Selected Legal Papers Edward Elgar Publishing Domain Name Disputes provides practical and comprehensive analysis of domain name disputes resolved

by U.S. courts or by the ICANN cyber-arbitration system, With this handy reference, you'll find detailed discussions relating to cybersquatting claims, trademark infringement and dilution claims, property disputes and more. Domain Name Disputes also addresses numerous topics relevant to the ownership and use of domain names, such as: the legal status of domain names as "property" - the clash between trademark rights and free-speech rights - the ways a domain name owner may resist a cybersquatting claim - the ways a trademark owner may succeed against a "passive" cybersquatter

- the consequences of having a strong trademark as opposed to a weak one - the circumstances under which one's use of a domain name may subject its owner to the jurisdiction of a court in another state - the deference a U.S. court gives to an ICANN arbitration decision - the differences between a trademark infringement claim and a cybersquatting claim - and much more.

The Aubin Academy Master Series: Revit® MEP is the ideal book to help readers successfully use Revit MEP. It is a concise manual focused squarely on the rationale and practicality of the Revit MEP Building Information Model (BIM) process. The book emphasizes the process of creating projects in MEP

rather than a series of independent commands and tools. The goal of each lesson is to help the reader complete their projects successfully. Tools are introduced together in a focused process with a strong emphasis on “ why ” as well as “ how. ” The text and exercises seek to give the reader a clear sense of the value of the tools, and a clear indication of each tool's potential. The Aubin Academy Master Series: Revit MEP is a resource designed to shorten your learning curve, raise your comfort level, and, most importantly, give you real-life

tested practical advice on the usage of the software to create mechanical, electrical, and plumbing designs, and calculations. Empowered with the information within this book, you will have insight into how to use Revit MEP to create coordinated BIM project models and documentation. Revised and updated to the latest release of the software Includes practical project focused how-to exercises where readers learn by “ doing ” . Focused on MEP Production so readers can learn to create a coordinated BIM model and documentation set. Written by

authors with over 75 years of combined real-World architectural and MEP industry experience. Provides “ Power User/BIM Manager ” tips throughout. Includes free online download of complete dataset of project files to follow along in the exercises.

During the past decade, the rise of online communication has proven to be particularly fertile ground for academic exploration at the intersection of law and society. Scholars have considered how best to apply existing law to new technological problems but they also have returned to first principles, considering fundamental questions about what law is, how it is formed and its relation to cultural and technological change. This collection brings together many of these seminal works, which variously seek to interrogate

assumptions about the nature of communication, knowledge, invention, information, sovereignty, identity and community. From the use of metaphor in legal opinions about the internet, to the challenges posed by globalization and deterritorialization, to the potential utility of online governance models, to debates about copyright, free expression and privacy, this collection offers an invaluable introduction to cutting-edge ideas about law and society in an online era. In addition, the introductory essay both situates this work within the trajectory of law and society scholarship and summarizes the major fault lines in ongoing policy

debates about the regulation of online activity.

Maybe you're a great programmer or IT professional, but marketing isn't your thing. Or perhaps you're a tech-savvy search engine marketer who wants a peek under the

hood of a search engine optimized web site. Search engine marketing is a field where technology and marketing are both critical and interdependent, because small changes in the implementation of a web site can make you or break you in search engine rankings. Furthermore, the fusion of technology and marketing know-how can create web site features that attract more visitors. The mission of this book is to help web developers create web sites that rank well with the major search engines, and to teach search engine marketers how to use

technology to their advantage. We assert that neither marketing nor IT can exist in a vacuum, and it is essential that they not see themselves as opposing forces in an organization. They must work together. This book aims to educate both sides in that regard.

With reports from all major jurisdictions where the responsibility of facilitators and intermediaries for copyright and trade mark infringement have been litigated, this very useful

book is the first comprehensive global survey of the liability regime that intermediaries may face when assisting others to directly infringe copyright and trade mark rights, or when providing others with the means to do so. It addresses such issues as the following: ISP liability; contributory and secondary liability for trade mark, copyright, and patent infringement; time- and geo-shifting devices and services; consumer identification through dynamic IP addresses; infringements committed on a “commercial scale”; liability of hosting providers; requirements for a breach of duty of care; notice to users to refrain from infringements; filters and other

due diligence measures; “actual knowledge”; privacy and infringers’ personal data; file sharing services; online storage services; and liability of transporters and freighters. After a general introduction analysing relevant aspects of trade mark and copyright law, local experts provide detailed reports on positions in the EU (at the Community level), Germany, France, Italy, The United States, Japan, Korea, Australia, and New Zealand. As well as dealing with the issues, each report pays close attention to case law, legislative developments, and procedural issues of injunctive relief and damages. A final chapter covers comparative contributory patent

infringement. Along with the very practical value the book offers corporate counsel charged with IP rights litigation, the authors shed light on the fundamental issue of whether attempts to broaden liability in this area are compatible with established IP principles such as territoriality, freedom to operate, and freedom of competition. As a result, the book will be welcomed by a wide spectrum of lawyers and others working in this rapidly growing field, including practitioners, policymakers, academics, and jurists.

This casebook is the first to provide interdisciplinary

coverage of two exciting areas of the law: intellectual property and taxation. Valuable business assets are increasingly in the form of intangible assets such as patents, trade secrets, copyrights, trademarks, trade names, and computer software. Moreover, with the arrival of global, e-commerce transactions on the Internet, new forms of intellectual property, such as domain names and web contents, have emerged. The creation, development, acquisition, and sale and licensing of these intellectual property assets have significant tax consequences. Authors Maine and Nguyen adopt the problem method in addressing intellectual property taxation, and cover both

general and special tax principles governing different forms of intellectual property. The book's ten chapters are each devoted to the taxation of a major IP transaction such as intellectual property research and development, acquisitions, sales and licenses, and judgment awards and settlements. Every chapter contains a set of relevant problems, a summary of the black letter law, and excerpts of important cases and administrative pronouncements.

This comprehensive resource demonstrates how wireless sensor network (WSN) systems, a key element of the Internet of Things

(IoT), are designed and evaluated to solve problems associated with autonomous sensing systems. Functional blocks that form WSN-based systems are described, chapter by chapter, providing the reader with a progressive learning path through all aspects of designing remote sensing capabilities using a WSN-based system. The development and a full description of fundamental performance equations and technological solutions required by these real-time systems are included. This book explores the objectives and goals associated with tactical intelligence, surveillance, and reconnaissance (T-ISR) missions. Readers gain insight into the correlation

between fine-grained sensor resolution associated with WSN-based system complexities and the difficult requirements associated with T-ISR missions. The book demonstrates how to wield emergent technologies to arrive at reliable and robust wireless networking for T-ISR and associated tasks using low-cost, low-power persistent sensor nodes. WSN is broken down into constituent subsystems, key components, functional descriptions, and attendant mathematical descriptions. This resource explains how the design of each element can be approached and successfully integrated into a viable and responsive sensor system that is

autonomous, adaptable to mission objectives and environments, and deployable worldwide. It also provides examples of what not to do based on lessons learned from past (and current) systems that failed to provide end users with the required information. Chapters are linked together, in order of system assembly (concepts to operation), to provide the reader with a full toolset that can help deliver versatility in design decisions, solutions, and understanding of such systems, end to end.

Essential reference providing best practice of LTE-A, VoLTE, and IoT Design/deployment/Performance and evolution towards 5G This book is a practical guide to the design, deployment, and performance of LTE-A, VoLTE/IMS and IoT. A comprehensive practical performance analysis for VoLTE is conducted based on field measurement results from live LTE networks. Also, it provides a comprehensive introduction to IoT and 5G evolutions. Practical aspects and best

practice of LTE-A/IMS/VoLTE/IoT are presented. Practical aspects of LTE-Advanced features are presented. In addition, LTE/LTE-A network capacity dimensioning and analysis are demonstrated based on live LTE/LTE-A networks KPIs. A comprehensive foundation for 5G technologies is provided including massive MIMO, eMBB, URLLC, mMTC, NGCN and network slicing, cloudification, virtualization and SDN. Practical Guide to LTE-A,

VoLTE and IoT: Paving the Way Towards 5G can be used as a practical comprehensive guide for best practices in LTE/LTE-A/VoLTE/IoT design, deployment, performance analysis and network architecture and dimensioning. It offers tutorial introduction on LTE-A/IoT/5G networks, enabling the reader to use this advanced book without the need to refer to more introductory texts. Offers a complete overview of LTE and LTE-A, IMS, VoLTE and IoT and 5G Introduces readers to IP Multimedia Subsystems (IMS) Performs a comprehensive evaluation of VoLTE/CSFB Provides LTE/LTE-A network capacity and dimensioning Examines IoT and 5G evolutions towards a super connected world Introduce 3GPP NB-IoT evolution for low power wide area (LPWA) network Provide a comprehensive introduction for 5G evolution including eMBB, URLLC, mMTC, network slicing, cloudification, virtualization, SDN and orchestration Practical Guide to LTE-A, VoLTE and IoT will appeal to all deployment and service engineers, network designers, and planning and optimization engineers working in mobile communications. Also, it is a practical guide for R&D and standardization experts to evolve the LTE/LTE-A, VoLTE and IoT towards 5G evolution.

The Domain Game

Information Gatekeepers Inc
As the first form of truly rivalrous digital property, Internet domain names raise many challenges for law and policy makers. Analyzing the ways in which past disputes

have been decided by courts and arbitrators, Jacqueline Lipton offers a comprehensive, global examination of the legal, regulatory and policy issues that will shape the future of Internet domain name governance. This comprehensive examination of domain name disputes involving personal names and political and cultural issues sheds light on the need to balance trademark policy, free speech and other pressing interests such as privacy and personality rights. The author stresses that because domain names can only be registered to

one person at a time, they create problems of scarcity not raised by other forms of digital assets. Also discussed are the kinds of conflicts over domain names that are not effectively addressed by existing regulations, as well as possible regulatory reforms. Internet Domain Names, Trademarks and Free Speech brings pivotal new insights to bear in intellectual property and free speech discourse. As such, policymakers, scholars and students of intellectual property, cyber law, computer law, constitutional law, and e-commerce law will find it a

valuable resource.
