"book provides an enlightening picture of the role of microbes for sustaining life systems and how climatic factors change the course of the processes. Climate Change and Microbes: Impacts and Vulnerability explores the little-addressed issue of the effects of climate change on microbial ecosystems and the influence of climate change on microbiome diversity across various habitats and regions. Recent years have seen the evidence that microbial communities are neither immune to disruption nor do they have the capacity to recover completely after a stressful climate event. This volume documents the important role of microorganisms as climate engineers and considers mitigation and adaptation strategies as well. It goes on to present the research that addresses a diverse array of topics on the impact of climate change on plant-microbe interactions and microbial aquatic life, change-induced aggravations in microbial populations and processes. The book also addresses microbial foodborne diseases resulting from challenging climates. Other topics include algae as indicators of climate change and strategies for facilitating sustainable agro-ecosystems. This book will be immensely helpful in the study of plant microbiology, agricultural sciences, biotechnology, climate science, and environmental microbiology. It will also be applicable to the field of microbial biotechnology, agricultural, and other life and environmental sciences"--

Change Through Time in Psychoanalysis presents a new stage of the work done through the IPA Committee on Clinical Observation between 2014 and 2020—the advances in our method, the Three Level Model (3-LM), and our clinical thinking. In this new volume, ideas on observational research, clinical narratives based on 3-LM group discussions, and adaptations of the model for training candidates show more experience, more depth, more answers, and, of course, new questions. Contributors from three regions of the IPA have written extended case studies of 10 psychoanalyses, rich in verbatim session material, focusing on the main dimensions of the patient's psychic functioning, specific changes in the analytic process, and related interventional strategies. The reader will find, in the method and in the clinical narratives, new and clarifying points of view in the observation of transformations in patients in psychoanalysis and of the analysts' techniques, useful both in professional development and in teaching candidates.

This upper level textbook provides a coherent introduction to the economic implications of individual and population ageing. Placing economic considerations into a wider social sciences context, this

is ideal reading not only for advanced undergraduate and masters students in health economics and economics of ageing, but policy makers, professionals and practitioners in gerontology, sociology, health-related sciences, and social care. This volume introduces topics in labour economics, including the economic implications of ageing workforces. It covers pension economics and pension systems with their macroeconomic and distributive effects, and the question of risk. Finally, it describes macroeconomic consequences of ageing populations on aggregate saving, inflation, international trade, and financial markets.

This book offers practical insight into the changing ways in which organizations operate today. Building on a groundbreaking concept of teal organizations, the book illustrates the practicality of advocating a lack of hierarchy of predetermined positions and the introduction of roles that come with clear responsibilities constantly defined according to current needs. First described by Frederic Laloux, a teal organization is a ground-breaking approach to managing organizations that is being adopted around the world, which turns everyone into a leader. This new paradigm rests on the ideas of wholeness, evolutionary purpose, employee autonomy, and self-management based on peer relationships. Its main assumption is the empowerment of the employee resulting in a change in workplace relationships and a more soulful and purposeful work environment. Drawing on the authors' research across six different countries, it presents the evolution of self-management and entrepreneurial culture in the current age of Economy 4.0 and examines how the teal concept has been implemented around the world. It examines misconceptions surrounding this novel approach and diagnoses the practical problems connected with implementing it in the current uncertain times. It will be of value to

researchers, academics, managers, and students in the fields of management and organizational studies.

Climate Change and Microbes Springer Nature This book is dedicated to Aristid Lindenmayer on the occasion of his 60th birthday on November 17, 1985. Contributions range from mathematics and theoretical computer science to biology. Aristid Lindenmayer introduced language-theoretic models for developmental biology in 1968. Since then the models have been customarily referred to as L systems. Lindenmayer's invention turned out to be one of the most beautiful examples of interdisciplinary science: work in one area (developmental biology) induces most fruitful ideas in other areas (theory of formal languages and automata, and formal power series). As evident from the articles and references in this book, the interest in L systems is continuously growing. For newcomers the first contact with L systems usually happens via the most basic class of L systems, namely, DOL systems. Here "0" stands for zero context between developing cells. It has been a major typographical problem that printers are unable to distinguish between 0 (zero) and 0 (oh). Thus, DOL was almost always printed with "oh" rather than "zero", and also pronounced that way. However, this misunderstanding turned out to be very fortunate. The wrong spelling "DOL" of "DOL" could be read in the suggestive way: DO L Indeed, hundreds of researchers have followed this suggestion. Some of them appear as contributors to this book. Of the many who could not contribute, we in particular regret the absence of A. Ehrenfeucht, G. Herman and H.A. Maurer whose influence in the theory of L systems has been most significant.
