A leading economist and researcher report from the front lines of a revolution in solving the world's most persistent problem. When it comes to global poverty, people are passionate and polarized. At one extreme: We just need to invest more resources. At the other: We've thrown billions down a sinkhole over the last fifty years and accomplished almost nothing. Dean Karlan and Jacob Appel present an entirely new approach that blazes an optimistic and realistic trail between these two extremes. In this pioneering book Karlan and Appel combine behavioral economics with worldwide field research. They take readers with them into villages across Africa, India, South America, and the Philippines, where economic theory collides with real life. They show how small changes in banking, insurance, health care, and other development initiatives that take into account human irrationality can drastically improve the well-being of poor people everywhere. We in the developed world have found ways to make our own lives profoundly better. We use new tools to spend smarter, save more, eat better, and lead lives more like the ones we imagine. These tools can do the same for the impoverished. Karlan and Appel's research, and those of some close colleagues, show exactly how. In America alone, individual donors contribute over two hundred billion to charity annually, three times as much as corporations, foundations, and bequests combined. This book provides a new way to understand what really works to reduce poverty; in so doing, it reveals how to better invest those billions and begin transforming the well-being of the world.

Pacific Fishing

The Out to Sea Joke Book
Rancher, Farmer, Fisherman: Conservation Heroes of the American Heartland

Declared “the best survival book in a decade” by Outside Magazine, *438 Days* is the true story of the man who survived fourteen months in a small boat drifting seven thousand miles across the Pacific Ocean. On November 17, 2012, two men left the coast of Mexico for a weekend fishing trip in the open Pacific. That night, a violent storm ambushed them as they were fishing eighty miles offshore. As gale force winds and ten-foot waves pummeled their small, open boat from all sides and nearly capsized them, captain Salvador Alvarenga and his crewmate cut away a two-mile-long fishing line and began a desperate dash through crashing waves as they sought the safety of port. Fourteen months later, on January 30, 2014, Alvarenga, now a hairy, wild-bearded and half-mad castaway, washed ashore on a nearly deserted island on the far side of the Pacific. He could barely speak and was unable to walk. He claimed to have drifted from Mexico, a journey of some seven thousand miles. A “gripping saga,” (Daily Mail), *438 Days* is the first-ever account of one of the most amazing survival stories in modern times. Based on dozens of hours of exclusive interviews with Alvarenga, his colleagues, search-and-rescue officials, the remote islanders who found him, and the medical team that saved his life, *438 Days* is not only “an intense, immensely absorbing read” (Booklist) but an unforgettable study of the resilience, will, ingenuity and determination required for one man to survive more than a year lost and adrift at sea.

The Out to Sea Joke Book

A gripping, twisting account of a small town set on fire by hatred, xenophobia, and ecological disaster—a story that weaves together corporate malfeasance, a battle over shrinking natural resources, a turning point in the modern white supremacist movement, and one woman’s relentless battle for environmental justice. “Riveting...it has a little of everything that a thrilling story needs. It feels quite prescient, as if something we’re living out now, you can see scenes of it then. A gripping book that deserves a wide readership.”--George Packer, author of *The Unwinding* By the late 1970s, the fishermen of the Texas Gulf Coast were struggling. The bays that had sustained generations of shrimpers and crabbers before them were being poisoned by nearby petrochemical plants, oil spills, pesticides, and concrete. But as their nets came up light, the white shrimpers could only see one culprit: the small but growing number of newly resettled Vietnamese refugees who had recently started fishing. Turf was claimed. Guns were flashed. Threats were made. After a white crabber was killed by a young Vietnamese refugee in self-defense, the situation became a tinderbox primed to explode, and the Grand Dragon of the Texas Knights of the Ku Klux Klan saw an opportunity to stoke the fishermen’s rage and prejudices. At a massive Klan rally near Galveston Bay one night in 1981, he strode over to an old boat graffitied with the words U.S.S. VIET CONG, torch in hand, and issued a ninety-day deadline for the refugees to leave or else “it’s going to be a helluva lot more violent than Vietnam!” The white fishermen roared as the boat burned, convinced that if they could drive these newcomers from the coast, everything would return to normal. A shocking campaign of violence ensued, marked by burning crosses, conspiracy theories, death threats, torched boats, and heavily armed Klansmen patrolling Galveston Bay. The Vietnamese were on the brink of fleeing, until a charismatic leader in their community, a highly decorated colonel, convinced them to stand their ground by entrusting their fate with the Constitution. Drawing upon a trove of never-before-published material, including FBI and ATF records, unprecedented access to case files, and scores of firsthand interviews with Klansmen, shrimpers, law enforcement, environmental activists, lawyers, perpetrators and victims, Johnson uncovers secrets and secures confessions to crimes that went unsolved for more than forty years. This explosive investigation of a forgotten story, years in the making, ultimately leads Johnson to the doorstep of the one

woman who could see clearly enough to recognize the true threat to the bays—and who now represents the fishermen’s last hope.

There is still so much about the oceans that scientists do not know, and exploring the continental shelves of the world is a huge part of finding out more about these underwater environments. Further to that, it is extremely important that, while scientists and engineers explore and monitor the continental shelf, no damage is done to these precious environments. That is the needle that this study intends to thread, giving scientists and engineers a better method and processes for exploring these underwater mysteries, while protecting the environment and wildlife thriving beneath. Written by a proven scientist in this area, this book is dedicated to the unique developments of hydroacoustical equipment to monitor the coastal shelf. The results of the original experimental sonar studies with application of the parametric antenna are presented. The book presents a survey of the modern methods and technical monitoring facilities of the coastal aqueous environment. The basic characteristics of the parametric antennas are given considering propagation of the acoustic waves in the environments with dispersion and acoustical absorption. The author and his colleagues consider the questions of formation of the parametric antenna field in layered-heterogeneous media and the peculiarities of sounding of the interfaces and bottom sediments. Ecological monitoring methods of the basic parameters of quality and condition of the aqueous environment are analyzed. The peculiarities of diagnostics of the underwater engineering constructions when monitoring the offshore strips are described. For both veteran engineers and students in the field alike, this breakthrough study is a must-have for any scientific library concerned with studying the oceans and especially the continental shelf.

Now a feature-length documentary on the Discovery channel narrated by Tom Brokaw. “Lush, gorgeously written...A profoundly hopeful book.” —Tina Rosenberg, winner of the Pulitzer Prize and the National Book Award A Kirkus Best Book of 2016 Many of the men and women doing today’s most consequential environmental work—restoring America’s grasslands, wildlife, soil, rivers, wetlands, and oceans—would not call themselves environmentalists; they would be too uneasy with the connotations of that word. What drives them is their deep love of the land: the iconic terrain where explorers and cowboys, pioneers and riverboat captains forged the American identity. They feel a moral responsibility to preserve this heritage and natural wealth, to ensure that their families and communities will continue to thrive. Unfolding as a journey down the Mississippi River, *Rancher, Farmer, Fisherman* tells the stories of five representatives of this stewardship movement: a Montana rancher, a Kansas farmer, a Mississippi riverman, a Louisiana shrimper, and a Gulf fisherman. In exploring their work and family histories and the essential geographies they protect, *Rancher, Farmer, Fisherman* challenges pervasive and powerful myths about American and environmental values.
