It is July 2039, and two highly disciplined men with nerves of steel honed in a \$2 billion nuclear submarine are obsessively discussing infectious diseases. Marine Lt. Colonel Buzz Striker and Navy Commander Dwight Hoggue are sitting on highly classified information from the Chinese that an aggressive virus reported to cause a cytokine storm in its victims in a matter of hours has been unleashed on the world. They prepare for the worst. Six months later, Striker is in hiding, and Commander Hoggue is devastated. His grandchildren and his wife are dead. Isolated in a cabin outside a Floridian forest, Hoggue watches helplessly as the virus spreads across the United States, eventually collapsing the government and leaving only the addicted and compulsive unaffected by the disease. Suddenly, Hoggue becomes a man on a mission, determined to build his own paramilitary organization that will combat those who wish to enslave the survivors for their own selfish purposes. In this science fiction tale, a societal collapse reveals a futuristic hell populated only by alcoholic, drug-addicted, cruel enslavers. As a devastated population awaits a miracle, two military commanders must do everything in their power to bring order, salvation, and ultimately hope-before all life ends forever.

*The Concise Handbook of Management* Greenwood Publishing Group

Hailed by Japanese critics as a milestone in the study of contemporary Japanese media, this book explores the contemporary 'boom' in Japanese media representations of the recent past. Recent years have seen the production of an unprecedented number of films, animation, manga, and television programmes representing a deeply nostalgic longing for the Japanese heyday of high economic growth in the 1960s and occasionally the 1970s known in Japan as the Shōwa '30s and '40s. Hidaka provides a comprehensive account of an under researched contemporary Japanese media phenomenon by exploring why this nostalgia has been sparked at this particular historical juncture and how that period is represented in the Japanese media today. The book accomplishes this through a detailed textual and narrative analysis of representative films and television programmes, in relation to their social and cultural context. While these nostalgic media renderings are seen by many critics as innocuous, this study demonstrates that they do not show a simple yearning for the period, but reflects a growing discontent with Japanese post-war society. In this regard, this book concludes that the current nostalgia wave is a critical reaction to the recent past as it seeks to revise historiography through a processes of introspection within popular conceptions of the meta narrative of 'nostalgia'. Winner of the Japan Communication Association 2015 Outstanding Book Award.

2008 Outstanding Academic Title, Choice Magazine From dirt bikes and jet skis to weed wackers and snowblowers, machines powered by small gas engines have become a permanent—and loud—fixture in American culture. But fifty years of high-speed fun and pristine lawns have not come without cost. In the first comprehensive history of the small-bore engine and the technology it powers, Paul R. Josephson explores the political, environmental, and public health issues surrounding one of America's most dangerous pastimes. Each chapter tells the story of an ecosystem within the United States and the devices that wreak havoc on it—personal

watercraft (PWCs) on inland lakes and rivers; all-terrain vehicles (ATVs) in deserts and forests; lawn mowers and leaf blowers in suburbia. In addition to environmental impacts, Josephson discusses the development and promotion of these technologies, the legal and regulatory efforts made to improve their safety and environmental soundness, and the role of owners' clubs in encouraging responsible operation. Synthesizing information from medical journals, recent environmental research, nongovernmental organizations, and manufacturers, Josephson's compelling history leads to one irrefutable conclusion: these machines cannot be operated without loss of life and loss of habitat.

The Journey to Enterprise Agility Springer

Since its birth as a motorcycle company in 1949, Honda has steadily grown into one of the world's largest automakers and engine manufacturers, as well as one of the most beloved, most profitable, and most consistently innovative multinational corporations. What drives the company that keeps creating and improving award-winning and bestselling models like the Civic, Accord, Odyssey, CR-V, and Pilot? According to Jeffrey Rothfeder, what truly distinguishes Honda from its competitors, especially archrival Toyota, is a deep commitment to a set of unorthodox management tenets. The Honda Way, as insiders call it, is notable for decentralization over corporate control, simplicity over complexity, experimentation over Six Sigma – driven efficiency, and unyielding cynicism toward the status quo and whatever is assumed to be the truth. Those are just a few of the ideas that the company's colorful founder Soichiro Honda embedded in the DNA of his start-up sixty-five years ago. As the first journalist allowed behind Honda's famously private doors, Rothfeder interviewed dozens of executives, engineers, and frontline employees about Honda's management practices and global strategy. He shows how the company developed and maintained its unmatched culture of innovation, resilience, and flexibility—and how it exported that culture to other countries that are strikingly different from Japan, establishing locally controlled operations in each region where it lays down roots.

Large Air-Cooled Engine Vol 1 Haynes Manuals N. America, Incorporated

Summary: Honda Motor JHU Press

This is the story of six extraordinary men who each built something from nothing, redefined the automotive industry after World War II, and redirected its course for the future: Henry Ford II (visionary autocrat with an iron will), Shoichiro Honda (most successful automotive entrepreneur since Henry Ford I), Eberhard von Kuenheim (founder of the modern BMW), Lee Iacocca, Ferdinand Piech (builder of Volkswagen Group) and Robert Lutz (who left retirement at 70 and is still highly influential at General Motors). What made them special was the sheer volume of fundamental change they brought to the largest industry in the history of the world. They not only re-shaped the auto business, the six made a sizable dent in the societies they lived in. To a man they were great cognitive thinkers. Their minds worked with animal speed, even instinct speed. But more than anything these were brave and cantankerous souls who rode the waves of history. Each could see the future. They could just make it out-sometimes imperfectly, but could see it nonetheless. They took a business that had begun to mature and decline by the 1930s and found ways to make it fresh and whole again.- The compelling story of the global car business over the past half-century.- A lively and engaging narrative that recounts some times collaborative, sometimes archly antagonistic interactions among the men- Full of business revelations at the highest level, written by a journalist operating at the heart of the industry- Global appeal that shows how automotive groups in the USA, Europe and Asia have influenced each other- A business story interlaced with personal details that explains why the six were determined to be successful. --Publisher.
