Arvid Falk is a young and idealistic government worker who always wanted to be a poet. When a journalist writes a newspaper exposé based on Arvid's stories about his useless government department, Arvid is fired immediately. Starting afresh he sets out to explore every corner of the Swedish society, and the hypocrisy and corruption he finds shocks him. Walking the streets of Stockholm will never be the same again once this novel gets under your skin. Named the first modern Swedish novel, 'The Red Room' (1879) is wonderfully insightful and ironic. The Charles Dickens influence is undeniable and Strindberg's writing has been rightfully compared to that of Henrik Ibsen as well. August Strindberg (1849-1912) was a world-famous Swedish playwright, who, in Sweden, was known for his novels, poems, essays and paintings as well. Along with Henrik Ibsen, Hans Christian Andersen, Søren Kierkegaard and Selma Lagerlöf he is one of the all-time most influential authors of Scandinavia.

 What a rare mushroom can teach us about sustaining life on a fragile planet
 Matsutake is the most valuable mushroom in the world--and a weed that grows in human-disturbed forests across the Northern Hemisphere. Anna Lowenhaupt Tsing's account of these sought-after fungi offers insights into areas far beyond just mushrooms and addresses a crucial question: What manages to live in the ruins we have made? The *Mushroom at the End of the World* explores the unexpected corners of matsutake commerce, where we encounter Japanese gourmets, capitalist traders, Hmong jungle fighters, Finnish nature guides, and more. These companions lead us into fungal ecologies and forest histories to better understand the promise of cohabitation in a time of massive human devastation. The *Mushroom at the End of the World* delves into the relationship between

capitalist destruction and collaborative survival within multispecies landscapes, the prerequisite for continuing life on earth.

This report considers the biological and behavioral mechanisms that may underlie the pathogenicity of tobacco smoke. Many Surgeon General's reports have considered research findings on mechanisms in assessing the biological plausibility of associations observed in epidemiologic studies. Mechanisms of disease are important because they may provide plausibility, which is one of the guideline criteria for assessing evidence on causation. This report specifically reviews the evidence on the potential mechanisms by which smoking causes diseases and considers whether a mechanism is likely to be operative in the production of human disease by tobacco smoke. This evidence is relevant to understanding how smoking causes disease, to identifying those who may be particularly susceptible, and to assessing the potential risks of tobacco products.
