Prentice Hall Many of the challenges that decision-makers grapple with in relation to climate change are governance related. Planning and decisionmaking is evolving in ambiguous institutional environments, in which many key issues remain

unresolved, including relationships between different actors; funding arrangements; and the sources and procedures for vetting data. These issues are particularly acute at this juncture, as climate adaptation moves from broad climate risks are likely to planning processes to the management of infrastructure systems. Concrete decisions must be made. Adapting Infrastructure to Climate Change draws on case studies for in adaptation planning, of three coastal cities situated but are crucial as best within very different

The book examines how infrastructure managers and other stakeholders grappling with complex and uncertain make project-level decisions in practice, and how more effective decision-making can be supported. > Tens of thousands of mechanical engineers are engaged in the design, building, upgrading, and optimization of various material handling facilities. The peculiarity of material handling is that there are numerous technical solutions to any problem. The engineer 's personal selection of the optimal solution is as critical as the technical component. Michael Rivkin, Ph.D., draws on his decades of experience in design, construction, upgrading, optimization, troubleshooting, and maintenance throughout the world, to highlight topics such as:

• physical principles of various

material handling systems; • considerations in selecting technically efficient and environmentally friendly equipment; • best practices in upgrading and optimizing existing bulk material handling facilities;

• strategies to select proper equipment in the early phases of a new project. Filled with graphs, charts, and case studies, the book also includes bulleted summaries to help mechanical engineers without a special background in material handling find optimal solutions to everyday problems.
