Molecular Pathogenesis and Treatment of Chronic Myelogenous Leukemia provides a comprehensive understanding of the recent molecular genetics of Chronic Myelogenous Leukemia (CML) and a characterization of the molecular targets for drug development. Included are therapeutic implications, diagnosis, and prognosis for understanding and facilitating daily practice in the management of patients with CML. Understanding of the pathogenesis and therapy of hematological malignancies such as CML has grown significantly in recent years. This development owe much to the progress in molecular biology and now makes a major contribution to diagnosis and to treatment that pharmacologically targets the molecular events of CML. Molecular targeting therapy with newly developed agents such as small molecules and antibodies for hematological malignancies are being discovered after years of research. Some of these, including tyrosine kinase inhibitors such as imatinib, nilotinib, and dasatinib, lead to increased survival rates and improved therapies. With the opinion leaders of basic and clinical research in the field as authors, this book reviews recent advances in the biology of CML.

During the muscle car wars of the 1960s, Holley carburetors emerged as the carbs to have because of their easy-to-tune design, abundance of parts, and wide range of sizes. The legendary Double Pumper, the universal 600-cfm 1850 models, the Dominator, and now the Avenger have stood the test of time and are the leading carburetors in the high-performance engine market. To many enthusiasts, the operation, components, and rebuilding procedures remain a mystery. Yet, many carburetors need to be rebuilt and properly set up for a particular engine package. Veteran engine building expert and automotive author Mike Mavrigian guides you through each important stage of the rebuilding process, so you have the best operating carburetor for a particular engine and application. In addition, he explains carb identification as well as idle, mid-range and high-speed circuit operation, specialty tools, and available parts. You often need to replace gaskets, worn parts, and jets for the prevailing weather/altitude conditions or a different engine setup. Mavrigian details how to select parts then disassemble, assemble, and calibrate all of the major Holley carburetors. In an easy-to-follow step-by-step format, he shows you each critical stage for cleaning sensitive components and installing parts, including idle screws, idle air jets, primary/secondary main jets, accelerator pumps, emulsion tubes, and float bowls. He also includes the techniques for getting all of the details right so you have a smooth-running engine. Holley carburetor owners need a rebuilding guide for understanding, disassembling, selecting parts, and reassembling their carbs, so the carb then delivers exceptional acceleration, quick response, and superior fuel economy. Planning algorithms are impacting technical disciplines and industries around the world, including robotics, computer-aided design, manufacturing, computer graphics, aerospace applications, drug design, and protein folding. This coherent and comprehensive book unifies material from several sources, including robotics, control theory, artificial intelligence, and algorithms. The treatment is centered on robot motion planning, but integrates material on planning in discrete spaces. A major part of the book is devoted to planning under uncertainty, including decision theory, Markov decision processes, and information spaces, which are the 'configuration spaces' of all sensor-based planning problems. The last part of the book delves into planning under differential constraints that arise when automating the motions of virtually any mechanical system. This text and reference is intended for students, engineers, and researchers in robotics, artificial intelligence, and control theory as well as computer graphics, algorithms, and computational biology.
