Chicken--both the bird and the food--has played multiple roles in the lives of African American women from the slavery era to the present. It has provided food and a source of income for their families, shaped a distinctive culture, and helped women define and exert themselves in racist and hostile environments. Psyche A. Williams-Forsen examines the complexity of black women's legacies using food as a form of cultural work. While acknowledging the negative interpretations of black culture associated with chicken imagery, Williams-Forsen focuses her analysis on the ways black women have forged their own self-definitions and relationships to the "gospel bird." Exploring material ranging from personal interviews to the comedy of Chris Rock, from commercial advertisements to the art of Kara Walker, and from cookbooks to literature, Williams-Forsen considers how black women arrive at degrees of self-definition and self-reliance using certain foods. She demonstrates how they defy conventional representations of blackness and exercise influence through food preparation and distribution. Understanding these complex relationships clarifies how present associations of blacks and chicken are rooted in a past that is fraught with both racism and agency. The traditions and practices of feminism, Williams-Forsen argues, are inherent in the foods women prepare and serve. *Building Houses out of Chicken Legs* Storey Publishing, LLC -- Covers the subject from land issues, through the entire construction process, all the way to plandng the lawn.-- Contains anecdotes, real life examples, diagrams, applicable political comment and special exposition on such subjects as basic electricity, Radon, energy saving, windows and much more.-- Written for the aspiring home owner, but is equally valuable to building professionals and real estate agents.

**So... You Want To Build a House** Atlantic Publishing Company

"I began building tiny houses back in 2009 when I built one for my mom. The house she was living in was starting to fall apart and become unlivable, so I knew I had to find her alternative housing. After researching various options I discovered the tiny house movement and realized that it was the perfect solution for her. A tiny house could be constructed to very high standards and still be affordable, plus it can be easily moved"--Author

*How to Build an Indian House'* focuses on one of Mumbai's and India's perennial and most daunting questions: mass housing. It documents, analyses and represents robust examples of different housing types in the city. Along with the documentary drawings and photographs, Sameep Padora developed a series of analytical models in order to understand spatial organization and infrastructure in residential building typologies.00This documentation is particularly pertinent today, given the critical need to address the issue of housing in India. Since this subject is of immense interest to professionals and students alike, the cases studied here range from residential typologies in Mumbai, such as the chawls (originally workers' housing that has morphed into vibrant communities), to more hybrid examples such as the Swadeshi Market, which demonstrates an interesting multiuse building. These Mumbai typologies challenge architects, planners and designers to test their imagination in thinking about affordable housing.00The present publication is a handbook for academics as well as practitioners: designers could use it to compare and discern efficiencies and various ratios that can inform the process of other design exercises.
