Papua New Guinea is

commonly thought to be a land without railways. At the very least, railways do not immediately come to mind as a topic for historical research in Papua New Guinea.

Nevertheless, we set out to document and record something of the history of local railways in 1971, initially as individual projects.

Inevitably, our interest in the topic of railways brought us together and we have been working collaboratively on our research since 1980. At first the task was to identify and document the railways which have operated in Papua New Guinea. To our surprise, we now have records of some 150 railway lines, many of them small hand-pushed operations from a jetty to a copra store or around a sawmill. Others have yielded fascinating stories of more substantial enterprises and the endeavours of colonial pioneers at the frontier. As we brought the material together we began to realise that we not only had stories about small railway operations around the country, but we also had the basis for a new look at some basic elements of Papua New Guinea economic history.

Through the story of railways we had identified important themes which helped us learn about the economic conditions of today from the experience of the past.

American diners began to flock to Chinese restaurants more than a century ago, making Chinese food the first mass-consumed cuisine in the United States. By 1980, it had become the country's most popular ethnic cuisine. Chop Suey, USA offers the first comprehensive interpretation of the rise of Chinese food, revealing the forces that made it ubiquitous in the American gastronomic landscape and turned the country into an empire of consumption.

Engineered by a politically disenfranchised, numerically small, and economically exploited group, Chinese food's tour de America is an epic story of global cultural encounter. It reflects not only changes in taste but also a growing appetite for a more leisurely lifestyle. Americans fell in love with Chinese food not because of its gastronomic excellence but because of its affordability and convenience, which is why they preferred the quick and simple dishes of China while shunning its haute cuisine. Epitomized by chop suey, American Chinese food was a forerunner of McDonald's, democratizing the

once-exclusive dining-out experience for such groups as marginalized Anglos, African Americans, and Jews. The rise of Chinese food is also a classic American story of immigrant entrepreneurship and perseverance. Barred from many occupations, Chinese Americans successfully turned Chinese food from a despised cuisine into a dominant force in the restaurant market, creating a critical lifeline for their community. Chinese American restaurant workers developed the concept of the open kitchen and popularized the practice of home delivery. They streamlined certain Chinese dishes, such as chop suey and egg foo young, turning them into nationally recognized brand names.

MyProgrammingLab(tm) Beginner to Intermediate Programming in Java This book is designed to serve as a textbook and reference for programming in the Java language. Although it does include programming techniques, it is organized around the features of the Java language rather than any particular curriculum of programming techniques. The main audience is

undergraduate students who have not had extensive programming experience with the Java language. The introductory chapters are written at a level that is accessible to beginners, while the boxed sections of those chapters serve to quickly introduce more experienced programmers to basic Java syntax. Later chapters are still designed to be accessible, but are written at a level suitable for students who have progressed to these more advanced topics. This package includes MyProgrammingLab, an online homework, tutorial, and assessment program designed to work with this text to engage students and improve results. Within its structured environment, students practice what they learn, test their understanding, and pursue a personalized study plan that helps them better absorb course material and understand difficult concepts. MyProgrammingLab should only be purchased when required by an instructor. Please be sure you have the correct ISBN and Course ID. Tens of thousands of mechanical

engineers are engaged in the design, building, upgrading, and optimization of various material handling facilities. The peculiarity of material handling is that there are numerous technical solutions to any problem. The engineer's personal selection of the optimal solution is as critical as the technical component. Michael Rivkin, Ph.D., draws on his decades of experience in design, construction, upgrading, optimization, troubleshooting, and maintenance throughout the world, to highlight topics such as:

- physical principles of various material handling systems;
- considerations in selecting technically efficient and environmentally friendly equipment;
- best practices in upgrading and optimizing existing bulk material handling facilities;
- strategies to select proper equipment in the early phases of a new project.

Filled with graphs, charts, and case studies, the book also includes bulleted summaries to help mechanical engineers without a special background in material handling find optimal solutions to everyday problems.

Growing up in a small seaside town, Marcie Brooks dreams of owning a Mary Quant mini-skirt, the Beatles, and escape. Instead she's stuck in a dead-end job selling candy floss to tourists and with a crazy family. Her grandmother sees ghosts, her step-mother is unable to control her growing family and Marcie's father is usually in and out of prison or away 'working' for East End gangsters. Despite it all, Marcie adores her father, but Tony's light fingers and hard man reputation mean most people give the Brooks family a wide birth. Sometimes Marcie even wishes she had a respectable dad like her friend Rita; well-groomed, wealthy

by local standards and surprisingly attentive to a teenage girl. But when she discovers Tony may have had something to do with her real mother's death, Marcie finds her friend's father is more than just a shoulder to cry on... Mia Dolan's novels will appeal to all saga readers, especially fans of Katie Flynn .

Ressentiment—the hateful desire for revenge—plays a pivotal role in Nietzsche's *On the Genealogy of Morals*. Ressentiment explains the formation of bad conscience, guilt, asceticism, and, most importantly, it motivates the "slave revolt" that gives rise to Western morality's values. Ressentiment, however, has not enjoyed a thorough treatment in the secondary literature. This book brings it sharply into focus and provides the first detailed examination of Nietzsche's psychology of resentment. Unlike other books on the *Genealogy*, it uses resentment as a key to the *Genealogy* and focuses on the intriguing relationship between resentment and justice. It shows how resentment, despite its blindness to justice, gives rise to moral justice—the central target of Nietzsche's critique. This critique notwithstanding, the *Genealogy* shows Nietzsche's enduring commitment to the virtue of

non-moral justice: a commitment that grounds his provocative view that moral justice spells the 'end of justice'. The result provides a novel view of Nietzsche's moral psychology in the *Genealogy*, his critique of morality, and his views on justice.
