SOHC air-cooled, with a fan attached to the flywheel to pull cool air through the engine block, labeled DDAC, or Duo Dyna Air Cooling. This warm air, and additional hot air from around the exhaust manifold, was then used to heat the passenger compartment, a novel approach which was not commonly used afterward.

The Honda RA302 was a very innovative car with an air-cooled 120 ° V8 with massive potential that was never seen before. The RA302 was the type of car that has a monocoque extending towards

the engine. The oil cooler was placed under the front cowl to avoid a fluent air stream around the car.

Details

Forced air

cooled engine - no water pump worries. The air-cooled block eliminates concern over clogged water pumps and debris being sucked into the powerhead, as well as reducing maintenance.

Automotive History: The Last Two New Air-Cooled Car Engines

With the exception of a few water-cooled Formula 1 cars, Honda built nothing but air-cooled engines for its motorcycles and cars through the 1960s.

Soichiro Honda

loved air cooled engines. "Since water-cooled engines eventually use air to cool the water, we can implement air cooling from the very beginning," professed Mr. Honda.
