Recycle Paper - **RecyclingWorks**
Paper recycling saves energy, reduces greenhouse gas emissions. Paper recycling has been around for a long time. Actually, when you think about it,

paper has been a recycled product from the very beginning. For the first 1,800 years or so that paper existed, it was always made from discarded materials. *Everything You Need to Know About Paper Recycling ...*
The recycling of paper is the process by which waste paper is turned into new paper products. It has a number of important benefits: It saves waste paper from

occupying homes of people and producing methane as it breaks down. Because paper fibre contains carbon, recycling keeps the carbon locked up for longer and out of the atmosphere. Around two thirds of all paper products in the US are now recovered and recycled, although it does not all become new paper. After repeated processing

the fibres
How paper is recycled « Recycling Guide
The paper is taken to a recycling plant where it is separated into types and grades. The separated paper is then washed with soapy water to remove inks, plastic film, staples and glue. The paper is put into a large holder where it is mixed with water to create 'slurry'.
Paper recycling - Wikipedia
Newspaper Recycling

Facts and Figures
Paper fiber from newspaper can be recycled up to four times. With each trip through the pulping process, the fibers gradually break down, so some amount of "virgin fiber" is always required in creating new paper.

How Do They Recycle Paper?

While
recycling is
definitely a
good thing to
do, it does
not
necessarily
reduce the
demand for
virgin
plastic.
Products made
with virgin
plastic
usually
cannot be
made from
recycled
materials.
Recycling
plastic does

reduce the
demand for
other
resources,
however. For
example, by
making
engineered
lumber with
plastic, it
is possible
to save
trees.
