Machining is an essential
part of high-performance
engine building and stock
rebuilding, as well as certain
servicing procedures.
Although you may not own
the expensive tooling and
machining to perform all or
any of the machining
required for a quality build,
you need to understand the
principles, procedures, and
goals for machining, so you
can guide the machining
process when outsourced.
Classic and older engines
typically require extensive
machining and almost every
major component of engine,
including block, heads,
intake, crankshaft, and
pistons, require some sort of
machining and fitment. A
detailed, authoritative, and
thorough automotive engine-
machining guide for the hard-
core enthusiast has not been
available until now. Mike
Mavrigian, editor of Engine
Building Professional, walks
you through each important
machining procedure. A
stock 300-hp engine build
has far different
requirements than a

1,000-hp drag race engine,
and Mavrigian reveals the
different machining
procedures and plans
according to application and
engine design. The author
also shows you how to
inspect, measure, and
evaluate components so you
can provide astute guidance
and make the best machine
work choices. Machining
procedures included are
cylinder boring, align
boring/honing, decking,
valveseat cutting, cam tunnel
boring, and a multitude of
other services. In addition,
multi-angle valve jobs, setting
the valveseats, altering rocker
arm ratio, re-conditioning
connecting rods, and
machining and matching
valvetrain components are
also covered. Whether you're
an enthusiast engine builder
or prospective machining
student who wants to pursue
a career as an automotive
machinist, this book will
provide insight and in-depth
instruction for performing
the most common and
important machining
procedures.
