What happens to gender at 120mph? Are Harley-Davidsons more masculine than Yamahas? The Gendered Motorcycle answers such questions through a critical examination of motorcycles in film, advertising and television. Whilst bikers and biker cultures have been explored previously, the motorcycle itself has remained largely under-theorised, especially in relation to gender. Esperanza Miyake reveals how representations of motorcycles can produce different gendered bodies, identities, spaces and practices. This interdisciplinary book offers new and critical ways to think about gender and motorcycles, and will interest scholars and students of gender, technology and visual cultures, as well as motorcycle industry practitioners and motorcycle enthusiasts.

The Sidecar W. H. Freeman

When a bad day at work culminates in losing out on a promotion, Jim Sanders shifts into his animal form to let off steam. Then his bad day turns into a bad night-while prowling his Atlantic City neighborhood as a large gray house cat, he's caught in a torrential downpour. What little luck he has washes down the gutter when his new boss, Andrew Wright, catches him taking shelter on his porch, brings him inside, and starts calling him Mr. Frosty. As a feline, Jim becomes the inadvertent confessor for his boss's lonely son, Tony, a victim of schoolyard bullying. As a human, he feels drawn to Andrew, a man he wanted to resent. Finding love was never part of Jim's plan for the future-not with his bizarre secret-yet suddenly he finds himself navigating that minefield anyway. But not everything is easy, especially for an interracial gay couple dealing with prejudice in the workplace, at Tony's school, and even within their own families.

"Physics" 2nd edition is an alternate version of the "College Physics" 3rd edition text by Giambattista/Richardson/Richardson. The key difference is that "Physics" covers kinematics and forces in the more traditional organization of beginning with Kinematics and proceeding to forces. ("College Physics" takes an integrated approach to forces and kinematics, introducing forces and interweaving kinematics.)

Riding motorcycles is fun, but author Ken Condon maintains that there is a state of consciousness to be achieved beyond the simple pleasure of riding down the road. Riding in the Zone helps riders find that state of being. It's the experience of being physically and mentally present in the moment, where every sense is sharply attuned to the ride. Your mind becomes silent to the chatter of daily life, and everyday problems seem to dissolve. You feel a deeper appreciation for life. Your body responds to this state of being with precise, fluid movements, you feel in balance, your muscles are relaxed, and it seems as though every input you make is an expression of mastery. This is "the Zone." Condon identifies all of the factors that affect entering the Zone and addresses each one individually, from the development of awareness and mental skills to mastering physical control of the motorcycle. At the end of each chapter are drills designed to transform the book's ideas into solid, practical riding skills. Riding in the Zone takes riders to the next level in their skill set.

This book covers the essential elements of engineering mechanics of deformable bodies, including mechanical elements in tension-compression, torsion, and bending. It emphasizes a fundamental bottom up approach to the subject in a concise and uncluttered presentation. Of special interest are chapters dealing with potential energy as well as principle of virtual work methods for both exact and approximate solutions. The book places an emphasis on the underlying assumptions of the theories in order to encourage the reader to think more deeply about the subject matter. The book should be of special interest to undergraduate students looking for a streamlined presentation as well as those returning to the subject for a second time.
