"Summary: To determine what happened on 9/11, all available evidence must be considered. We cannot pick and choose which observable facts we may want to explain and then ignore the others. Any explanation must consider all the available evidence... None of the facts, events, anomalies, or phenomena that have been listed, discussed, and analyzed in this book can be explained by airliner crashes, jet fuel fires, or any scheme of controlled demolition. A comparison of the 911 evidence collected with the evidence of results produced by the well-established Hutchison Effect shows that a similar technology was employed in the destruction of the towers..."--P. 483-484.

The Law Library presents the complete text of the Custom and Border Protection's Bond Program (US Department of the Treasury Regulation) (TREAS) (2018 Edition). Updated as of May 29, 2018

This document adopts as a final rule, with changes, proposed amendments to the U.S. Customs and Border Protection (CBP) regulations that serve to centralize the processing of continuous bonds at CBP's Revenue Division within the Office of Administration. Upon consideration of comments received from the public in response to the proposed rulemaking, and in light of CBP's ongoing efforts concerning the development of electronic bonds, CBP has determined not to proceed at this time with certain proposed regulatory changes relating to the application, approval, and execution of bonds. CBP has also determined not to proceed with proposals relating to provisions that are the subject of other rulemakings currently under inter-departmental review. In the notice of proposed rulemaking, CBP used the terms "CBP-approved electronic data interchange system" and "electronic filing" to describe the manner by which continuous bonds may be submitted to CBP. In this final rule, these terms are clarified to reflect that continuous bonds may be scanned and submitted to CBP as an email attachment, or by facsimile. This document also amends the CBP regulations to allow for the filing of single transaction bonds pursuant to these methods. In this rulemaking, CBP also clarifies the CBP regulations to reflect that intellectual property rights sample bonds are posted to protect the importer or owner of the sample, and changes provisions of the international carrier bond regarding the payment of fees. Lastly, this final rule adopts non-substantive amendments to the regulations regarding nomenclature and organizational changes, including editorial changes to enhance general readability, and makes technical corrections to reflect statutory amendments. This ebook contains: - The complete text of the Custom and Border Protection's Bond Program (US Department of the Treasury Regulation) (TREAS) (2018 Edition) - A dynamic table of content linking to each section - A table of contents in introduction presenting a general overview of the structure

Automation in air traffic control may increase efficiency, but it also raises questions about adequate human control over automated systems. Following on the panel's first volume on air traffic control automation, *Flight to the Future* (NRC, 1997), this book focuses on the interaction of pilots and air traffic controllers, with a growing network of automated functions in the airspace system. The panel offers recommendations for development of human-centered automation, addressing key areas such as providing levels of automation that are appropriate to levels of risk, examining procedures for recovery from emergencies, free flight versus ground-based authority, and more. The book explores ways in which technology can build on human strengths and compensate for human vulnerabilities, minimizing both mistrust of automation and complacency about its abilities. The panel presents an overview of emerging technologies and trends toward automation within the national airspace system--in areas such as global positioning and other aspects of surveillance, flight information provided to pilots and controllers, collision avoidance, strategic long-term planning, and systems for training and maintenance. The book examines how to achieve better integration of research and development, including the importance of user involvement in air traffic control. It also discusses how to harmonize the wide range of functions in the national airspace system, with a detailed review of the free flight initiative.
