From dirt bikes and jet skis
to weed wackers and
snowblowers, machines
powered by small gas
engines have become a

permanent—and loud—fixture
in American culture. But
fifty years of high-speed
fun and pristine lawns have
not come without cost. In
the first comprehensive
history of the small-bore
engine and the technology it
powers, Paul R. Josephson
explores the political,
environmental, and public
health issues surrounding
one of America's most
dangerous pastimes. Each
chapter tells the story of an
ecosystem within the
United States and the
devices that wreak havoc on
it—personal watercraft
(PWCs) on inland lakes and
rivers; all-terrain vehicles

(ATVs) in deserts and forests; lawn mowers and leaf blowers in suburbia. In addition to environmental impacts, Josephson discusses the development and promotion of these technologies, the legal and regulatory efforts made to improve their safety and environmental soundness, and the role of owners' clubs in encouraging responsible operation. Synthesizing information from medical journals, recent environmental research, nongovernmental organizations, and manufacturers, Josephson's compelling history leads to

one irrefutable conclusion: these machines cannot be operated without loss of life and loss of habitat. Consumer Behavior Haynes Publications This report provides a detailed snapshot of our nation's passion for wildlife and nature. It serves as a road map to guide efforts to reach more Americans to provide them with opportunities to hunt, fish, and enjoy America's wildlife and wild places. Bird/wildlife watching, hunting, fishing are not just favorite pastimes, but they share

revenues from sale of licenses and tags, as well as excise taxes paid by hunters, anglers, and shooters to continue to support vital wildlife and habitat conservation efforts in every state. The report outlines the details for compilation of information and surveys to different populations and provides highlights along with statistical information represented in tables from the data collected.
