Hal Wallis (1898-1986) might not be as well known as David O. Selznick or Samuel Goldwyn, but the films he produced—Casablanca, Jezebel, Now, Voyager, The Life of Emile Zola, Becket, True Grit, and many other classics (as well as scores of Elvis movies)—have certainly endured. As producer of numerous films, Wallis made an indelible mark on the course of America's film industry, but his contributions are often overlooked. Bernard Dick offers the first comprehensive assessment of the producer's incredible career. A former office boy and salesman, Wallis first engaged with the film

business as the manager of a Los Angeles movie theater in 1922. He attracted the notice of the Warner brothers, who hired him as a publicity assistant. Within three months he was director of the department, and appointments to studio manager and production executive quickly followed. Wallis went on to oversee dozens of productions and formed his own production company in 1944. Dick draws on numerous sources such as Wallis's personal production files and exclusive interviews with many of his contemporaries to finally tell the full story of his illustrious career. Dick combines his knowledge of behind-the-scenes Hollywood with fascinating anecdotes to create a portrait of one of Hollywood's early power players.

#### **Modern Peoplehood** John Wiley & Sons

A "compelling indictment of the news media's role in covering up errors and deceptions" (*The New York Times Book Review*) due to the underlying economics of publishing—from famed scholars Edward S. Herman and Noam Chomsky. With a new introduction. In this pathbreaking work, Edward S. Herman and Noam Chomsky show that, contrary to the usual image of the news media as cantankerous, obstinate, and ubiquitous in their search for truth and defense of justice, in their actual practice they defend the economic, social, and political agendas of the privileged groups that dominate domestic society, the state, and the global order. Based on a series of case studies—including the media's dichotomous treatment of "worthy" versus "unworthy" victims, "legitimizing" and "meaningless" Third World elections, and devastating critiques of media coverage of the U.S. wars against Indochina—Herman and Chomsky draw on decades of criticism and research to propose a Propaganda Model to explain the media's behavior and performance. Their new introduction updates the Propaganda Model and the earlier case studies, and it discusses several other applications. These include the manner in which the media covered the passage of the North American Free Trade Agreement and subsequent Mexican financial meltdown of 1994-1995, the media's handling of the protests against the World Trade Organization, World Bank, and International Monetary Fund in 1999 and 2000, and the media's treatment of the chemical industry and its regulation. What emerges from this work is a powerful assessment of how propagandistic the U.S. mass media are, how they systematically fail to live up to their self-image as providers of the kind of information that people need to make sense of the world, and how we can understand their function in a radically new way.

They draw on a wide array of case studies - from cooking stoves to missile systems, from 15th-century Portugal to today's AI labs - to outline an original research program based on a synthesis of ideas from the social studies of science and the history of technology. Together they affirm the need for a study of technology that gives equal weight to technical, social, economic, and political questions"--Back cover.

This open access book describes marked advances in imaging technology that have enabled the visualization of phenomena in ways formerly believed to be completely impossible. These technologies have made major contributions to the elucidation of the pathology of diseases as well as to their diagnosis and therapy. The volume presents various studies from molecular imaging to clinical imaging. It also focuses on innovative, creative, advanced research that gives full play to imaging technology in the broad sense, while exploring cross-disciplinary areas in which individual research fields interact and pursuing the development of new techniques where they fuse together. The book is separated into three parts, the first of which addresses the topic of visualizing and controlling molecules for life. The second part is devoted to imaging of disease mechanisms, while the final part comprises studies on the application of imaging technologies to diagnosis and therapy. The book contains the proceedings of the 12th Uehara International Symposium 2017, "Make Life Visible" sponsored by the Uehara Memorial Foundation and held from June 12 to 14, 2017. It is written by leading scientists in the field and is an open access publication under a CC BY 4.0 license.

From the late fifteenth to the nineteenth centuries, the Hispanic Monarchy was one of the largest and most diverse political communities known in history. At its apogee, it stretched from the Castilian plateau to the high peaks of the Andes; from the cosmopolitan cities of Seville, Naples, or Mexico City to Santa Fe and San Francisco; from Brussels to Buenos Aires and from Milan

to Manila. During those centuries, Spain left its imprint across vast continents and distant oceans contributing in no minor way to the emergence of our globalised era. This was true not only in an economic sense—the Hispano-American silver peso transported across the Atlantic and the Pacific by the Spanish fleets was arguably the first global currency, thus facilitating the creation of a world economic system—but intellectually and artistically as well. The most extraordinary cultural exchanges took place in practically every corner of the Hispanic world, no matter how distant from the metropolis. At various times a descendant of the Aztec nobility was translating a Baroque play into Nahuatl to the delight of an Amerindian and mixed audience in the market of Tlatelolco; an Andalusian Dominican priest was writing the first Western grammar of the Chinese language in Fuzhou, a Chinese city that enjoyed a trade monopoly with the Spanish Philippines; a Franciscan friar was composing a piece of polyphonic music with lyrics in Quechua to be played in a church decorated with Moorish-style ceilings in a Peruvian valley; or a multi-ethnic team of Amerindian and Spanish naturalists was describing in Latin, Spanish and local vernacular languages thousands of medicinal plants, animals and minerals previously unknown to the West. And, most probably, at the same time that one of those exchanges were happening, the members of the School of Salamanca were laying the foundations of modern international law or formulating some of the first modern theories of price, value and money, Cervantes was writing *Don Quixote*, Velázquez was painting *Las Meninas*, or Goya was exposing both the dark and bright sides of the European Enlightenment. Actually, whenever we contemplate the galleries devoted to Velázquez, El Greco, Zurbarán, Murillo or Goya in the Prado Museum in Madrid; when we visit the National Palace in Mexico City, a mission in California, a Jesuit church in Rome or the Intramuros quarter in Manila; or when we hear Spanish being spoken in a myriad of accents in the streets of San Francisco, New Orleans or Manhattan we are experiencing some of the past and present fruits of an always vibrant and still expanding cultural community. As the reader can infer by now, this book is about how Spain and the larger Hispanic world have contributed to world history and in particular to the history of civilisation, not only at the zenith of the Hispanic Monarchy but throughout a much longer span of time.

**Networks, Labour and Migration among Indian Muslim Artisans** Springer

"[A] most impressive achievement by an extraordinarily intelligent, courageous, and—that goes without saying—'well-read' mind. The scope of this work is enormous: it provides no less than a comprehensive, historically grounded theory of 'modern peoplehood,' which is Lie's felicitous umbrella term for everything that goes under the names 'race,' 'ethnicity,' and 'nationality.'" Christian Joppke, *American Journal of Sociology* "Lie's objective is to treat a series of large topics that he sees as related but that are usually treated separately: the social construction of identities, the origins and nature of modern nationalism, the explanation of genocide, and racism. These multiple themes are for him aspects of something he calls 'modern peoplehood.' His mode of demonstration is to review all the alternative explanations for each phenomenon, and to show why each successively is inadequate. His own theses are controversial but he makes a strong case for them. This book should renew debate." Immanuel Wallerstein, Yale University and author of *The Decline of American Power: The U.S. in a Chaotic World*

*Networks, Labour and Migration among Indian Muslim Artisans* provides an ethnography of life, work and migration in a North Indian Muslim-dominated woodworking industry. It traces artisanal connections within the local context, during migration within India, and to the Gulf, examining how woodworkers utilise local and transnational networks, based on identity, religiosity, and affective circulations, to access resources, support and forms of mutuality. However, the book also illustrates how liberalisation, intensifying forms of marginalisation and incorporation into global production networks have led to spatial pressures, fragmentation of artisanal labour, and forms of enclavement that persist despite geographical mobility and connectedness. By working across the dialectic of marginality and connectedness, Thomas Chambers thinks through these complexities and dualities by providing an ethnographic account that shares everyday

---

life with artisans and others in the industry. Descriptive detail is intersected with spatial scales of 'local', 'national' and 'international', with the demands of supply chains and labour markets within India and abroad, with structural conditions, and with forms of change and continuity.

Empirically, then, the book provides a detailed account of a specific locale, but also contributes to broader theoretical debates centring on theorisations of margins, borders, connections, networks, embeddedness, neoliberalism, subjectivities, and economic or social flux.
