Is using the word crazy offensive? What happens when such a label gets attached to your everyday experiences? In order to understand mental health, we need to talk openly about it. Because there ' s no single definition of crazy, there ' s no single experience that embodies it, and the word itself means different things—wild? extreme? disturbed? passionate?—to different people. (Don ' t) Call Me Crazy is a conversation starter and guide to better understanding how our mental health affects us every day. Thirty-three writers, athletes, and artists offer essays, lists, comics, and illustrations that explore their personal experiences with mental illness, how we do and do not talk about mental health, help for better understanding how every person ' s brain is wired differently, and what, exactly, might make someone crazy. How Much Would Individual Insurance Premiums Cost Under Kassebaum-Kennedy? Penguin

In fiscal year 2008, the Department of Education oversaw the distribution of approximately \$96 billion in federal student financial aid, including \$14.6 billion in Pell Grants to low- and middle-income students, to help students and their families pay for higher-education expenses. Much of this aid was distributed based on a formula specified in the Higher Education Act, as amended, that is used to identify students

who need financial assistance to pay for higher education. To apply for federal financial aid, such as Pell Grants, students submit a Free Application for Federal Student Aid on which they report their own or both their own and their families' income and assets. Students who are financially dependent on their parents or other family members are required to report their own and their family's income and assets, while those who are financially independent report only their own income and assets (and their spouse's, if they are married). To determine if a student has financial need, the aid formula compares how much it costs a student to attend a particular college and an estimate of how much the student or student and family can afford to pay toward the

cost--called the expected family contribution (EFC). How much a family can afford to contribute to college costs depends on a variety of factors, including the cost of living where a family resides. Some observers have questioned whether the federal aid formula appropriately accounts for geographic cost-of-living differences. As required by the Higher Education Opportunity Act, we are providing information on options for adjusting the federal student aid formula for geographic cost-of-living differences. Specifically, this report addresses the following questions: (1) How does the current federal financial aid formula affect students in different geographic areas? (2) What options exist for modifying this formula to reflect geographic cost-of-living differences? (3) How would adding a cost-of-living adjustment (COLA) to the formula affect the federal financial aid system, including the distribution of Pell Grants? The study found that the federal aid formula accounts for a small degree of geographic cost-of-living differences, but it is unclear how geographic cost-of-living differences not accounted for in the formula affect a family's ability to pay for college. While no official measure of overall geographic cost-of-living differences exists, we have identified 3 possible COLA options that could be used in the aid formula. These COLAs have varying geographic scopes, impacts, strengths, and limitations. The COLAs we identified could increase Pell Grants and other aid to a small percentage of

students from high-cost areas, but could also further complicate the calculation and administration of aid. Appended are: (1) Briefing Slides; (2) Scope and Methodology; (3) Counties Where Students Could See a Change in Financial Aid under Different COLA Options; (4) Summary of Effects of Adding a COLA to the Federal Needs Analysis Formula on Expected Family Contribution Levels and Pell Grant Awards; (5) Change in Pell Grant for Example Students in High-Cost and Low-Cost Areas for Each COLA; and (6) GAO Contact and Staff Acknowledgments.

In fact, you don't even need to like accounting.

However, most aspiring business leaders, managers, and owners must have a basic foundation in accounting principles to make decisions. Instead of teaching accounting concepts with numbers, math, or debits and credits, "How Much Does It Cost To Make a Donut?" delivers

accounting knowledge in a series of entrepreneurial stories. Using a start-up, donut shop as a case study, this book incorporates general accounting concepts and reinforces them with a myriad of real-world examples. These exercises deal with the issues, personalities, and questions decision makers encounter every day, and connect them to the accounting concepts that make a difference. Follow a donut shop owner and her partner as they use basic accounting foundations to build a donut company. From concept through five years of operation, find out how an aspiring business owner learned how to make decisions using accounting without actually doing any accounting.

Must Success Cost So Much Stephen Weber
How the simulation and visualization technologies so pervasive in science, engineering, and design have changed our way of seeing the world. Over the past twenty years, the technologies of simulation and visualization

have changed our ways of looking at the world. In *Simulation and Its Discontents*, Sherry Turkle examines the now dominant medium of our working lives and finds that simulation has become its own sensibility. We hear it in Turkle's description of architecture students who no longer design with a pencil, of science and engineering students who admit that computer models seem more “real” than experiments in physical laboratories. Echoing architect Louis Kahn's famous question, “What does a brick want?”, Turkle asks, “What does simulation want?” Simulations want, even demand, immersion, and the benefits are clear. Architects create buildings unimaginable before virtual design; scientists determine the structure of molecules by manipulating them in virtual space; physicians practice anatomy on digitized humans. But immersed in simulation, we are

vulnerable. There are losses as well as gains. Older scientists describe a younger generation as “drunk with code.” Young scientists, engineers, and designers, full citizens of the virtual, scramble to capture their mentors' tacit knowledge of buildings and bodies. From both sides of a generational divide, there is anxiety that in simulation, something important is slipping away. Turkle's examination of simulation over the past twenty years is followed by four in-depth investigations of contemporary simulation culture: space exploration, oceanography, architecture, and biology.

heartbreaking and hilarious memoir by

iCarly and *Sam & Cat* star Jennette

McCurdy about her struggles as a former

child actor—including eating disorders,

addiction, and a complicated relationship

with her overbearing mother—and how she

retook control of her life. Jennette McCurdy

was six years old when she had her first

acting audition. Her mother's dream was for her only daughter to become a star, and Jennette would do anything to make her mother happy. So she went along with what Mom called "calorie restriction," eating little and weighing herself five times a day. She endured extensive at-home makeovers while Mom chided, "Your eyelashes are invisible, okay? You think Dakota Fanning doesn't tint hers?" She was even showered by Mom until age sixteen while sharing her diaries, email, and all her income. In *I'm Glad My Mom Died*, Jennette recounts all this in unflinching detail—just as she chronicles what happens when the dream finally comes true. Cast in a new Nickelodeon series called *iCarly*, she is thrust into fame. Though Mom is ecstatic,

emailing fan club moderators and getting on a first-name basis with the paparazzi (“Hi Gale!”), Jennette is riddled with anxiety, shame, and self-loathing, which manifest into eating disorders, addiction, and a series of unhealthy relationships. These issues only get worse when, soon after taking the lead in the iCarly spinoff *Sam & Cat* alongside Ariana Grande, her mother dies of cancer. Finally, after discovering therapy and quitting acting, Jennette embarks on recovery and decides for the first time in her life what she really wants. Told with refreshing candor and dark humor, *I’m Glad My Mom Died* is an inspiring story of resilience, independence, and the joy of shampooing your own hair.

Secrets of the Six-Figure Author Penguin

Over half of all births to young adults in the United States now occur outside of marriage, and many are unplanned. The result is increased poverty and inequality for children. The left argues for more social support for unmarried parents; the right argues for a return to traditional marriage. In *Generation Unbound*, Isabel V. Sawhill offers a third approach: change “drifters” into “planners.” In a well-written and accessible survey of the impact of family structure on child well-being, Sawhill contrasts “planners,” who are delaying parenthood until after they marry, with “drifters,” who are having unplanned children early and outside of marriage. These two distinct patterns are contributing to an emerging class divide and threatening social mobility in the United States. Sawhill draws on insights from the new field of behavioral economics,

showing that it is possible, by changing the default, to move from a culture that accepts a high number of unplanned pregnancies to a culture in which adults only have children when they are ready to be a parent.
