House cleaning has been an innate human activity forever

but only since the early 19th century have mechanical devices replaced the physical labor (performed mostly by women). Mechanical carpet sweepers were replaced by manual suction cleaners, which in turn were replaced by electric vacuum cleaners in the early 20th century. Innovative inventors, who improved vacuum cleaners as electricity became commonly available, made these advances possible. Many early manufacturers failed, but some, such as Bissell, Hoover, Eureka and others, became household names as they competed for global dominance with improved features, performance and appearance. This book describes the fascinating people who made this possible, as well as the economic, cultural and technological contexts of their times. From obscure beginnings 200 years ago, vacuum cleaners have become an integral part of modern household culture.

lively, authoritative, and pathbreaking study considers the history of material advances and domestic service, the "women's separate sphere," and the respective influences of advertising, home economics, and women's entry into the workforce. *Never Done* begins by describing the household chores of nineteenth-century America: cooking at fireplaces and on cast-iron stoves, laundry done with boilers and flatirons, endless water-hauling and fire-tending, and so on. Strasser goes on to explain and explore how industrialization transformed the nature of women's work. Easing some tasks and eliminating others, new commercial processes inexorably altered
