A Chronological Commentary of Revelation unveils what many people find to be mysterious about the last book of the Bible. Unlike most commentaries, though, it does so by reorganizing the biblical text so that it can be analyzed in chronological order. In so doing, the book is easy to read from beginning to end, almost like a story. This Commentary approaches Revelation from a basically literal point of view, i.e., the book is interpreted according to normal language. This does not mean that symbols aren't used, but when they are, their meaning is found somewhere in Scripture and not left as an exercise for the reader. Scripture interprets Scripture, and this book abounds with Scriptural references so that the reader can look up for him/herself how Revelation can be interpreted.

Programme management is becoming an increasingly important aspect of managing business change, whether within parts of an organisation, across the whole organisation or involving a group of organisations. The drivers for change may be internal, such as improving the quality of products, or external, such as new government policy. The second edition of this publication describes the OGC's approach for managing change effectively, based upon best practice experience within government and across the private sector. It provides an overview of the programme management framework, and considers key principles including leadership, benefits management, stakeholder management and communication, risk management, programme planning and control, business case management and quality management issues. It then goes on to discuss the programme management lifecycle including the identification and detailed definition of the programme, managing the project portfolio, delivery and realisation of measurable business benefits and the close-down of the programme and its infrastructure.

This groundbreaking text has been established as the market leader throughout the world. Profusely illustrated, Transmission Electron Microscopy: A Textbook for Materials Science provides the necessary instructions for successful hands-on application of this versatile materials characterization technique. For this first new edition in 12 years, many sections have been completely rewritten with all others revised and updated. The new edition also includes an extensive collection of questions for the student, providing approximately 800 self-assessment questions and over 400 questions that are suitable for homework assignment. Four-color illustrations throughout also enhance the new edition. Praise for the first edition:

'The best textbook for this audience available.' – American Scientist 'Ideally suited to the needs of a graduate level course. It is hard to imagine this book not fulfilling most of the requirements of a text for such a course.' – Microscope 'This book is written in such a comprehensive manner that it is understandable to all people who are trained in physical science and it will be useful both for the expert as well as the student.' – Micron 'The book answers nearly any question - be it instrumental, practical, or theoretical - either directly or with an appropriate reference...This book provides a basic, clear-cut presentation of how transmission electron microscopes should be used and of how this depends specifically on one's specific undergoing project.' – MRS Bulletin, May 1998 'The only complete text now available which includes all the remarkable advances made in the field of TEM in the past 30-40 years....The authors can be proud of an enormous task, very well done.' – from the Foreword by Professor Gareth Thomas, University of California, Berkeley *World Atlas of Mangroves* Springer Science & Business Media

How do international organizations expand into new areas or abandon programmes of work. Advocacy and Change in International Organizations argues that they do so not only at the collective direction of member states. Advocacy is a crucial but overlooked source of change in international organizations. Different actors can advocate for change: national diplomats, international bureaucrats, external experts, or civil society activists. They can use one of three advocacy strategies: social pressure, persuasion, and 'authority talk'. The success of each strategy depends on the presence of favourable conditions related to characteristics of advocates, targets, issues, and context. Institutionalization of new issues in international organizations as a multi-stage process, often accompanied by contestation. This book demonstrates how the advocacy-focused framework explains the origins of three workstreams of contemporary UN peacekeeping operations: communication, protection, and reconstruction. The issue of strategic communications was promoted by UN officials through the strategy of persuasion. Protection of civilians emerged due to a partially successful social influence campaign by a coalition of elected Security Council members and a subsequent (and successful) persuasion efforts by Canada. Quick impact projects entered

peacekeepers' practice as the result of 'authority talk' by an expert panel. The three issues illustrate the diversity of pathways to change in international organizations, representing the top-down, bottom-up, and outside-in pathways. Moreover, they have achieved different degrees of institutionalization in UN's policies, structures, and frameworks: protection of civilians is the most institutionalized, as evidenced by measures to hold peacekeepers accountable for non-implementation, while quick impact projects are the least institutionalized.

The science of climate change is a complex subject that balances the physical record and scientific fact with politics, policy, and ethics - and is of particular importance to the geosciences. This thoughtfully crafted new text and accompanying media encourage non-science majors to practice critical thinking, analysis, and discourse about climate change themes. Taking a cross-disciplinary approach, acclaimed educator and researcher, David Kitchen, examines not only the physical science, but the social, economic, political, energy, and environmental issues surrounding climate change. His goal: to turn knowledge into action, equipping students with the knowledge and critical skills to make informed decisions, separate facts from fiction, and participate in the public debate. *PC Mag* Oxford University Press

The immense process of economic and social transformation currently underway in China and Vietnam is well known and extensively documented. However, less attention has been devoted to the process of Chinese and Vietnamese legal change which is nonetheless critical for the future politics, society and economy of these two countries. In a unique comparative approach that brings together indigenous and international experts, Asian Socialism and Legal Change analyzes recent developments in the legal sphere in China and Vietnam. This book presents the diversity and dynamism of this process in China and Vietnam-the impact of socialism, constitutionalism and Confucianism on legal development; responses to change among enterprises and educational and legal institutions; conflicts between change led centrally and locally; and international influences on domestic legal institutions. Core socialist ideas continue to shape society, but have been adapted to local contexts and needs, in some areas more radically than in others. This book is the first systematic analysis of legal change in transitional economies.

Introduction to Quantitative EEG and Neurofeedback, Third Edition offers a window into brain physiology and function via computer and statistical analyses, suggesting innovative approaches to the improvement of attention, anxiety, mood and behavior. Resources for understanding what QEEG and neurofeedback are, how they are used, and to what disorders and patients they can be applied are scarce, hence this volume serves as an ideal tool for clinical researchers and practicing clinicians. Sections cover advancements (including Microcurrent Electrical Stimulation, photobiomodulation), new applications (e.g. Asperger's, music therapy, LORETA, etc.), and combinations of prior approaches. New chapters on smart-phone technologies and mindfulness highlight their clinical relevance. Written by top scholars in the field, this book offers both the breadth needed for an introductory scholar and the depth desired by a clinical professional. - Covers neurofeedback use in depression, ADHD, addiction, pain, PTSD, and more - Discusses the use of adjunct modalities in neurotherapy - Features topics relevant to the knowledge blueprints for both the International QEEG Certification Board and International Board of Quantitative Electrophysiology - Includes new chapters on photobiomodulation, smart-phone applications and mindfulness

Whether you are using Windows Forms to build rich-client business applications, or the ASP.NET 2.0 framework to build powerful web applications or web services, the use of well-designed graphics will greatly enhance their usability, impact, and visual appeal. This book provides a comprehensive guide to the use of graphics in .NET applications and aims to provide you with all the information you need to build effective custom controls. The opening section of the book investigates the .NET Framework classes that implement graphics. It covers all of the classes, methods, and techniques needed to create, manipulate, and display precise graphics in a form, a page being sent to a printer, or an image. On this foundation, the second section describes how to design and build effective custom controls for use in a business environment. Topics covered include building composite controls, implementing keyboard navigation, and enhancing design-time support. The final section of the book explores the use of GDI+ and ASP.NET to build custom controls that can provide reusable, GUI components for web projects, and to deliver customized graphics over the Internet.

Nuclear cardiac imaging refers to cardiac radiological diagnostic techniques performed with the aid of radiopharmaceuticals, which are perfused into the myocardium as markers. These imaging studies provide a wide range of information about the heart, including the contractility of the heart, the amount of blood supply to the heart and whether parts of the heart muscle are alive or dead. This is essential information for cardiologists, and nuclear imaging has become an increasingly important part of the cardiologist's armamentarium. Chapters in Nuclear Cardiac Imaging cover historical, technical and physiological considerations, diagnosis and prognosis, conditions other than Coronary Artery Disease (CAD), advanced cardiac imaging, and challenges and opportunities. New to the fifth edition are key point summaries at the start of each chapter, clinical cases with videos, and a question and answer chapter on practical issues. This volume is ideal for nuclear cardiologists in training and nuclear clinicians alike who are searching for quick answers to important clinical and technical questions.

*A Chronological Commentary of Revelation* Springer Science & Business Media

In the myth of Daphne and Apollo, Cupid fired two arrows: one causing flight from love, the other passionate attraction. Cupid aimed his first arrow at Daphne, a beautiful nymph who loved her freedom; the next struck Apollo, who lusted after Daphne. Daphne, frightened and intent upon virginity, fled Apollo but was unable to run fast enough. When her strength was almost gone, she sought protection in the familiar waters of her father's river. He answered her prayers: Her hair became leaves, and her feet, roots growing into the ground; she was transformed into a laurel tree. Apollo, kissing the sprouting bark, pledged to honor Daphne by placing a laurel wreath on the head of every hero who won a victory. Unable to evade the consequences of the arrow that wounded her, Daphne called upon the river, the creative power of both nature and time—a symbol of fertility, but also of oblivion—to help her survive when her strength was gone. Daphne's inner triumph in the face of injury is an appropriate symbol for the types of transformation witnessed by psychologists. In his book on symbols, Circlot (1962, p. 173) writes that the crowning of the poet, artist, or conqueror with laurel leaves "presupposes a series of inner victories over the negative and dissipative influence of the basest forces." Further, the tree "denotes the life of the cosmos: its consistence, growth, proliferation, generative, and regenerative processes" (Circlot, 1962, p. 328).
