An engine cradle is a steel frame that holds an engine in place during shipment. Select an engine cradle that is specifically designed for the make and model of your

engine. Bolt the cradle to the pallet, making sure that the cradle is centered. Lift the engine and fit it into the cradle. Using straps, secure the engine inside the cradle.

Engine Building Part 1: Blocks

Build is a first-person shooter engine created by Ken Silverman for 3D Realms. Like the Doom engine, the Build engine represents its world on a two-dimensional grid using closed 2D shapes called sectors, and uses simple flat objects called sprites to populate the world geometry with objects. The Build engine is generally considered to be a 2.5D engine since the basic world geometry is two-dimensional with an added height component, allowing each sector to have a different ceiling height and floor
