"Fairies Afield" is a children's fantasy story written by Mary Louisa Molesworth, a well-known English children's author in the late nineteenth and early twentieth century. The book, published in 1902, is part of Molesworth's wide body of work, which includes a number of novels and stories for children. The story follows two siblings, Tottie and Tittie, as they go on a fantastic journey into the world of fairies. The children discover a secret road in the woods that leads them to the world of the fairies, where they

meet a variety of wonderful creatures and participate in quirky and enchanting adventures. The kids become friends with fairies, elves, and other mystical creatures as they explore this magical realm. Like children's books from the Victorian and Edwardian eras, the story is full with endearing moments and soft moral messages. The narratives of Molesworth highlight kindness, amazement, and inventiveness. "Fairies Afield" perfectly encapsulates the essence of beloved children's books with its themes of friendship, magic, and youthful innocence. For those who appreciate classic stories of magic and adventure, the novel is still enjoyable.

Common among moths is a mate-finding system in which females emit a pheromone that induces males to fly upwind along the pheromone plume. Since the chemical pheromone of the domesticated silk moth was identified in 1959, a steady increase in the number of moth species whose pheromone attractants have been identified now results in a rich base for review and synthesis. Pheromone Communication in Moths summarizes moth pheromone biology, covering the chemical structures used by the various lineages, signal production and perception, the genetic control of moth pheromone traits, interactions of pheromones with host-plant volatiles, pheromone dispersal and orientation, male pheromones and courtship, and

the evolutionary forces that have likely shaped pheromone signals and their role in sexual selection. Also included are chapters on practical applications in the control and monitoring of pest species as well as case studies that address pheromone systems in a number of species and groups of closely allied species. Pheromone Communication in Moths is an invaluable resource for entomologists, chemical ecologists, pest-management scientists, and professionals who study pheromone communication and pest management.
