Reference Manual for the Installer and Service Man

The Honeywell H6000 Utility Software System consists of a composite of many different types of basic (non-functional) software required in support of H6000 functional automated data systems. This software includes utility and general purpose programs/subroutines which perform specific functions common to many users. Code conversion, data compaction, and tape file input/output are a few of the functions performed by the system. This manual provides a computer information for utilization of the systems, programs, and subroutines of H6000 standard Air Force utility software. This manual is the central point of documentation for all standard Air Force H6000 utility software.
