M å nga sj ä lvklarheter i v å rt digitala samh ä lle ä r beroende av Internet f ö r att fungera. Allt fr å n smarta d ö rrar f ö r hemtj ä nster, till sj ä lvscanningsapparaterna p å ICA, till nyare bilar, moderna tillverkningsrobotar, telefoner och aff ä rssystem. Den h ä r licentiatavhandlingen reder ut vad Internet ä r, hur det styrs och vad det har f ö r praktiska konsekvenser. Tidigare

forskning finns bland annat inom telekommunikation d ä r Internet liknas vid andra telekommunikationstj ä nster, s å som kabel-TV eller mobiltelefoni, och inom digitalisering b å de inom management och informationssystem d ä r Internet i det n ä rmaste tas f ö r givet som teknisk infrastruktur. H ä r tar jag en ansatts d ä r jag f ö rklarar Internet ur ett kombinerat tekniskt och organisatoriskt perspektiv. Studien ä r principiellt uppdelad i tre delar. Den f ö rsta delen fokuserar p å att begreppsm ä ssigt hitta ett s ä tt att diskutera Internet utan att essentiella aspekter faller bort, s å som styrningen eller konsekvenser av den tekniska designen. Jag landar i att Internet ä r b å de ett tekniskt och ett organisatoriskt fenomen. Tekniskt i bem ä rkelsen att det handlar om digital paketbaserad kommunikation (dvs att olika paket kan ta olika v ä g och att det

inte finns ett beroende på en viss specifik datorteknik, som är orsaken till väg, eller "krets"), vilket kan särskiljas Internets lager-design där man från exempelvis kretskopplad kommunikation (dvs en specifik vägförändring på andra lager än sitt eget sändare till mottagare) eller rent analog kommunikation. I denna tekniska dimension är Internet förhållandevis likt klassisk telekommunikation såsom kabel-TV och mobiltelefoni, och förlitar sig på best-effort paketbaserad kommunikation. I den andra dimensionen, styrning och organisation, är Internet ett explicit bottom-up fenomen som styrs med andra principer och ideal än klassisk telekommunikation. Till sin utformning är denna minsta möjliga koordination som krävs för att möjliggöra koordination av de tekniska unika identifierare som behövs för att Internet ska fungera (dvs idag DNS- och BGP-flörens av protokoll för användning av namn och nummer på Internet). Båda dimensionerna, de organisatoriska och tekniska, följer samma designprinciper, och generellt är det meningsfullt att se Internet som en ekologi av aktörer snarare än en organisation i strikt teoretiska termer (exempelvis finns ingen tydlig övergripande strategi, organisationsnummer eller lönebetalare). Det är dessa designprinciper, som ligger väl i linje med systemarkitektursprinciper för

(generellt) inte ska bry sig om vad som händer på andra lager än sitt eget (beskrivet som "separation of concerns" eller i dubbel negation "high cohesion" i texten) samt att ha en minimalistisk ansats till koordinering och enbart koordinera eller skapa beroenden mellan enheter (både tekniskt och organisatoriskt) när det verkligen behövs (beskrivet som "minimum coordination" eller "low coupling" i texten). Den andra delen fokuserar på hur Internet kan socialt påverkas eller förändras till något annat, eller till något med en annan funktion sett som en styrd organisation. Jag använder begreppet social robusthet, som motpol till teknisk robusthet som i hur man tekniskt kan förstå Internet, för att diskutera dessa aspekter. Slutsatserna här mynnar ut i att Internets explicita bottom-up och problemsuppdelningsdesign gör det märkbart svårt för någon att medvetet påverka Internet för att ändra dess beskaffenhet, och dessutom visar jag att även om man praktiskt lyckas ta över de formellt beslutande råden (exempelvis ICANNs och IETFs styrelser) så finns det inga formella eller praktiska hinder för att bara ignorera dem (dvs switching costs

för just ICANN eller IETF är låga, om än tekniskt omständligt med att konfigurera om rötter och routing-tabeller, och betydligt enklare än att gå från IPv4 till IPv6 då utrustning kan behövas ersättas och därmed en betydligt högre switching cost). Med andra ord, det är enklare att byta ut Internets koordinerare än att byta ut Internet mot något som fungerar annorlunda. Därremot är den rådande politiska världsordningen ett hot mot Internet, eftersom den regelstyrda och koordinerade världsordningen inte längre är lika självklar som den varit tidigare. Den tredje och sista studien fokuserar på neutralitet, dvs rätten nättverksoperatörer har att fånga värde i andra dimensioner än trafikmängd, som en praktiskt effekt av hur Internet styrs och fungerar. Det primära praktiska bidraget är att neutralitet inte får ses som enbart en reglerings och lagstiftningfråga utan det är mer relevant att prata om i termer av neutralitet i praktiken. I den bemärkelsen är lagstiftningens vara eller inte vara mindre intressant än praktisk neutralitets vara eller inte vara och en tyngdpunktsförskjutning i den offentliga debatten hade fört diskussionen närmare hur Internet fungerar. Sammanfattningsvis ger

Internets designprinciper att marknads krafter, och ej direkt reglering, ska möjliggöra neutralitet. För att förtydliga, tanken är att det ska finnas konkurrens inom de flesta nivåer eller lager, och att det är av vikt att det finns konkurrens rakt igenom så att en kundvilja för paketneutralitet på tjänstenivå även på verkar nätagar- och infrastrukturnivå, så att det är användarnas efterfrågan som leder till neutralitet (om den användarviljan finns). Dock kan det mycket väl vara så att man som användare inte är intresserad av neutralitet och då ska tjänsteleverantörer, nätagare och infrastrukturoperatörer inte heller tvingas vara neutrala genom lagstiftning då det går stick i stäv med designprinciperna. Inte heller ska en grupps vilja kring neutralitet påverka andras möjligheter att välja. Genomgående identifierar jag två kolliderande världs bilder, den distribuerade regelstyrda och koordinerade ordningen i sitt perspektiv med sina förkämpar, och den mer integrerade och suveräna världsordningen med sitt perspektiv och sina förkämpar. Rent praktiskt uppfyller Internet en önskad funktion i den tidigare men ej i den senare, då Internet designmässigt är byggt för att tillåta

snarare än kontrollera och bestämma. Exempelvis finns det inte inbyggda (tekniska) mekanismer i Internet för att till exempel möjliggöra statlig övervakning eller kontroll av material som finns tillgängligt, och då ligger det mer i statens intresse att ha kontrollerade telekommunikationstjänster, så som kabel-TV, mobiltelefoni och liknande lösningar där man inte helt enkelt kan lägga på ett "extra lager" för att uppnå kryptering, anonymitet eller tillgång till andra tjänster. I texten använder jag perspektiven tillsammans med teknologi, marknader och byråkrati för att fånga upp dynamiken och strömningarna i Internet-ekologin och jämför med tekniska samhällsförändringar, som exempelvis järnvägsnät, postverk och finansiella marknader. Jag konstaterar att Internet har varit styrt av teknologiskt baserade värderingar, till skillnad från de andra exemplen som i huvudsak har utformats av dynamiken mellan byråkrati och marknad. I denna mån förelär jag att teknologi kan användas som strömning och motperspektiv till den klassiska uppställningen med byråkrati och marknad för att beskriva fenomen i digitaliseringens tidsålder. Avhandlingen sätter även pågående trender i ett bredare perspektiv mot både organisation och teknik, och trycker på

vikten av att första delarna var för sig och tillsammans för att på ett rikare sätt måla upp helheten. The modern society is to a large extent Internet-dependent. Today we rely on the Internet to handle communication for smart doors, self-scanning convenience stores, connected cars, production robots, telephones and ERP-systems. The purpose of this thesis is to unbundle the Internet, its technology, its coordination, and practical and theoretical consequences. Earlier research has, in telecommunications, focused on the Internet as one of many potential telecommunications services, such as cellphones or cable-TV, and the management and information systems field has by and large treated the Internet as black-boxable infrastructure. This thesis explains the Internet from the combined perspectives of technology and coordination. This text contains three empirical studies. The first is focused on conceptualizing and discussing the Internet in a meaningful way using both technology and coordination frameworks. I unceremoniously conclude that the Internet is both a technological and a coordination phenomenon and neither of these aspects can be ignored. The Internet is technological in that it concerns digital packet switched digital

communication (as opposed to circuit switched) or purely analog communications. The technological dimension of the Internet is similar in its constituency to classical telecommunications networks, and has best-effort mechanisms for packet delivery. In the other dimension, coordination, the Internet is an explicit bottom-up phenomenon minimally coordinated (or governed) by other ideals than classical telecommunications networks and systems. At its core this least necessary coordination concerns technical unique identifiers necessary for inter-network communication (in practice today manifested as naming with the DNS protocol suite, and numbering with the BGP protocol suite). Both dimensions follow similar design characteristics; the design of the technical Internet is similar to the design of the coordination of the Internet. These design principles, which are well aligned with software design principles, is the cause of the Internet 's layered design (" separation of concerns " in practice) and minimal view of coordination (the " least coordinated Internet "). In general terms it is fruitful to view the Internet and involved actors as an ecology, rather than one organization or entity in need of governance or control. The second study looks at the social

resilience of the Internet. That is, is it possible through social means to change what the Internet is or can be viewed as. I use social resilience as a counterpart to technical resilience, i.e. resilience to technical interference. In essence, the bottom-up and separations of concerns design of the coordination aspect of the Internet minimizes possible influence of actors intent on mission disruption. I also practically show that even a take-over of the central councils have little effect the constituency of the Internet, since these councils are not invested with formal powers of enforcement. This thesis suggests that the cost of switching from ICANN and IETF to another set of organizations is quite low due to the nature of the coordination of the Internet, compared to for example, switching all equipment to IPv6 capable equipment. However, the current political situation is a threat to the current Internet regime, since an international and rule-based world order is no longer on all states ' agendas. The final empirical study focus on the practical and theoretical implications of the Internet on the case of net neutrality. The primary contribution is that de facto and de jure net neutrality differ in practice, and as such de facto net neutrality deserves more attention. Also, I suggest that any regulation, either for or

against net neutrality, is problematic, since such regulation would interfere with the inherent coordination mechanisms of the Internet. As such regulation should focus on providing the necessary markets for Internet function given the coordination and design of the Internet. As a net neutrality example, net neutral Internet access options should exist as part of a natural service offering if wanted by customers, not due to direct regulation. Throughout the thesis I identify two colliding world orders, both in terms of digital communication networks and terms of organizing society in general: the rule-based and coordinating order with its champions, and the integrated or sovereign order with its champions. In practical terms, the Internet can be considered a want in the former (the distributed perspective), but not the later (the integrative perspective), since the Internet lacks inherent (technical) controls for surveillance and content control which are necessary in a world order where borders are important. Regardless of if that importance stems from state oversight or intellectual property rights legislation. I use these perspectives together with technology, markets and bureaucracy to catch the dynamics of the Internet ecology. I then compare these dynamics with other

technological and societal phenomena, such as railway networks, postal services and financial markets. And conclude that the Internet (as conceptualized in this thesis) can best be explained by technological values, in opposite to the other examples which can best be explained by the dynamics of markets and bureaucracies without any real influence of the values of technology. As such, I suggest that the classical frame of markets and bureaucracy can fruitfully be expanded with technology to better explain the Internet and similar digitization phenomena. This thesis puts current trends in a broader perspective based on technology and organization, where the two perspectives together better can draw the full picture in a rich fashion.

A Survey of Motorcycle Use in the Forest Service

Dorling Kindersley Ltd
Twentieth-century Spanish poetry has received comparatively little attention from critics writing in English. Andrew Debicki now presents the first English-

language history published in the United States to examine the sweep of modern Spanish verse. More important, he is the first to situate Spanish poetry in the context of European modernity, to trace its trajectory from the symbolists to the postmodernists. Avoiding the rigid generational schemes and catalogs of names found in traditional Hispanic literary histories, Debicki offers detailed discussions of salient books and texts to construct an original and compelling view of his subject. He demonstrates that contemporary Spanish verse is rooted in the modern tradition and poetics that see the text as a unique embodiment of complex experiences. He then traces the evolution of that tradition in the early decades of the century and its gradual disintegration from the 1950s to the present as Spanish poetry came to reflect features of the postmodern, especially

the poetics of text as process rather than as product. By centering his study on major periods and examining within each the work of poets of different ages, Debicki develops novel perspectives. The late 1960s and early 1970s, for example, were not merely the setting for a new aestheticist generation but an era of exceptional creativity in which both established and new writers engendered a profound, intertextual, and often self-referential lyricism. This book will be essential reading for specialists in modern Spanish letters, for advanced students, and for readers inter-ested in comparative literature. *Unit Operations* Rod Young

In Unit Operations, Ian Bogost argues that similar principles underlie both literary theory and computation, proposing a literary-technical theory that can be used to analyze particular videogames.

Moreover, this approach can be applied beyond videogames: Bogost suggests that any medium—from videogames to poetry, literature, cinema, or art—can be read as a

configurative system of discrete, interlocking units of meaning, and he illustrates this method of analysis with examples from all these fields. The marriage of literary theory and information technology, he argues, will help humanists take technology more seriously and help technologists better understand software and videogames as cultural artifacts. This approach is especially useful for the comparative analysis of digital and nondigital artifacts and allows scholars from other fields who are interested in studying videogames to avoid the esoteric isolation of "game studies." The richness of Bogost's comparative approach can be seen in his discussions of works by such philosophers and theorists as Plato, Badiou, Zizek, and McLuhan, and in his analysis of numerous videogames including Pong, Half-Life, and Star Wars Galaxies. Bogost draws on object technology and

complex adaptive systems theory for his method of unit analysis, underscoring the configurative aspects of a wide variety of human processes. His extended analysis of freedom in large virtual spaces examines Grand Theft Auto 3, The Legend of Zelda, Flaubert's Madame Bovary, and Joyce's Ulysses. In Unit Operations, Bogost not only offers a new methodology for videogame criticism but argues for the possibility of real collaboration between the humanities and information technology.

Welcome to the world of the naked corporation. Transparency is revolutionizing every aspect of our economy and its industries and forcing firms to rethink their fundamental values. We are in an extraordinary age where businesses must make themselves clearly visible to shareholders, customers,

employees, partners, and society. Financial data, employee grievances, internal memos, environmental disasters, product weaknesses, international protests, scandals and policies, good news and bad; all can be seen by anyone who knows where to look. Don Tapscott, bestselling author and one of the most sought after strategists and speakers in the business world, is famous for seeing into the future and pointing out both its forest and its trees. David Ticoll, visionary researcher, columnist, and consultant, has identified countless breakthrough trends at the intersection of technology and business strategy. These two longtime collaborators now offer a brilliant guide to the new age of openness. In The Naked Corporation, they explain how the new transparency has caused a power shift toward customers, employees, shareholders, and other

stakeholders; how and where information has exploded; and how corporations across many industries have seized on transparency not as a challenge but as an opportunity. Drawing on such examples as Shell Oil's reinvention of itself as an environmentally focused business, to Johnson & Johnson's longstanding and carefully nurtured reputation as a company worthy of trust—as well as little-known examples from pharmaceuticals, insurance, high technology, and financial services—Tapscott and Ticoll offer invaluable advice on how to lead the new age, rather than simply react to it. The Naked Corporation is a book for managers, employees, investors, customers, and anyone who cares about the future of the corporation and society.
