Healthcare providers, consumers, researchers and policy makers are inundated with unmanageable amounts of information, including evidence from healthcare research. It has become impossible for all to have the time and resources to find, appraise and interpret this evidence and incorporate it into healthcare decisions. Cochrane Reviews respond to this challenge by identifying, appraising and synthesizing

research-based evidence and presenting it in a standardized format, published in The Cochrane Library (www.thecochranelibrary.com). The Cochrane Handbook for Systematic Reviews of Interventions contains methodological guidance for the preparation and maintenance of Cochrane intervention reviews. Written in a clear and accessible format, it is the essential manual for all those preparing, maintaining and reading Cochrane reviews. Many of the principles and methods described here are appropriate for systematic reviews applied to other types of research and to systematic reviews of interventions undertaken by others. It is hoped therefore that this

book will be invaluable to all those who want to understand the role of systematic reviews, critically appraise published reviews or perform reviews themselves.

This book reflects and analyses the working of power in the field of global health— and what this goes on to produce. In so doing, Rethinking Global Health asks the pivotal questions of, ‘who is global health for’ and ‘what is it that limits our ability to build responses that meet people where they are?’

Covering a wide range of topics from global mental health to Ebola, this book combines power analyses with interviews and personal reflections spanning the author’s decade-long career in global health. It interrogates how the search for global solutions can often end up far from where we anticipated. It also introduces readers to different frameworks for power analyses in the field, including an adaptation of the ‘matrix of domination’ for global health practice. Through this work, Dr Burgess develops a new model of Transformative Global Health, a framework that calls researchers and practitioners to adopt new orienting principles, placing community interests and voices at the heart of global health planning and solutions at all times. This book will be beneficial to students and academics working in the global and public health landscape. It will also hold appeal to activists, practitioners and individuals invested in the discipline and in health equity around the world.

bookdown: Authoring Books and Technical Documents with R Markdown presents a much easier way to write books and technical publications than traditional tools such as LaTeX and Word. The bookdown package inherits the simplicity of syntax and flexibility for data analysis from R Markdown, and extends R Markdown for technical writing, so that you can make better use of document elements such as figures, tables, equations, theorems, citations, and references. Similar to

LaTeX, you can number and cross-reference these elements with bookdown. Your document can even include live examples so readers can interact with them while reading the book. The book can be rendered to multiple output formats, including LaTeX/PDF, HTML, EPUB, and Word, thus making it easy to put your documents online. The style and theme of these output formats can be customized. We used books and R primarily for examples in this book, but bookdown is not only for books or R. Most features introduced in this book also apply to other types of publications: journal papers, reports, dissertations, course handouts, study notes, and even novels. You do not have to use R, either. Other choices of computing languages include Python, C, C++, SQL, Bash, Stan, JavaScript, and so on, although R is best supported. You can also leave out computing,

for example, to write a fiction. This book itself is an example of publishing with bookdown and R Markdown, and its source is fully available on GitHub.
