Accessible and instructive, *Palliative Care* guides and inspires health social workers to incorporate palliative care principles into their current clinical practice. Through the lenses of environmental theory and intersectionality, rich case narratives highlight opportunities for social workers to enhance their work, advancing whole-person care in the face of serious illness. Chapters include questions to concretize ideas and demonstrate

real-world application, while case narratives cover a range of settings, diagnoses, and populations. This book is a useful tool for educators, learners, and practicing social workers working with individuals and families navigating complex health care systems. *Handbook of Hospice Policies and Procedures* Springer Nature

The importance of palliative care for children facing life threatening illness and their families is now widely acknowledged as an essential part of care, which should be available to all children and families, throughout the child's illness and at the end of life. The new edition of the *Oxford Textbook of Palliative Care for Children* brings together the most up to date information, current knowledge, evidence, and developments of clinical practice in the field. The book is structured into four sections. 'Foundations of Care' describes core issues, the foundations on which paediatric palliative care is based. 'Child and Family Care' looks at different aspects of psychological, social, and cultural care for the sick child

or young person, and their family. These chapters cover the time course of the illness, around the time of death and support for the bereaved family. 'Symptom Care' focuses on the uses of medication, specific symptoms, and their management. Finally, 'Delivery of Care' examines practical approaches to care in different environments and the needs of clinicians. Two new editors join the team from Canada and South Africa, reflecting our aims to contribute towards the development of care for children across the world, and to be a resource for both experienced clinicians and those new to the field. Comprehensive in scope, exhaustive in detail, and definitive in authority, this third edition has been thoroughly updated to cover new practices, current epidemiological data, and the evolving models that support the delivery of palliative medicine to children. This includes two new chapters, looking in detail at 'Decision Making' and 'Perinatal Care', and a new section highlighting the emerging importance of 'Palliative Care for Children in Humanitarian Crises'. This book is an essential resource for anyone who works with children worldwide.

When the end of life makes its inevitable appearance, people should be able to expect reliable, humane, and effective caregiving. Yet too many dying people suffer unnecessarily. While an "overtreated" dying is feared, untreated pain or emotional abandonment are equally frightening. *Approaching Death* reflects a wide-ranging effort to understand what we know about care at the end of life, what we have yet to learn, and what we know but do not adequately apply. It seeks to build

understanding of what constitutes good care for the dying and offers recommendations to decisionmakers that address specific barriers to achieving good care. This volume offers a profile of when, where, and how Americans die. It examines the dimensions of caring at the end of life: Determining diagnosis and prognosis and communicating these to patient and family. Establishing clinical and personal goals. Matching physical, psychological, spiritual, and practical care strategies to the patient's values and circumstances. *Approaching Death* considers the dying experience in hospitals, nursing homes, and other settings and the role of interdisciplinary teams and managed care. It offers perspectives on quality measurement and improvement, the role of practice guidelines, cost concerns, and legal issues such as assisted suicide. The book proposes how health professionals can become better prepared to care well for those who are dying and to understand that these are not patients for whom "nothing can be done."

For patients and their loved ones, no care decisions are more profound than those made near the end of life. Unfortunately, the experience of dying in the United States is often characterized by fragmented care, inadequate treatment of distressing symptoms,

frequent transitions among care settings, and enormous care responsibilities for families. According to this report, the current health care system of rendering more intensive services than are necessary and desired by patients, and the lack of coordination among programs increases risks to patients and creates avoidable burdens on them and their families. *Dying in America* is a study of the current state of health care for persons of all ages who are nearing the end of life. Death is not a strictly medical event. Ideally, health care for those nearing the end of life harmonizes with social, psychological, and spiritual support. All people with advanced illnesses who may be approaching the end of life are entitled to access to high-quality, compassionate, evidence-based care, consistent with their wishes. *Dying in America* evaluates strategies to integrate care into a person- and family-centered, team-based framework, and makes recommendations to create a system that coordinates care and supports and respects the choices of patients and their families. The findings and recommendations of this report will address the needs of patients and their families and assist policy makers, clinicians and their educational and credentialing bodies, leaders of health care delivery and financing organizations, researchers, public and private funders,

religious and community leaders, advocates of better care, journalists, and the public to provide the best care possible for people nearing the end of life.

Volunteers have a long been involved in supporting the delivery of palliative care. Indeed in some countries, the range and quality of hospice and palliative care services depends on the involvement of volunteers. Hospice and palliative care services and volunteering are changing. As society develops, so too does volunteering. Volunteers have growing expectations of organizations, and increasingly seek roles that meet their needs and aspirations, rather than fitting in with organizational approaches. As hospice and palliative care services experience increasing and changing demands for their services due to aging populations with complex healthcare needs, we need to recognize that volunteers have a vital role to play in supporting the delivery of services of the future. The *Changing Face of Volunteering in Hospice and Palliative Care* explores the complex phenomenon that is volunteering in hospice and palliative care in different countries. It considers how and why volunteering is changing, through the contributions of authors from Western and Eastern Europe, North America, Australia, Africa, and India. It reflects on the influence of culture and organisational contexts, in addition to management approaches, legislative, and political influences, highlighting factors that contribute to the success of

volunteering. Contributing to knowledge and understanding in the field of volunteering in hospice and palliative care internationally, this book highlights the factors that contribute to the success of volunteering models, allowing readers to see possibilities for change and find new ideas for innovative practice in their own setting.
