**BESTSELLER** A heartbreaking and hilarious memoir by iCarly and *Sam & Cat* star Jennette McCurdy about her struggles as a former child actor—including eating disorders, addiction, and a complicated relationship with her overbearing mother—and how she retook control of her life. Jennette McCurdy was six years old when she had her first acting audition. Her mother’s dream was for her

---

only daughter to become a star, and Jennette would do anything to make her mother happy. So she went along with what Mom called “calorie restriction,” eating little and weighing herself five times a day. She endured extensive at-home makeovers while Mom chided, “Your eyelashes are invisible, okay? You think Dakota Fanning doesn’t tint hers?” She was even showered by Mom until age sixteen while sharing her diaries, email, and all her income. In *I’m Glad My Mom Died*, Jennette recounts all this in unflinching detail—just as she chronicles what happens when the dream finally comes true. Cast in a new Nickelodeon series called *iCarly*, she is thrust into fame. Though Mom is ecstatic, emailing fan club moderators and getting on a first-name basis with the paparazzi (“Hi Gale!”), Jennette is riddled with anxiety, shame, and self-

loathing, which manifest into eating disorders, addiction, and a series of unhealthy relationships. These issues only get worse when, soon after taking the lead in the *iCarly* spinoff *Sam & Cat* alongside Ariana Grande, her mother dies of cancer. Finally, after discovering therapy and quitting acting, Jennette embarks on recovery and decides for the first time in her life what she really wants. Told with refreshing candor and dark humor, *I’m Glad My Mom Died* is an inspiring story of resilience, independence, and the joy of shampooing your own hair.

For much of the past century college tuition has risen more rapidly than the inflation rate. Unlike many analyses of higher education, Archibald and Feldman show how broad economic factors have combined to push up cost. These forces are largely out of

Economists know how to calculate optimal prices for electricity transmission. These are rarely applied in practice. This paper develops a thirteen node model of the transmission system in England and Wales, incorporating losses and transmission constraints. It is solved with optimal prices, and with uniform prices for demand and for generation, re-dispatching when needed to take account of

---

transmission constraints. Moving from uniform prices to optimal nodal prices could raise welfare by 1.5% of the generators<sup>2</sup> revenues, and would be less vulnerable to market power. It would also send better investment signals, but create politically sensitive regional gains and losses.

Brookings Institution Press  
In fiscal year 2008, the Department of Education oversaw the distribution of approximately \$96 billion in federal student financial aid, including \$14.6 billion in Pell Grants to low- and

middle-income students, to help students and their families pay for higher-education expenses. Much of this aid was distributed based on a formula specified in the Higher Education Act, as amended, that is used to identify students who need financial assistance to pay for higher education. To apply for federal financial aid, such as Pell Grants, students submit a Free Application for Federal Student Aid on which they report their own or both their own and their families' income and assets. Students who are financially dependent on their parents or other family members are required to report their own and their family's income and assets, while those who are financially independent report only their own income and assets (and their spouse's, if they are married).
