The Global Status  
Report on Road Safety  
2018, launched by WHO  
in December 2018,  
highlights that the  
number of annual road  
traffic deaths has

reached 1.35 million.  
Road traffic injuries  
are now the leading  
killer of people aged  
5-29 years. The burden  
is disproportionately  
borne by pedestrians,  
cyclists and  
motorcyclists, in  
particular those living  
in developing  
countries. The report  
suggests that the price  
paid for mobility is  
too high, especially  
because proven measures  
exist. Drastic action  
is needed to put these  
measures in place to  
meet any future global  
target that might be

set and save lives.

## Reciprocating Compressors: Springer

Motor trikes have been around since the dawn of motoring, with many starting out as utility vehicles or prototypes of cars. But trikes haven't died out or become mere relics of motoring history – companies all over the world still produce them today, and many will convert a motorcycle into a trike. Trikes are not only huge fun, but can also be a lifestyle choice. They are as diverse as the people who ride them, and this book illustrates the vast range of machines available.

---

The reader will discover a plethora of trike designs and layouts from the late 19th century to the present day. Some influential designs include Piaggio 's three wheeled vehicles, the Morgan three wheeler, and the Harley-Davidson Servicar. The book also features the products of companies that convert motorcycles into trikes, and shows some mass-produced examples that you can buy today. Then there are the weird and wonderful machines built by individual enthusiasts – a testament to their engineering skills and true eccentricity ...

This publication is a collection of essays on the biology of intracellular parasitisms where both bacterial and protozoan parasites are discussed. The juxtaposition of authors representing fields of research

emphasizes the many common problems facing intracellular parasites and the hosts that harbor them. In addition, numerous illustrations of how different parasites and host attempt to solve these problems in different ways are provided. The book includes one or more chapters on *Bdellovibrio*, *Chlamydia*, *Rickettsia*, *Coxiella*, *Legionella*, *Shigellae*, *Mycobacterium*, *Microsporidium*, *Plasmodium*, and *Toxoplasma*. The authors frequently speculate and generalize on the subject matter discussed.

Building a Custom Vintage Café Racer Motorcycle  
Children's Press(CT)

More than a memoir of a custom cafe racer build this book is a tribute to a teacher who inspired young people to be creative with their minds and capable with their hands. Growing up in Fargo, North Dakota in the 1970s and 80s, The Urban Monk had the opportunity to develop a love for machines, metal working and motorcycles. This book provides a glimpse into what life was like for the author and his young friends in Fargo during that time. It is also a poignant defense of industrial arts education in	public schools. After an over three year effort building a custom cafe racer in his spare time and documenting the entire process in videos shared with the world on his YouTube channel Urban Monk TV, the author tells the story of how this project became more than a custom motorcycle build - it became a tribute to his middle school Metal Shop teacher who inspired him to go on to a life time of peaceful meditation in his garage with a wrench in his hand. Anyone interested in motorcycles,	mechanics, do-it-yourself projects or a historical retrospective of life in 70s-80s Fargo will enjoy this pleasant read. <i>Principles of Engineering Thermodynamics, SI Edition</i> Who Dares Wins Provides an overall introduction to the welding process, illustrating most of the common equipment and work techniques for both the home and shop welding. <b>Data Structures &amp; Other Objects Using C++</b> John Wiley & Sons Gain a thorough understanding of today's tax concepts and ever-changing tax legislation with

## PRINCIPLES OF ENGINEERING

**THERMODYNAMICS** transforms the way students learn thermodynamics. While continuing to provide strong coverage of fundamental principles and applications, the book asks students to explore how changes in a particular parameter can change a device's or process' performance. This approach helps them develop a better understanding of how to apply thermodynamics in their future careers and a stronger intuitive feel for how the different components of

thermodynamics are interrelated. Throughout the book, students are encouraged to develop computer-based models of devices, processes, and cycles and to take advantage of the speed of Internet-based programs and computer apps to find thermodynamic data, just as practicing engineers do.
