Chinese politics, labourist activist culture, and social movements.

This book consists of papers presented at AUTOMATION2019, an international conference held in Warsaw from March 27 to 29, 2019. It discusses the radical technological changes occurring due to the INDUSTRY 4.0. To follow these changes, both scientists and engineers have to face the challenge of interdisciplinary approach directed at the development of cyber-physical systems. This approach encompasses interdisciplinary theoretical knowledge, numerical modelling and simulation as well as application of artificial intelligence techniques. Both software and physical devices are composed into systems that will increase production efficiency and resource savings. The theoretical results, practical solutions and guidelines presented are valuable for both researchers working in the area of engineering sciences and practitioners looking for solutions to industrial problems.
