From one of America's best-known economists, the one book anyone who wants to

understand the economy needs to read.

Handbook of Consumer Psychology Wiley

Victor Rios has a vibrant reputation as America's leading ethnographer of Latino youth. His personal storygoing from drug pusher (selling heroin on the streets as a teenager) to a hard worker at a mechanic shop within a matter of weeksshow how he stands in the place of the Latino youths he studies. His story underscores the degree to which delinquent urban youths can become adaptable, fluid, amenable individuals, able to shift their views of the world as well as their actions. Rios rejects the old storyline that said gangs are bad and they do bad things because they are bad people. Kids on the street, he argues, can drift between different identities, indeed,

they can shift seamlessly between responsible and deviant displays within a few hours time. The key to understanding gang-associated youth lies in analysis of the way authority figures (teachers and police officers) interact with young people. The kids need caring adults who offer tangible resources. Story and characters are always front-and-center in Rios's narrative: Jorge, Mark, Wilson, and others, are boys we get to know as they negotiate day-to-day life on the streets and across institutional settings. We learn a great deal about Cholo subculture, the clothing and hairstyles, and the argot that are adopted by Latino youth in response to the forces that seek to marginalize or punish them. The crisis of a perceived epidemic of police brutality in our

post-Ferguson era is a product of culture in Rios's view: contested symbols, negative interactions, and day-to-day encounters that freeze youth identities as gang-associated, and that freeze authority identities as negative shapers of youth attitudes and actions are the dynamic. Fear of young males of color leads to police misreading and dehumanizing of young black and Latino men. Rios raises our awareness of how this dynamic operates by studying his subjects whole: following young gang members into their schools, their homes, their community organizations, their detention facilities, and watching them interact with police, watching them grow up to become fathers, get jobs, get rap sheets. Get killed. This book will be a landmark contribution to the social psychology of poverty and crime."

Textbook of Disaster

Psychiatry University of Chicago Press

A major new guide to a psychological condition that affects millions of North Americans written by Dr. Jerold Kreisman, a top expert on Borderline Personality Disorder, this important,

incisive book delivers the latest information on the disorder, which typically manifests itself through anger, abuse, addictions, and reckless impulsivity-behaviors that can have a devastating impact on family and friends.

NUMB3RS HPN Books

The bestselling citizen's guide to economics Basic Economics is a citizen's guide to economics, written for those who want to understand how the

economy works but have no interest in jargon or equations. Bestselling economist Thomas Sowell explains the general principles underlying different economic systems: capitalist, socialist, feudal, and so on. In readable language, he shows how to critique economic policies in terms of the incentives they create, rather than the goals they proclaim. With clear explanations of the entire field, from rent control and the rise and fall of businesses to the international balance of payments, this is the first book for anyone who wishes to understand how the economy functions. This fifth edition includes a new chapter explaining the reasons for large differences of wealth and income between nations. Drawing on lively examples from around the world and from centuries of history, Sowell explains basic economic principles for the general public in plain English.

The world and China's place in it have been transformed over the past year. The pressures for change have come from the most severe global financial crisis ever. The crisis has accelerated China's emergence as a great power. But China and its global partners have yet to think or work through the consequences of its new position for the governance of world affairs. China's New Place in a World in Crisis discusses and provides in-depth analysis of the following questions. How have China's growth prospects been affected by the global crisis? How will the crisis and China's response to it impact China's major domestic issues, such as industrialisation, urbanisation and the reform of the state-owned sector of the economy? How will the crisis and the international community's response to it affect the rapidly emerging new international order? What will be China's, and other major developing countries', new role? Can China and the world find a way of breaking the nexus between economic growth and environmental sustainability - especially on the issue of climate change? The Film Book CQ Press

The second edition of the fun and fascinating guide to the main ideas of the Austrian School of economics, written in sparkling prose especially for the non-economist. Gene Callahan shows that good economics isn't about government planning or statistical models. It's about human beings and the choices they make in the real world. This may be the most important book of its kind since Hazlitt's *Economics in One Lesson*. Though written for the beginner, it has been justly praised by scholars too, including Israel Kirzner, Walter Block, and Peter Boettke. Gene Callahan is a software technology professional in Connecticut, an adjunct scholar of the Mises Institute, and a commentator on economics issues in venues such as *Marketplace* and *The Free Market*. This is his first book. Israel M. Kirzner (New York University) "Even a cursory examination of this book is sufficient to impress the reader that we have here a remarkably well written exposition for the layman of the highlights of Austrian Economics." Peter J. Boettke (George Mason University) "Written in a jargon less and engaging style, Callahan's work provides the most

comprehensive introduction to modern Austrian economics currently available to the intelligent layman." Walter Block (Loyola University, New Orleans) "I dont toss around compliments like this lightly, but the passion, eloquence and sheer witty writing style of this author is also reminiscent of Rothbard. I plan to use it in all of my future intro courses." Barrons calls Economics for Real People "a terrific new book on economic theory." "If I were teaching an introductory course in economics," writes Gene Epstein (Dec. 2, 2002), "I'd assign Gene Callahan's Economics for Real People: An Introduction to the Austrian School. I also commend it to folks in search of a good read on the joys of economic insight." He continues: "Callahan's reference to real people consciously echoes the more austere title of Austrian economist Ludwig von Mises magnum opus, Human Action. For as the author explains, economics is the study of how real people act to relieve dissatisfaction. For example, dissatisfied with the inconvenience of barter, folks start using more marketable goods for indirect exchange,

a practice that eventually results in one or two commodities becoming the preferred medium of exchange, usually gold or silver. "The first half of the book sets forth basic principles; the second shows how the myriad ways of interfering with the market make matters worse, sometimes much worse. Callahan cites the health care crisis as a prime example of how the problems resulting from one intervention tend to lead to calls for other interventions to fix those problems. While the hated HMOs are generally viewed as creatures of capitalism, these strange entities are just a response to the soaring costs arising from the government instituted system of third party payments." "We do not see AMOs in the automobile industry or CMOs in the computer business, observes Callahan. That insight cuts to the core of what is really going on. Auto dealers might also find their professional lives unbearable, just as many physicians do, if AMOs told them how to service their customers. But happily, the disease of third party payments has only infected health care." "On the issue of government subsidizing

business to build things, the author quotes from a review by Newt Gingrich of a book about the transcontinental railroad, in which the former congressman celebrates the public private partnership without which the railroad could not have been built for another generation. To which Callahan responds, Gingrich simply assumes that a transcontinental railroad ought to have come before the alternatives that entrepreneurs might have created with those same resources." Technical Analysis of the Currency Market Penguin UK The companion to the hit CBS crime series Numb3rs presents the fascinating way mathematics is used to fight real-life crime Using the popular CBS prime-time TV crime series Numb3rs as a springboard, Keith Devlin (known to millions of NPR listeners as the Math Guy on NPR's Weekend Edition with Scott Simon) and Gary Lorden (the principal math advisor to Numb3rs) explain real-life mathematical techniques used by the FBI and other law enforcement agencies to catch and convict criminals. From forensics to counterterrorism, the Riemann hypothesis to

image enhancement, solving murders to beating casinos, Devlin and Lorden present compelling cases that illustrate how advanced mathematics can be used in state-of-the-art criminal investigations.

Human Targets Little, Brown
Often written during imprisonment in Allied War camps by former German officers, with their memories of the World War fresh in their minds, The Foreign Military Studies series offers rare glimpses into the Third Reich. In this study Oberst a.D. Wilhem Willemar discusses his recollections of the climatic battle for Berlin from within the Wehrmacht. "No cohesive, overall plan for the defense of Berlin was ever actually prepared. All that existed was the stubborn determination of Hitler to defend the capital of the Reich. Circumstances were such that he gave no thought to defending the city until it was much too late for any kind of advance planning. Thus the city's defense was characterized only by a mass of improvisations. These reveal a state of total confusion in which the pressure of the enemy, the organizational chaos on the German side, and the catastrophic shortage of human and material resources for the defense combined with disastrous effect. "The author describes these conditions in a clear, accurate report which I rate very highly. He goes beyond the more narrow concept of planning and offers the first German account of the defense of Berlin to be based

upon thorough research. I attach great importance to this study from the standpoint of military history and concur with the military opinions expressed by the author. " -Foreword by Generaloberst a.D. Franz Halder. Contemporary Strategy Analysis Text Only Basic Civitas Books
Proven currency-specific trading strategies from one of today's top currency analysts "If you trade currency, then you need to have this book on your desk. It's the only book you need for technical analysis of the fastest-moving market on the planet." -Rob Booker, Currency Trader, W.R. Booker & Company "In plain English, Schlossberg lays out the basics in using technical analysis to trade foreign currencies, from the fundamentals of how the FX market works to the variety of technical strategies and trade management techniques traders can employ. Along the way, he offers entertaining examples and observations as well as simple, easy-to-read charts and diagrams. Anyone interested in getting started in the hugely popular FX market would do well to begin with this book." -Sarah Rudolph, Executive Editor, SFO Magazine "Boris Schlossberg has done a fabulous job with this book. It's packed with insightful tips and strategies that are sure to save traders a lot of time and money." -Cory Janssen, CoFounder,

Investopedia.com "Schlossberg's book is a great resource for traders just starting out in currency markets. His focus on simplicity is critical for a new trader's education on how to make money." -Andrew B. Busch, Global FX Strategist, BMO Financial Group
Everyone's an Author
University of Chicago Press
"How do we think?" N. Katherine Hayles poses this question at the beginning of this bracing exploration of the idea that we think through, with, and alongside media. As the age of print passes and new technologies appear every day, this proposition has become far more complicated, particularly for the traditionally print-based disciplines in the humanities and qualitative social sciences. With a rift growing between digital scholarship and its print-based counterpart, Hayles argues for contemporary technogenesis—the belief that humans and technics are coevolving—and advocates for what she calls comparative media studies, a new approach to locating digital work within print traditions and vice versa. Hayles examines the evolution of the field from the traditional humanities and how the digital

humanities are changing academic scholarship, research, teaching, and publication. She goes on to depict the neurological consequences of working in digital media, where skimming and scanning, or “hyper reading,” and analysis through machine algorithms are forms of reading as valid as close reading once was. Hayles contends that we must recognize all three types of reading and understand the limitations and possibilities of each. In addition to illustrating what a comparative media perspective entails, Hayles explores the technogenesis spiral in its full complexity. She considers the effects of early databases such as telegraph code books and confronts our changing perceptions of time and space in the digital age, illustrating this through three innovative digital productions—Steve Tomasula’s electronic novel, *TOC*; Steven Hall’s *The Raw Shark Texts*; and Mark Z. Danielewski’s *Only Revolutions*. Deepening our understanding of the extraordinary transformative powers digital technologies have placed in the hands of humanists, *How We Think*

presents a cogent rationale for tackling the challenges facing the humanities today.

Strategies Apress

Students today are writing more than ever. Everyone's an Author bridges the gap between the writing students already do--online, at home, in their communities--and the writing they'll do in college and beyond. It builds student confidence by showing that they already know how to think rhetorically and offers advice for applying those skills as students, professionals, and citizens. Because students are also reading more than ever, the third edition includes new advice for reading critically, engaging respectfully with others, and distinguishing facts from misinformation. Also available in a version with readings.
