The Honda CB400 Super  
Four is a CB series 399 cc

(24.3 cu in) standard  
motorcycle produced by  
Honda at the Kumamoto  
plant from 1992 to the present.  
The CB400 embodies the  
typical Universal Japanese  
Motorcycle produced through  
the 1970s, updated with  
modern technology. To this  
end, the bike has a naked retro  
design, paired with a smooth  
inline-four engine.

## **Honda CB400SF - Wikipedia**

Honda introduced a new  
VTEC (Variable Valve-Timing  
and Lift Electronic Control)  
engine system for its Super  
Four CB400 sport bike,  
resulting in cleaner operation  
and higher fuel efficiency. In  
Honda tests, Hyper VTEC  
engines produced lower  
emissions and higher output,  
with fuel efficiency improved  
by about 6.5%.

## **Honda Debuts New Hyper VTEC System on CB400 Sport Bike**

This is my Vintage 1989 Honda  
CB-1, also known as the NC27  
and CB400F. These collectable  
bikes were only sold in the US for  
two years, 1989-1990. They were  
powered by the Japanese market  
CBR400RR engine- a liquid

cooled, DOHC, 4-cylinder that  
revs to 13,500 rpm. It's also a 6  
speed!

VTEC (Variable Valve  
Timing & Lift Electronic  
Control) is a system  
developed by Honda to  
improve the volumetric  
efficiency of a four-stroke  
internal combustion engine,  
resulting in higher  
performance at high RPM,  
and lower fuel consumption  
at low RPM. The VTEC  
system uses two (or  
occasionally three) camshaft  
profiles and hydraulically  
selects between profiles.
