The design, development, analysis, and evaluation of new aircraft technologies such as fly by wire, unmanned aerial vehicles, and micro air vehicles, necessitate a better understanding of flight mechanics on the part of the aircraft-systems analyst. A text that provides unified coverage of aircraft flight mechanics and systems concept will go a long way. **The Point, Issue 7** Scholastic Inc.

In this volume, a distinguished set of international scholars examine the nature of collaboration between life partners in the sciences, with particular attention to the ways in which personal and professional dynamics can foster or inhibit scientific practice. Breaking from traditional gender analyses which focus on divisions of labor and the assignment of credit, the studies scrutinize collaboration as a variable process between partners living in the nineteenth and twentieth centuries who were married and divorced, heterosexual and homosexual, aristocratic and working-class and politically right and left. The contributors analyze cases shaped by their particular geographical locations, ranging from retreat settings like the English countryside and Woods Hole, Massachusetts, to university laboratories and urban centers in Berlin, Stockholm, Geneva and London. The volume demonstrates how the terms and meanings of collaboration, variably shaped by disciplinary imperatives, cultural mores, and the agency of the collaborators themselves, illuminate critical intellectual and institutional developments in the modern sciences.

Fourteen question-answering systems which are more or less completely programmed and operating are described and reviewed. The systems range from a conversation machine to programs which make sentences about pictures and systems which translate from English into logical calculi. Systems are classified as data based, text based, and inferential. Principles and methods of operations are detailed and discussed. It is concluded that the data base question answerer has passed from initial research into the developmental phase.

The most difficult and important research questions for the advancement of general purpose language processors are seen to be concerned with measuring meaning, dealing with ambiguities, translating into formal languages and searching large tree structures. (Author).

Welcome to the new gold standard in critical care transport training. Published in conjunction with the American Academy of Orthopaedic Surgeons (AAOS) and the American College of Emergency Physicians (ACEP), Critical Care Transport offers cutting edge content relevant to any healthcare provider training in critical care transport. Like no other textbook in this market, Critical Care Transport thoroughly prepares medical professionals to function as competent members of a critical care team by covering the material that everyone—paramedics, nurses, physicians, and specialty crew—needs to know to operate effectively in the prehospital critical care environment. This book meets the curricula of major critical care training programs, including University of Maryland, Baltimore County (UMBC). It covers both ground and flight transport, and meets the objectives of critical care transport certification exams such as the Certified Flight

Paramedic (FP-C) exam administered by the Board for Critical Care Transport Paramedic Certification. Content includes information specific to prehospital critical care transport, such as flight physiology, lab analysis, hemodynamic monitoring, and specialized devices such as the intra-aortic balloon pump. Standard topics such as airway management, trauma, and pharmacology are covered in the context of critical care. Chapters have been authored by leading critical care professionals across the country and represent the most current, state-of-the-art information on management of critical care patients.

The Point is a twice-yearly journal of essays on contemporary life and culture, based in Chicago. A mix of criticism, memoir, and reviews, The Point goes beyond intellectual tourism by challenging its readers to recognize the impact of ideas on their everyday life. Early issues have considered whether it is possible to live an honorable social life on Facebook, what Thorstein Veblen would say about Goldman Sachs, how Stendhal might help us with dating, and why today ' s conservatives ought to read Marx. Each issue also contains a symposium consisting of several shorter pieces relating to a topic chosen by the editors—for instance, film, conservatism, or contemporary music. Issue 7 of The Point will include a critical consideration of Christopher Lasch and the role of the social critic today; a consideration of the state of photojournalism in the age of Photoshop; a memoir about the ethics of writing about the dead; a critique on the narcissism of David Shields and his admirers; and the conclusion to Jonny Thakkar's "Socialism we can Believe in," which jumps off from the death of Margaret Thatcher. The symposium asks the question: What is Marriage for? In addition to contributions on both sides of the gay marriage issue (including the moral case made from within the LGBT community against gay marriage), responses deal with marriage as a microcosm of utopian politics, marriage as a way of dealing with aging and death, and marriage as an escape from purely economic models of action and calculation. Reviews of the Coca Cola museum, the HBO series Enlightened, and the phenomenon of political outrage on the Left round out the final section. The Letter from the Editors will be on Security.
