Two Turtle Doves David and Charles Dominic da Silva, in his late fifties, has terminal cancer. This diagnosis prompts him to return to the diaries he kept from his boarding school years into his early thirties. These notebooks conjure lost tableaux of Britain in the 1960s, 70s and early 80s: with the emotional repression and genteel rural poverty of his youth, through to upbeat accounts of later joyful excess and profound friendship. Dominic has the chameleon qualities of the true survivor: by the age of thirty, he has carved out a promising career and is married to a wealthy young lawyer, herself the very epitome of upward mobility. But he 's cursed, it seems, by wanting everything to which he 's supremely ill-suited. A quarter of a century later, it all looks very different. His has, in many ways, been a thwarted existence, and Dominic 's diaries chart his lurching journey towards self-recognition — from grand house parties to a hostel for the homeless, from an apparently perfect life to arrest and ignominy. Under the Table is a powerful homage to truth and friendship — and a recognition of the toughness upon which both depend.

"The sciences as a whole are slowly but gradually drifting away from life and are only returning after a detour". Goethe Detours should be avoided. The picture we are presenting here of the current theory in phenolic resin chemistry and the technical application of phenolic resins is based on day-to-day experiences in research, production and marketing, however, with the background of economic relevance. This book, then, is not to be regarded as a systematic collection and evaluation of the literature, although the literature up to July, 1978 has generally been taken into consideration. The audience to which this book is directed is wide-ranging: chemists, engineers, marketing professionals and students. We show where the first fully synthetic polymers, phenolic resins, stand today and what their future is. Taking a look back over their development, one is only more deeply convinced that after a wide variety of adaptations, they still possess the technical and economic strengths which allow for their further market growth and with it, a full appreciation of their value. We would like to extend our gratitude to all friends and promoters, in particular to those who helped and encouraged us with advice and assistance. Andre Knop

More than 120 authors from science and industry have documented this essential resource for students, practitioners, and professionals. Comprehensively covering the development of the internal combustion engine (ICE), the information presented captures expert knowledge and serves as an essential resource that illustrates the latest level of knowledge about engine development. Particular attention is paid toward the most up-to-date theory and practice addressing thermodynamic principles, engine components, fuels, and emissions. Details and data cover classification and characteristics of reciprocating engines, along with fundamentals about diesel and spark ignition internal combustion engines, including insightful perspectives about the history, components, and complexities of the present-day and future IC engines. Chapter highlights include:

- Classification of reciprocating engines
- Friction and Lubrication
- Power, efficiency, fuel consumption
- Sensors, actuators, and electronics
- Cooling and emissions
- Hybrid drive systems

Nearly 1,800 illustrations and more than 1,300 bibliographic references provide added value to this extensive study. "Although a large number of technical books deal with certain aspects of the internal combustion engine, there has been no publication until now that covers all of the major aspects of diesel and SI engines." Two Turtle Doves is the story of a life spent making things. Growing up in 1970s Suffolk in a crumbling giant of a house with wild, tangled gardens, Alex Monroe was left to wreak havoc by invention. Without visible parental influence, but with sisters to love him and brothers to fight for him, he made nature into his world. Creation became a compulsion, whether it was go-carts and guns, cross-bows and booby-traps, boats, bikes or scooters. And then, it was jewellery. From full-out warfare waged against the local schoolboys to the freedom found in daredevil Raleigh bike antics to the delicacies of dress-making and the most intricate designs for jewellery, Two Turtle Doves

traces the intimate journey of how an idea is transformed from a fleeting thought into an exquisite piece of jewellery. It is about where we find our creativity, how we remember and why we make the things we do.

Ted Simon is the author of the classic travel book *JUPITER'S TRAVELS*. It documents his four-year journey round the world by motorbike, travelling through Europe, Africa, South and North America, and Asia. A number one bestseller in the late 1970s, it is still regarded as one of the greatest motorcycle books - indeed, one of the greatest travel books - ever written. In 2001, at the age of 69, Ted Simon decided to retrace his journey, and *DREAMING OF JUPITER* is the result. It took him two and a half years - during which time he revisited all the countries he had travelled through in the 1970s. He found much had changed, and he reflects upon the

increased poverty, political upheavals, environmental issues and indeed the changes in himself. But ultimately, **DREAMING OF JUPITER** is a hugely inspiring read with a positive message at its heart - that even at the age of 70 you can still set off on an adventure, and be surprised and excited by what life throws at you along the way.

In recent years primary education has been the subject of continuing debate with questions of standards and their apparent decline being raised with alarming regularity. Central in informing these

debates has been the ORACLE study of groupwork in primary classrooms. Published during the 1980s, the study described in detail the daily life of the primary classroom, the teaching styles used by teachers and the responses of pupils. That research has now been replicated - with over two thirds of the schools originally studied being revisited, using the same tests and observation instruments. This book presents the findings of this second round of research, and is therefore unique in being able authoritatively to document the changes - or lack of them - in primary education and teaching practice over the last twenty years.
