Excerpt from The House, a Manual of Rural Architecture, or How to Build Country Houses and Out-Buildings In this country everybody builds a house-perhaps several of them. Everybody, then, should know something about domestic architecture, in order to build to the best advantage-to secure the largest amount of convenience, comfort, and beauty in his dwelling which his means and materials will permit. It has been our object, in the preparation of this manual, to promote the diffusion of this needed knowledge among the people. The works of the lamented Downing, with all their acknowledged imperfections, have done much to enlighten the understandings and improve the tastes of our people on this subject. Much of the improvement which has taken place in the rural architecture of this country, within the last fifteen years, is due to their influence. But their size and cost have been a bar to their circulation, and confined their direct action upon the public mind within a comparatively narrow circle. The same remark will apply with more or less force to the excellent works of Calvert Vaux, Wheeler, Cleveland and Backus Brothers, and other recent architectural writers. We have aimed here at a wider, if not a stronger, influence. We have condensed into this little volume all that the great majority of readers will t. are to find in it, and all that they are prepared to

appreciate and profit by; and have placed the whole within the reach of every man in America who will ever have occasion to erect a house, a barn, a stable, or a piggery, by placing it at a price which no one will be too poor to pay. We aim, by these means, at a universal circulation and almost unlimited usefulness. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Log buildings are embedded deeply into North American history and culture. For more than one thousand years, builders have been weaving logs into homes, shelters, barns, and churches. Today, however, the buildings where we live and work are rarely handmade from natural materials. In this context, handcrafted, scribe-fitted natural log buildings are an attractive and uplifting alternative to conventional buildings and building materials. This book tells you what you need to know to build your own log home and also reveals the deep rhythms and patterns of log construction. Author Robert Chambers shows how to take naturally shaped, tapered, round logs and scribe-fit them one to another so that they look like they actually grew together in the woods. The Log Construction Manual is filled with information available nowhere else, including the Log Selection Rules, Chambers's brilliantly simple method for choosing which log to use next; instructions for building hip and valley log rafters and roof trusses from full-round logs; step-by-step directions for laying out the sill logs for virtually any floor plan, including hexagons, prowls, and more; state-of-the-art compression-fit saddle notches and underscribing to keep fits tight over time; details on scribing and cutting long grooves and corner notches just like the pros; and more. Chambers also offers advice on organizing and financing a log home project and has loads of experience to share on cutting costs and avoiding common pitfalls. He presents practical ideas for saving money and controlling costs. Although handcrafted log homes are expensive to buy, they are within reach for many as owner-managed building projects. Written concisely with great care in explaining important details, the Log Construction Manual brings clarity, insight, depth, and even humor to the log builder's craft. This is a comprehensive book for log home owner-builders, beginners as well as professionals.

More than 100,000 entrepreneurs rely on this book for detailed, step-by-step instructions on building successful, scalable, profitable startups. The National Science Foundation pays hundreds of startup teams each year to follow the process outlined in the book, and it's taught at Stanford, Berkeley, Columbia and more than 100 other leading universities worldwide. Why? The Startup Owner's Manual guides you, step-by-step, as you put the Customer Development process to work. This method was created by renowned Silicon Valley startup expert Steve Blank, co-creator with Eric Ries of the "Lean Startup" movement and tested and refined by him for more than a decade. This 608-page how-to guide includes over 100 charts, graphs, and diagrams, plus 77 valuable checklists that guide you as you drive your company toward profitability. It will help you:

- Avoid the 9 deadly sins that destroy startups' chances for success
- Use the Customer Development method to bring your business idea to life
- Incorporate the Business Model Canvas as the organizing principle for startup hypotheses
- Identify your customers and determine how to "get, keep and grow" customers profitably
- Compute how you'll drive your startup to repeatable, scalable profits.

The Startup Owner's Manual was originally published by K&S Ranch Publishing Inc. and is now available from Wiley. The cover, design, and content are the same as the prior release and should not be considered a new or updated product.
