Suggestions to Medical Authors and A.M.A. Style Book CSIS Verification in an Age of Insecurity takes the reader into some of the most urgent arms control issues facing the world community, including the nuclear activities of rogue states and threats from sophisticated non-state actors. In the book, national security expert Philip D. O'Neill, Jr. identifies and addresses issues from the resuscitated disarmament agenda, from the comprehensive test ban to fissile material and biological weapons. O'Neill examines the need for shifts in verification standards and policy suitable for our volatile era and beyond it. He surveys recent history to show how established verification procedures fail to produce the certainty necessary to meet today's threats. Verification in an Age of Insecurity goes beyond a discussion of rogue states like North Korea to offer suggestions on how best to bring compliance policy up to date with modern threats. The United States faces hard choices in dealing with a war that has spread

from Afghanistan into Pakistan. Any effective counterinsurgency strategy in Afghanistan must rely on building up strong Afghan security forces at the local level and using them to defeat the enemy and create the security requisite for governance and development. This up-to-date analysis describes in detail the continued development of the Afghan National Security Forces (ANSF): the historic challenges—and missed opportunities—they have faced; their strengths and weaknesses; and the prospects for future force development. The report examines the progress ANSF forces are making in the broader context of the ideological, civil, military, and economic conflict that affects both Afghanistan and Pakistan, and it explains how the lack of troops and effective local training programs have made it possible for the Taliban, Hekmatyer, and Haqqani networks to gain strength and expand their capabilities. Both the Afghan National Army (ANA) and the Afghan National Police (ANP) must improve dramatically in size and capability before they can take the lead in

Afghan security. The report details what improvements in force size and quality are realistic in the near term as well as what challenges stand in the way of the proposed near-doubling of the size of the ANSF. The logistical, financial, and training challenges of making ANA units capable of operating independently receive particular emphasis. The United States, say the authors, is the only country with the resources to change this situation. It has failed to do so, however, by not providing the money, mentors, and training personnel or the kind of partners in the field necessary to create the scale and quality of Afghan forces needed. If the Obama administration does not act quickly and decisively to reverse the situation, Afghanistan, NATO/ISAF, and the United States may well lose this war. Presidential election. The Plum Book is used to identify Presidential appointed and other positions within the Federal Government. The publication lists over 9,000 Federal civil service leadership and support positions in the legislative and executive branches of the Federal Government that may be subject to noncompetitive appointment. The duties of many such positions may involve advocacy of Administration policies and programs and the incumbents usually have a close and confidential working relationship with the agency head or other key officials. The Plum Book was first published in 1952 during the Eisenhower administration. When President Eisenhower took office, the Republican Party requested a list of government positions that President Eisenhower could fill. The next edition of the Plum Book appeared in 1960 and has since been published every four years, just after the Presidential election. A Manual for Writers of

Privacy is one of the most urgent issues associated with information technology and digital media. This book claims that what people really care about when they complain and protest that privacy has been violated is not the act of sharing information itself—most people understand that this is crucial to social life—but the inappropriate, improper sharing of information. Arguing that privacy concerns should not be limited solely to concern about control over personal information, Helen Nissenbaum counters that information ought to be distributed and protected according to norms governing distinct social contexts—whether it be workplace, health care, schools, or among family and friends. She warns that basic distinctions between public and private, informing many current privacy policies, in fact obscure

more than they clarify. In truth, contemporary information systems should alarm us only when they function without regard for social norms and values, and thereby weaken the fabric of social life.
